There are only two ultimate questions in this case. The first is whether the court below properly set aside the reduced rates prescribed by the Commission's findings and order because they are "too low" (*Federal Power Commission v. Natural Gas Pipeline Company of America*, 315 U. S. 575, 585). The second is whether the court below also properly set aside the Commission's retroactive findings as to the lawfulness of past rates because they are not "within the ambit" of the Commission's statutory authority (315 U. S., 586). These two questions are stated by the petitioners as Nos. 7, 8 and 9.

All other questions are subsidiary to the first. Whether the rates are too low depends upon a proper determination of rate base, operating expenses and rate of return. Petitioners state some of these subsidiary issues in their questions Nos. 1 through 6, but only those as to which they believe the court below erred.

The court below properly set aside the Commission's rate action if "as applied to the facts before it and viewed in its entirety" it produced an "arbitrary result" (315 U.

---

[2] These abbreviations refer to the Brief for Petitioners in No. 34 and the Brief of Petitioner in No. 35, respectively. The references thereto under the headings of this brief show where the petitioners discuss the respective subjects here discussed.

S., 586). Accordingly it is necessary to discuss, as we do in this brief, not only the subsidiary questions mentioned by the petitioners, but also the several determinations by the court below supporting its final judgment which are not here challenged by the petitioners and the several other important grounds upon which that judgment can properly rest.

We can not accept the statement in the Commission's brief (p. 2) that the Commission used a "prudent investment" rate base and the resulting implication that it used a prudent investment method of rate making. As we point out in this brief, it used a rate base and method of rate making which viewed in their entirety are arbitrary and unreasonable and produced too low a rate whether tested by the fair value method, or by the prudent investment method, or by any other general standard of reasonableness.

## STATEMENT.

*(Com. Brief, 4-15; Cleve. Brief, 9-19)*

We supplement the statements made in the petitioners' briefs as follows:

### 1. Hope's Business and Properties.

Hope was organized in 1898 under West Virginia laws. Its business is now, and always its principal business has been, the production, purchase, transmission and marketing of natural gas in that state (Ex. 4, R. I, 107-111). The division of its annual sales between local sales in West Virginia and sales of gas exported from West Virginia is indicated in the following table in thousands of cubic feet, abbreviated as M.c.f. (Ex. 2, 2; Ex. 2B, 3[3]):

---

[3] In accordance with Rule 10 of the Circuit Court of Appeals for the Fourth Circuit the parties below printed as supplements or appendices to their briefs only such parts of the record as they

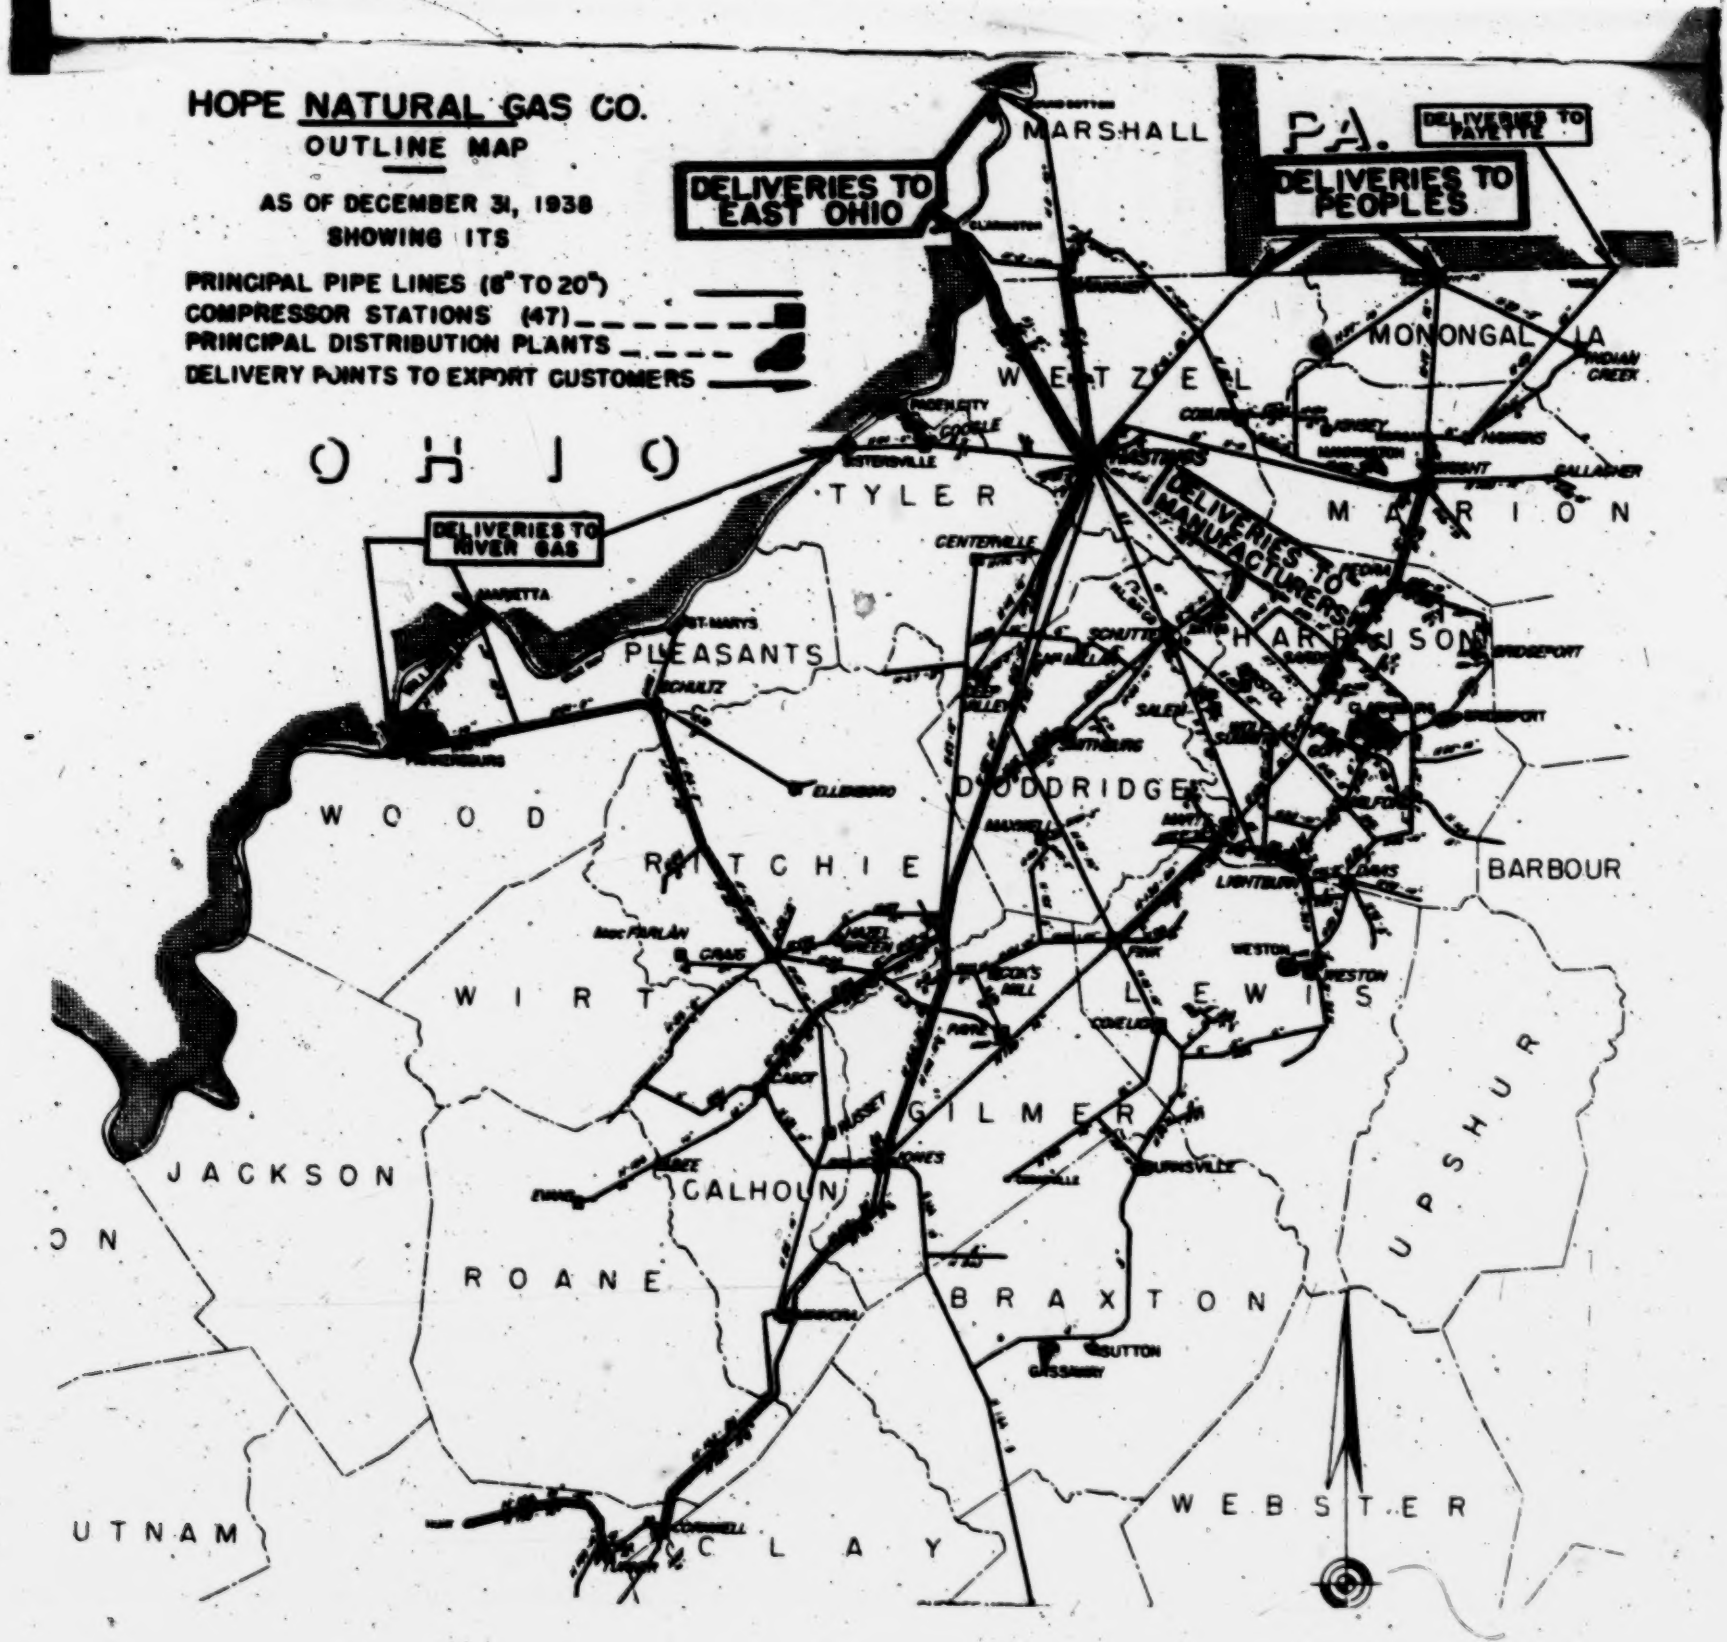
| Total Gas Sales | 55,712,698 | 46,876,155 | 51,083,552 | 64,927,677 |



* Excluding sales from former Reserve Gas Company properties, see *infra*, p. 19.

All five of the export customer companies receive delivery of gas at or near the northern West Virginia state line. The East Ohio Gas Company, The Peoples Natural Gas Company and The River Gas Company, like Hope, are subsidiaries of Standard Oil Company (New Jersey). Fayette County Gas Company and The Manufacturers Light and Heat Company are not. The names of these companies are hereinafter abbreviated as in the foregoing table.

East Ohio distributes the gas purchased from Hope in the northern and eastern parts of Ohio—Cleveland, Akron, Canton, Massillon and Youngstown being the principal cities. River distributes in Marietta, Ohio, but the sales to it are insignificant and since the rates to it were not affected by the Commission's orders no further reference to it will be made. Peoples, Fayette and Manufacturers distribute the gas purchased from Hope in various communities in Pennsylvania, of which Pittsburgh, served in

part by Peoples, is the largest. All of the purchasing companies have local and other supplies of gas. The domestic and commercial consumers on the Hope-East Ohio-Peoples systems totaled almost 710,000 in 1940. (Ex. 4, R. I, 118-126; Ex. 2B, 4).

Between pages 4 and 5 of this brief appears a map showing Hope's principal pipe lines, compressor stations and delivery points to its export customers, taken from Exs. 1 and 1A appearing at R. III, opposite 33. The thousands of small gathering lines and the extensive gas producing fields are not indicated on this map. An idea of the extent of Hope's properties can be gained from the following statistics for 1938 (Ex. 2, 1, 3A; Ex. 4, R. I, 110-111):

| | Total Mileage | 3 Inch Equivalent Mileage[4] |
|---|---|---|
| Field and Transmission Lines | 4,024 | 9,545 |
| Distribution Lines | 892 | 929 |
| Number of Compressor Stations | 47 Stations | |
| Total Compressor Station Horsepower | 93,470 Horsepower | |
| Number of Gas Wells Owned | 3,302 Wells | |
| Number of Vendors' Gas Wells | 12,600 Wells | |
| Number of Gas Purchase Contracts | 340 Contracts | |
| Operated Leasehold Acreage Owned | 337,790 Acres | |
| Unoperated Leasehold Acreage Owned | 647,180 Acres | |

A full description of Hope's properties, their history and their method of operation as testified to by Mr. Tonkin, Hope's President, is contained in Exhibit 4 and related exhibits, important parts of which are printed at R. I, 103-142.

---

[4] Mileage of pipe of all sizes expressed in terms of equivalent amount of pipe of 3" diameter, for instance 1 mile of 6" pipe being equivalent to 2 miles of 3" pipe.

**2. Hope's Rate History.**

Because of constant reiteration by petitioners to the effect that Hope has "recouped" a large part of the cost of its properties from the public (Com. Brief, 3, 18, 71, 74, 78-85; Cleve. Brief, 8, 20, 40, 42, 44, 53) it is necessary to say something about the rate history of Hope and of its largest customer, East Ohio. Both companies were organized in 1898 by the same interests, the one to be primarily a producing company in West Virginia and the other to be a distributing company in Ohio (Ex. 4, R. I, 123). Gas rates in Ohio in 1898, as now, were fixed by ordinances passed by municipal councils. If these ordinances were accepted by the utility they became a contract for the period fixed in the ordinance not exceeding ten years. (Ohio General Code, Sections 3982, 3983). After the passage of the Ohio Public Service Commission Act in 1911 a utility dissatisfied with an ordinance rate had the right to appeal to The Public Utilities Commission from the rates fixed by Council (Ohio General Code, Sections 614-44 *et seq.*).

In 1898 East Ohio procured its first franchise from the City of Akron. The ordinance granting this franchise provided a rate of 25¢ per M.c.f. for the first 5 years and 30¢ for the succeeding 5 years. This ordinance was accepted by East Ohio and fixed the rate up to 1908. *The East Ohio Gas Company v. The City of Akron*, 81 O. S. 33, 90 N. E. 40 (1909).

In 1902 East Ohio accepted a franchise from the City of Cleveland which fixed a rate of 30¢ per M.c.f. for a period of 10 years. In 1911 a new ordinance was passed by Cleveland and accepted by East Ohio continuing the rate of 30¢ per M.c.f. for 8 years and increasing it to 35¢ per M.c.f. for the last two years. This ordinance by its terms expired February 6, 1921. *State ex rel. The City of Cleveland v. Court of Appeals*, 104 O. S. 96, 135 N. E. 377 (1922).

The rate charged by Hope to East Ohio prior to 1910 does not appear from the record or decided cases. Ex-

hibit 5 shows that beginning March 1, 1910 the rate for gas furnished by Hope to East Ohio was fixed at 50% of the amount paid by East Ohio's domestic consumers, provided that this should not be less than 15¢ per M.c.f. prior to May 31, 1918 and not less than 17½¢ for 2 years thereafter. It thus directly reflected the terms of the Cleveland ordinance.

Thus until the early 1920's East Ohio's rates were fixed by contract for periods of ten years in advance and Hope's rates to East Ohio were similarly fixed. Following the large depletion of Hope's fields by World War I and the increased costs of operation that occurred after that period, Hope's rates to East Ohio and East Ohio's rates in Cleveland were substantially increased to approximately present levels as a result of the litigation reported in the case last above cited (Ex. 5, 24).

In 1931 Cleveland passed an ordinance reducing East Ohio's rates which, on appeal, the Ohio Commission sustained. *East Ohio Gas Company v. City of Cleveland*, 4 P. U. R. (N. S.) 433 (1934). Hope agreed to absorb a part of this rate reduction and reduced its net rate to East Ohio to 38.5¢ (Ex. 5, 24). In 1937 a provision for a discount on gas purchased by East Ohio for resale to large industrial consumers in order to enable East Ohio to sell industrial gas in competition with other fuels reduced Hope's average rate to East Ohio to 36.5¢ (Ex. 5, 28).

Since 1937 to the effective date of the Commission's rate reducing order the average rates collected by Hope from its export business were as follows (Ex. 11, 5; Ex. 37, 17, 45):

| From | Per M.c.f. |
|---|---|
| East Ohio | 36.5¢ |
| Peoples | 35.5¢ |
| River | 35.0¢ |
| Fayette | 31.5¢ |
| Manufacturers | 31.5¢ |
| Average | 35.9¢ |

Differences in the terms and conditions of these various contracts accounting for the differences in prices were fully explained by Mr. Tonkin (Ex. 4, R. I, 112-118).

These export rates have enabled Peoples in Pittsburgh and East Ohio in Cleveland to maintain the lowest domestic natural gas rates in force in any of the 25 largest cities in the United States (Ex. 25, 5; Ex. 50, Table 1).[5]

Nevertheless the Cities of Cleveland and Akron, Ohio, petitioners herein, have attempted to secure still lower rates. In 1932 Akron and in 1937 Cleveland passed rate ordinances prescribing lower rates for East Ohio than those then in force. These being appealed to the Ohio Commission it, among other matters, investigated Hope's interstate rates to East Ohio in great detail and in both cases sustained them as reasonable. Its findings in these respects were substantially sustained by the Ohio Supreme Court in the *Akron* case and completely sustained by that court in the more recent *Cleveland* case. *Akron* case—*Re East Ohio Gas Company*, 17 P. U. R. (N. S.) 433 (1937);

---

[5] These exhibits show the following monthly bills, for 16 of the 25 largest cities, resulting from the normal use of natural gas amounting to 37 therms for cooking, water heating and refrigeration. The remainder of the 25 largest cities have manufactured gas at substantially higher rates.

| | Monthly Bill |
|---|---|
| Pittsburgh, Pa. | $1.93 |
| Cleveland, Ohio | 2.47 |
| Louisville, Ky. | 2.50 |
| San Francisco, Calif. | 2.51 |
| Los Angeles, Calif. | 2.52 |
| Buffalo, N. Y. | 2.67 (Mixed Gas) |
| Houston, Texas | 2.91 |
| Cincinnati, Ohio | 2.92 (Mixed Gas) |
| Kansas City, Mo. | 3.51 |
| New Orleans, La. | 3.72 |
| Denver, Colo. | 4.11 |
| Detroit, Mich. | 4.24 |
| Washington, D. C. | 4.72 (Mixed gas) |
| St. Louis, Mo. | 4.97 (Mixed Gas) |
| Minneapolis, Minn. | 5.07 (Mixed Gas) |
| Chicago, Ill. | 5.46 (Mixed Gas) |

*The East Ohio Gas Company v. The Public Utilities Commission of Ohio, etc.*, 133 O. S. 212, 12 N. E. (2d) 765 (1938). *Cleveland* case—*East Ohio Gas Company v. City of Cleveland*, 27 P. U. R. (N. S.) 387 (1939); *The East Ohio Gas Co. v. Public Utilities Commission of Ohio, City of Cleveland v. Public Utilities Commission (2 cases)*; 137 O. S. 225, 28 N. E. (2d) 599 (1940); see Exhibits A and C to Cleveland's "Supplement to Petition and Complaint as Amended" filed in Docket No. G-100 herein on March 10, 1939.

While, therefore, Hope's export rates have never been directly subject to regulation, nevertheless their reasonableness was before the Ohio courts in 1921 and before the Ohio Commission and courts in 1931, 1932, 1937 and now again since 1939. In all of these cases the investigations by these bodies of Hope's properties and operations were as complete as in the case of East Ohio.

The *East Ohio-Cleveland* cases presently pending before the Ohio Commission, frequently referred to in Cleveland's brief (pp. 2, 13, 63) and the Commission's brief (pp. 8, 110-111), arose out of the fact that effective July 1, 1939 Cleveland passed a new ordinance fixing precisely the same rate for natural gas in Cleveland that the Ohio Commission had declared in its order of January 10, 1939 was 13¢ per M.c.f. too low, a holding that was sustained by the Ohio Supreme Court in the last *Cleveland* case above cited.

**3. Hope's Financial History.**

The repeated statement in the Commission's brief that "the average annual yield on the average annual amount of Hope's capital stock issued for cash or other assets has exceeded 20%" (Com. Brief, 5, 26), is mathematically correct, but wholly misrepresents the true picture. This computation ignores these facts: Hope paid no dividends for the first ten years of its history and put all of its earnings back into the development of its property (Ex. 81, R. III,

13). In that development it was assisted by an associated company that at one time advanced as much as $6,265,000 on open account to enable Hope to make this development (Ex. 81, R. III, 16). Thus the total capital stock issued for the first ten years of Hope's history was only $500,000 although by the end of that time, with advances and earnings put back, it had fixed assets of more than $10,000,000 (Ex. 81, R. III, 16). In 1908 these advances were liquidated when Standard Oil Company purchased $4,500,000 additional stock for cash and at the same time a $5,000,000 stock dividend was declared (Ex. 81, R. III, 13). In any realistic view this stock dividend, representing ten years of earnings on cash capital and cash advances which earnings were reinvested in the business, was issued for cash although the Commission did not so treat it in this computation.

Thus the average annual amount of Hope's capital stock formally issued for cash ($11,328,133 per Ex. 81, R. III, 15, note) is not in any sense a fair base upon which to predicate a percentum of either earnings or yield. In addition, the 20% computation includes in the earnings out of which dividends were paid almost $40,000,000 of net earnings that came from sources other than Hope's natural gas service (Ex. 81, R. III, opp. 17, cols. (c), (k) and (l)).

A more accurate measure of Hope's financial history so far as it has any bearing on rates is, we suggest, its history beginning with 1926.

During the first two decades of its existence Hope had available to it the flush production from the theretofore untapped gas fields of northern West Virginia. It sold enormous quantities of gas at low costs and low prices. A large part of these low cost sales were for industrial, field and other uses of a wholly non-utility character. In the period from 1904 to 1909 its sales ranged from slightly less than 31 million M.c.f. to about 45 million M.c.f. From that time until 1916 its sales were never less than 64 million M.c.f. and in many years larger. In 1916, 1917 and 1918 it

was forced to meet enormous demands upon its system occasioned by World War I, its sales in 1916 being over 102 million M.c.f. (Ex. 2, 2). During this period Hope's earnings steadily increased, reaching $5,221,000 in 1916 (Ex. 81, R. III, opp. 17, col. (j)).

During this period Hope met these demands largely from its own producing fields. As a result of this World War I depletion of its gas reserves Hope was required to extend its system southward after the war even in the face of greatly declining demands. Finally in 1925 it built a long transmission line to southern West Virginia where it could procure additional supplies from producers who had theretofore engaged in the manufacture of carbon black. (Ex. 4, 55-61; Ex. 3A). 1926 was thus the first year of full operation of this extended property and of Hope's greater dependence upon purchased gas.

Since 1925 Hope's sales, revenues and earnings have fluctuated widely each year, depending upon winter weather conditions, industrial activity, the extent of local gas supplies available to its customer companies in Ohio and Pennsylvania, the extent to which it was called upon to meet winter loads from its own gas reserves and other factors (Ex. 4, 61-65).

The following table summarizes its operations:

| Year. | Fixed Assets Per Books[4] | Hope's Total Sales Per Books | | Depreciation and Depletion Per Books[9] | Hope Net Operating Gas Income Per Books[10] | Col. (5 |
|---|---|---|---|---|---|---|
| | | M.c.f.[7] | Revenue[8] | | | |
| (1) | (2) | (3) | (4) | (5) | (6) | |
| | | | (Thousands Omitted) | | | |
| 1926 | $ 47,164 | 57,156 | $ 20,662 | $ 2,872 | $ 3,479 | $ |
| 1927 | 48,762 | 52,433 | 19,363 | 2,809 | 1,535 | |
| 1928 | 48,548 | 55,081 | 20,635 | 2,651 | 2,393 | |
| 1929 | 52,193 | 57,444 | 22,048 | 2,660 | 3,234 | |
| 1930 | 53,009 | 52,649 | 19,931 | 2,677 | 1,188 | |

| 1932 | 52,412 | 37,702 | 14,206 | 2,329 | (805) Loss | |
| 1933 | 52,191 | 37,080 | 14,121 | 1,998 | 366 | |
| 1934 | 54,454 | 43,535 | 15,986 | 1,693 | 1,041 | |
| 1935 | 54,312 | 47,133 | 16,976 | 1,846 | 2,279 | |
| 1936 | 56,106 | 55,679 | 20,139 | 2,013 | 3,555 | |
| 1937 | 56,536 | 58,911 | 20,366 | 1,982 | 2,368 | |
| 1938 | 56,650 | 47,921 | 16,942 | 4,663 | 872 | |
| 1939 | 64,251 | 51,344 | 18,119 | 1,218 | 2,283 | |
| 1940 | 65,193 | 69,056 | 24,362 | 1,464 | 5,337 | |
| Total | $814,560 | 770,849 | $281,849 | $32,435 | $29,824 | $ |
| Average | $ 54,304 | 51,390 | $ 18,790 | $ 2,162 | $ 1,988 | $ |

[4] From Ex. 81, R. III, 16, Col. (b). Fixed Assets for 1939 and 1940 include former Reserve Gas Company properties. Other columns include operations of former Reserve Gas Company only.

[7] From Ex. 2, 2 and 2B, 3, R. III, 307.

[8] From Ex. 81, R. III, opp. 17, Col. (b).

[9] From Ex. 81, R. III, opp. 17, Col. (h).

[10] From Ex. 81, R. III, opp. 17, Col. (j).

The figures above include Hope's distribution business, as do all general financial figures used by the Commission. In column (2) is given the fixed assets relating to the natural gas business which average over $54 million. Column (7) represents the net operating gas income before any deduction for depreciation and depletion and averages $4.1 million per annum. In examining Hope's book figures it is necessary to show the combined earnings available for return, depreciation and depletion because of Hope's depreciation policy. That policy was never an attempt to provide for merely the annual depreciation and depletion of the property. Hope's Treasurer, Mr. Chisler, explained that the amounts annually set aside were determined by ascertaining the amount of money needed for current property replacements and the additional amounts which it was

deemed advisable to reserve from earnings to pay for needed improvements (Chisler, R. II, 399-400). As Mr. Chisler said:

> "Well, the whole plan was to keep enough money from revenues, from earnings, to develop the property with." (R. II, 399.)

This policy, of course, explains Hope's large depreciation reserves and its low capitalization. It was a conservative policy that harmed no one and kept available money to make replacements at current price levels and necessary extensions.

Taking these fifteen years Hope's total operating gas income available for return, depreciation and depletion of $4.1 million on fixed assets which we know from this record were substantially understated on the books at $54 million cannot be distorted into a showing of excessive or even adequate earnings.

**4. Proceedings Before the Commission.**

In addition to the parties referred to in the petitioners' briefs, the State of West Virginia and The Public Service Commission of West Virginia were permitted to intervene in the consolidated proceedings before the Commission by order dated April 2, 1940 and the City of Toledo, Ohio, was permitted to intervene in the investigatory proceedings by order dated May 28, 1940. The State of West Virginia subsequently filed a brief opposing the recommendations of the Commission's Staff as being contrary to the interests of West Virginia in tax revenues from utility property and in the securing of reasonable prices for the production and sale for export of an irreplaceable West Virginia natural resource.

The hearings referred to were before a Trial Examiner, and not before the Commission itself.[11]

Hope, being required by the Commission to proceed first with its testimony (R. II, 36), presented all of the evidence which this Court has heretofore held relevant for rate-making purposes and rate base determinations—data as to the dates of the construction of its property and as to changes in price levels, book cost, original cost, reproduction cost and the accrued depreciation in its properties, as well as data on operating expenses for 1937 through 1940 and on rate of return.

The complainants, Cleveland, Akron and the Pennsylvania Public Utility Commission, presented no evidence on rate base or anything else.

The Commission's Staff presented no evidence as to the present value of Hope's properties, but introduced figures showing a rate base consisting of an adjusted book cost of Hope's properties, less a recomputed depreciation

---

[11] Hope's application to the Commission for a copy of the Examiner's report in order that it might be apprised of the Government's claims and file exceptions and objections to the report was denied (Order, October 3, 1941). The Commission failed to include the Examiner's report in the certified transcript of the record which it filed with the Circuit Court of Appeals, although inclusion of the report was specifically requested by Hope (Petition for Review, R. IV, 12). In view of the scope of the exhibits and the length of the hearings before the Trial Examiner this case was peculiarly one where the Commission should have followed the practice as to Examiner's reports recommended to insure a fair hearing in *Morgan vs. United States*, 298 U. S. 468, 304 U. S. 1. All other important federal regulatory bodies follow this practice: *Bituminous Coal Division, Department of Interior* (Rule XXIV); *Civil Aeronautics Board* (Rule 5); *Federal Communications Commission* (Commission's proposed findings served on all parties, Rule 1.231 (f) and (g)); *Federal Trade Commission* (Rules XX and XXI); *Food and Drug Administration, Federal Security Agency* (Proposed order issued, Rules of Practice, Sec. 2.712); *Interstate Commerce Commission* (Rules 95 and 96); *National Labor Relations Board* (Rules, Art. II, Secs. 32 and 33); *Public Contracts Division, Department of Labor* (Rules, Part I, Secs. IX and X); *Railroad Retirement Board* (Regulations, Sec. 250.15); *Securities and Exchange Commission* (Rules IX and X).

reserve, plus unoperated leases at book cost, and working capital. It also introduced data as to Hope's operating expenses and statistical data as to rate of return.

A complete list of the exhibits presented by Hope and by the Commission's Staff, classified by subject matter, appears at R. I, 91-101.

Since the true nature and effect of the Commission's determinations can be understood only in the light of the evidence which was before it when it rendered its Opinion and made its rate order, we later summarize this evidence and the Commission's determinations thereon under our discussion of rate base, operating expenses and other factors requiring determination in fixing rates.

## SUMMARY OF ARGUMENT.

The judgment of the Circuit Court of Appeals reversing the Commission's orders in this case should be affirmed for the following among other reasons:

### I.

### RATE BASE.

The Commission began its rate base calculations with a figure more than $17 million below the original cost of Hope's interstate properties here involved. This it did by erroneously considering as "original cost" and "actual legitimate cost" under the Natural Gas Act not the amount of money actually spent by Hope in the construction of those properties, which amount was not in dispute, but only such parts of those amounts as Hope had at the time capitalized on its books under its varying accounting practices of the past. As a result the Commission here fixed a rate base on accounting principles inconsistent with those applied by it in determining annual operating expenses and inconsistent with a proper construction of the term "original cost" as that term is used in the Natural Gas Act and as it is defined in the Commission's Uniform System of

Accounts. Thus it eliminated from the rate base a large part or all of the original cost of some 2600 wells and many other items of physical property now used in rendering public service. There is no justification for this elimination either in theory or in the facts pertaining to Hope's past rate history. It constitutes arbitrary retroactive regulation.

Hope's existing interstate properties were built over a 43-year period commencing in 1898 with half of them built prior to World War I at price levels approximately one-half of those since prevailing. By beginning its rate base calculations with these ancient, partial book costs the Commission disregarded the known, proved and great changes in price levels that have occurred since 1898. Thus its rate base admittedly does not reflect by any amount the change in general price levels since 1898, in the purchasing power of the dollar, or present value by any standard of measurement.

From partial past costs of Hope's properties the Commission deducted a recalculated depreciation reserve which on many substantial items of property left in the rate base, less than their present salvage value and otherwise greatly overstated the amount of accrued depreciation existing in fact.

The rate base so fixed is too low under the Natural Gas Act and under the Constitution. Both protect Hope's existing property to the extent of not permitting the Commission to compel its consumption and use at less than a fair return on its present value, and properly so. The Commission's rate base and rate making method here applied further fail to meet the prudent investment or any other standard of reasonableness. They are not supported by reason or experience and are arbitrary and invalid.

## II.

## OPERATING EXPENSES.

The Commission reduced or eliminated substantial portions of Hope's necessary operating expenses. It failed to allow any annual depreciation upon the properties which it omitted from its rate base and upon properties in service in 1942 which Hope had added to its plant since 1940. On other properties it substantially understated Hope's necessary depreciation expenses by calculating its allowances on past book cost rather than upon the present value of the properties in service. Thus it refused Hope the money necessary to maintain its plant under present price levels. In allocating cost the Commission allowed Hope a wholly inadequate return upon its West Virginia distribution properties. It eliminated Hope's actual expenditures for a deep test well which proved dry. It reduced Hope's expenses by crediting against them substantially all of the earnings from the gasoline and butane business of an affiliated company without adequate allowance to that company for return on its property. Finally, the Commission eliminated millions of dollars of federal income taxes actually paid by Hope in determining past rates and allowed a wholly inadequate amount of federal income taxes in determining future rates.

## III.

## RATE OF RETURN.

The Commission arbitrarily applied a low present rate of return to its past cost rate base. This combination of ancient cost in the rate base with a present day rate of return is not in accordance with the prudent investment principle of rate making and in any view is unreasonable. The rates of return applicable to the past periods when Hope's properties were being built were shown in the record and the Commission arbitrarily and unreasonably refused to apply them to its past cost rate base.

## IV.

## VIEWED IN THEIR ENTIRETY THE RATES FIXED BY THE COMMISSION ARE TOO LOW BY ANY STANDARD.

The rates fixed by the Commission are substantially too low on either the present value or the prudent investment method of rate making. They allow Hope less than 4% on any minimum estimate of present value. On the prudent investment basis they allow Hope less than 5% for both return and annual depreciation and depletion. That the rates are too low is shown additionally by the fact that they assume that Hope can continue indefinitely to furnish large quantities of gas to meet present abnormal demands at a delivered cost of 9¢ per M.c.f., whereas the average price which Hope must pay for purchased gas in West Virginia is 18¢ per M.c.f. The Commission's rates cannot be justified on the ground that Hope's financial record in the past has been successful, or on any other ground. Hope's recent experience attempted to be added to the record at this time indicates that even upon the Commission's own rate making theories the reduction which it ordered is excessive.

## V.

## THE COMMISSION'S FINDINGS AS TO LAWFULNESS OF PAST RATES.

The Commission's retroactive determination of rates for the three and a half year period prior to the effective date of its order fixing rates for the future is beyond its authority. The Natural Gas Act authorizes it to fix only future rates "to be thereafter observed and in force" (15 U. S. C. 717d (a)). It contains no authority to order reparations or to make retroative determinations. These retroactive findings are based upon the same formulas applied in fixing future rates and are therefore invalid. Additionally, they retroactively judge the reasonableness of past rates each year by hindsight instead of by foresight and thus impose an arbitrary and unreasonable standard of conduct.

# ARGUMENT.

## I. RATE BASE.

*(Com. Brief, 33-99; Cleve. Brief, 28-52)*

### A. SUMMARY OF THE EVIDENCE AND THE COMMISSION'S DETERMINATIONS.

#### 1. Costs New.

Originally both parties introduced evidence as to rate base as of December 31, 1938. Thereafter such evidence was brought down to various later dates. Because all of the original exhibits develop figures as of December 31, 1938 we shall use these figures hereinafter unless the text otherwise indicates.

In submitting evidence of the rate base for the interstate business both parties excluded all distribution property and likewise excluded certain property used to carry coke oven gas used as fuel in Hope's compressor stations. For 1940 by stipulation of the parties the properties, revenues and operations of the former Reserve Gas Company, a subsidiary of Hope whose properties and business Hope acquired by merger on December 30, 1939, were excluded (Stipulation, Ex. 77; Tonkin, Tr. 302). It will be understood that all figures hereafter used referring to rate base exclude all of these items.

The items which entered into the interstate rate base were these:

(1) The physical properties, including production system, transmission system and general property;

(2) Operated leaseholds;

(3) Useful unoperated leaseholds;

(4) Working capital; and

(5) Capital additions after 1940.

Items (4) and (5) were the subject of separate allowance and figures for them will not be included in the present discussion of property costs.

Although items (1), (2) and (3) are separately dealt with in many of the exhibits, we believe it will contribute to simplicity of explanation hereafter to combine them and thus show over-all figures for the interstate physical property and leaseholds. If the Court refers to figures in the exhibits and they seem at first not to be the same as those in the brief this varying treatment of leaseholds will explain the difference.

**Book Cost.** The properties devoted to interstate service as capitalized on the books of Hope as of December 31, 1938 amounted to $52,730,666 (Ex. 20, R. I, 197). The cost so capitalized reflected, of course, the varying accounting practices of Hope over its previous 40-year history. It included only such costs as had been charged to capital accounts on its books at the time the properties were constructed and which had not been retired from the capital accounts. When Hope prepared a detailed field inventory and cost study of its property as of that date it found certain property shown in its capital accounts which did not appear in the inventory and conversely, other property which appeared in the inventory, but was not shown in its capital accounts. Hope made the proper adjustment both ways when it determined the actual original cost of the existing properties (Ex. 20, R. I, 173-177). All of Hope's work sheets and other data with respect to these studies were made available to the Commission's Staff (Ex. 20, R. I, 189).

**Adjusted Book Cost.** The Commission's Staff began with this $52,730,666 book cost and prepared an adjusted book cost, making changes to correct what it called "accounting errors." It accepted Hope's inventory. It then made the same adjustments downward which had been made by Hope for the items of property which had been retired from service but not retired on the books as shown

by this inventory, but made only a small part of the upward adjustments which had been made by Hope to include the cost of the items of property not shown on the books but actually found to exist by the inventory. The balance of these necessary upward adjustments were not made by the Staff, either on the theory that the cost of these existing items of property had originally been charged to other than capital accounts or on the claim that no voucher for them as separate items could be found in Hope's records. The adjusted book cost so arrived at by the Staff for Hope's interstate property was $51,792,000 (Ex. 57, R. I, 219-221).

**Original Cost.** Hope at the direction of the Commission under Section 6(b) of the Natural Gas Act prepared and introduced a statement of the original cost of its property (Ex. 20, R. I, 167). In so doing it considered original cost to mean the amount of money actually spent to construct the various items of property now in service at the time they were constructed regardless of how the expenditures were at the time charged on the books. For reasons hereinafter fully discussed the full original cost was not capitalized on its books. Accordingly Hope went back to its original work orders, vouchers and other records to ascertain what they recorded the actual construction cost of the existing properties to have been at the time of construction and found the actual original cost of all the property now in service to be $69,735,000 (Ex. 20, R. I, 195-197).

The Staff introduced no statement of original cost but claimed that its "adjusted book cost" was also the "original cost" and the "actual legitimate cost" (Smith, R. I, 270).

The difference between the Staff's figures and those of Hope depend on a question of law which is fully discussed beginning at page 30 below.

**Increased Price Levels.** Hope's properties in service on December 31, 1938 were constructed gradually over a period of more than forty years. Necessarily its costs, both original and book, reflected the varying price levels that prevailed over those years. In order to show the effect of these changing price levels upon Hope's property the costs of the various items of property constructed in each year were adjusted by the application of price trends to show what they would have cost if constructed when and as they were but substituting the prices for labor and materials paid by Hope in 1938 for the prices actually paid at the time of construction. The purpose of this was to show just how much change there was in the level of prices applicable to this property over the 40-year period (Ex. 20, R. I, 195-197).

The result of this trending was to show that had the property been constructed in the manner it was, but at 1938 prices, the amount of money actually paid therefor (original cost) would have been $105,101,000 in place of the actual original cost of $69,735,000 (Ex. 20, R. I, 193). Thus the price level applicable to this property in 1938 was more than 50% higher than the average price level prevailing at the times the various items of property were constructed. Exhibit 20 (R. I, 207) contains a summary of the original cost by years together with the trended original cost as shown in the exhibits.

This summary further shows that one-half of Hope's present property was constructed prior to 1917 at an original cost in round figures of $25,000,000. The other half was constructed since 1917 at an original cost of $45,000,000. Accordingly, if both halves of Hope's present property had been constructed over the years since 1917 its original cost would have been $90,000,000, and if its books had been kept in accordance with the present Commission System of Accounts, the recorded book cost would now be $90,000,000.

**Reproduction Cost New.** Hope presented an estimate of reproduction cost new of $97,340,000 (Rhodes, Ex. 16-A, R. I, 165, Ex. 16-B to I, inclusive; Ex. 37, 50). This estimate was made by George I. Rhodes of Ford, Bacon & Davis, a widely experienced engineer in the design, construction and operation of many natural gas systems. It was most carefully prepared.[12] It contained no estimate whatever for the cost of developing the business, or for going concern value, or for any discovery value of the great gas fields developed by Hope (Ex. 16-A, R. I, 162). In other words, it included only the estimated cost of reproducing the physical property with leaseholds included at actual cost.

It will be noted that this reproduction cost is nearly $8,000,000 less than the trended original cost. This is to be expected. The trended original cost reflected a construction of the property by the methods and in the exact manner employed at the time the various items were constructed but at prices prevailing in 1938. The reproduction cost contemplated a present reproduction of the property at one time by the most modern and efficient methods.

The record also showed that The Public Utilities Commission of Ohio in passing on the rates of Hope's affiliate, East Ohio, determined a reproduction cost new of Hope's interstate property as of June 30, 1937 in the amount of $100,257,000 (*Cleveland* case, *supra*, pp. 8-9, Exhibits A and C to Cleveland's "Supplement to Petition and Complaint as Amended" herein, Docket No. G-100, Table 6,

---

[12] No Commission witness testified that Hope's properties could be built at present price levels at anything less than the aggregate amount shown in Hope's exhibit. Criticism was made only by one Staff witness as to installation costs on field and transmission lines and as to what pipe prices prevailed in 1938 (Bodner, Ex. 73 and 73A, R. III, 83-95). The record showed that pipe on large scale pipe line projects in 1941 cost more than the 1938 pipe prices used in Hope's exhibit (Rhodes, Tr. 5541-5555; Tonkin, Tr. 5760).

p. 117). Pipe prices as of the date of that determination were higher than the 1938 prices which Mr. Rhodes used. As of 1941 and later, the Ohio Commission's finding of reproduction cost new is probably more accurate than that of Mr. Rhodes (Rhodes, R. II, 72; Tr. 5541-5552; Tonkin, Tr. 5760).

Hope further offered evidence to show that the reproduction cost new determination by the Ohio Commission as of 1937 was merely an adjustment to that date of a reproduction cost new of Hope's physical property agreed to as of 1931 and 1932 between the engineers of East Ohio and of the complaining Cities of Cleveland and Akron. This evidence the Commission excluded (Exs. 121 and 122; Tr. 5927-5945).

**2. Accrued Depreciation.**

**Hope's Evidence.** On behalf of Hope Mr. Rhodes and his engineering assistants determined the amount of accrued depreciation existing in all of Hope's properties as of December 31, 1938, that is the extent to which their total service life had already expired (Rhodes, R. II, 421-422). This determination was made by methods appropriate to each of the several property classifications (Ex. 21, R. I, 355-367; Ex. 22).

Accrued depreciation in Hope's 3300 gas wells was determined on the basis of the proportionate decline in useful rock pressure from the time the wells were drilled to the date certain (Ex. 21, R. I, 356-358). Depreciation of pipe lines was determined by extensive sampling and inspection of buried pipe in 1939, the measurement of the pitting of the pipe inspected, the application of rules developed by the U. S. Bureau of Standards expressing the behavior of pitting in buried pipe and a final determination of the overall extent to which the service life of the pipe lines had been consumed to the date certain (Ex. 21, R. I, 358-360;

Rhodes, R. II, 440-442). Depreciation accumulated in compressor station equipment was based on a 1939 field observation of this equipment, a study of the history of its use and operation, retirements and other factors affecting its service life (Ex. 21, R. I, 360-361). Depreciation accumulated in property in other accounts was similarly determined from inspections in 1939 and similar investigations. In all accounts where necessary an additional allowance was made to provide for accumulated depreciation or expired service life that could not be determined from inspection (Ex. 22).

Mr. Rhodes found Hope's physical properties as a whole to have an average accrued depreciation of 34.51% and a corresponding present per cent condition of 65.49%. The present per cent conditions of the principal classes of physical property were found to be as follows (Ex. 21, R. I, 369-371; Ex. 38):

| | Physical Properties | Reproduction Cost New | Percent Accrued Depreciation | Resulting Percent Condition | Cost New Less Depreciation |
|---|---|---|---|---|---|
| 332.1 | Gas Well Construction | $19,321,139 | 68.7 % | 31.3 % | $ 6,047,517 |
| 332.2 | Gas Well Equipment | 10,874,199 | 43.6 | 56.4 | 6,133,048 |
| 333.1 | Field Lines | 17,282,312 | 26. | 74. | 12,788,911 |
| 352.2 | Compressor Station Structures | 1,957,473 | 28. | 72. | 1,409,381 |
| 353 | Transmission Mains | 16,500,288 | 21. | 79. | 13,035,228 |
| 354.2 | Compressor Station Equipment | 9,874,271 | 19. | 81. | 7,998,160 |
| All other accounts | | 4,868,675 | 20.4 | 79.6 | 3,874,030 |
| Undistributed Construction Costs | | 14,296,099 | 23.66 | 76.34 | 10,913,139 |
| Total | | $94,973,856 | 34.51% | 65.49% | $62,199,414 |

Before this Hope evidence was presented counsel for the Commission assumed that Hope would claim merely "observed physical deterioration" of its properties, as utilities often have (see, for example, *Natural Gas Pipeline* case, 315 U. S. 586, Note 4). However, when questioned on this point Mr. Rhodes explained clearly that he had de-

termined the accrued depreciation from all causes (R. II, 424).[13]

**The Commission's Staff's Evidence.** The Commission's Staff did not undertake to determine by inspection of Hope's properties, by a study of their use and operation, by a study of the past depreciation experience of Hope, or otherwise, what the present actual existing depreciation was in any or all of Hope's properties or what proportion of their service life had expired. Instead Mr. French, a Staff engineer, estimated total service lives for each kind of Hope property—for example 45 years for field line pipe, 40 years for gas well tubing and casing, 39 years for compressor station equipment and 64 years for transmission line pipe (Ex. 65, R. III, 172-173). There was a great deal of evidence showing that these estimates on Hope's long-

---

[13] "Q. [By Commission Counsel] Then really, your condition per cent was based upon observed physical deterioration in the Hope properties, was it?

"A. [Rhodes] We started with observed physical deterioration. *There was added to that* all of the effects of obsolescence and things of similar nature which have been and are leading to the retirement of Hope's property, *and on top of all that, there was added* an allowance which I deemed sufficient to cover all depreciation of all other kinds, existing in the property." (R. II, 424)

Mr. Smith of the Commission's Staff in his general oral testimony on depreciation principles (Smith, R. I, 380, 383-384) commented unfavorably on what he called "the observed depreciation" method. However, on cross examination he readily admitted that these comments had nothing to do with Hope's testimony in this case (R. I, 388):

"Q. In your comments upon observed depreciation, do I understand that you were not referring to Mr. Rhodes' testimony?

"A. I was speaking generally of observed depreciation studies.

"Q. And you weren't referring specifically to the testimony in this case?

"A. That is correct."

lived properties were either based on erroneous calculations or were mere "judgments" or guesses by Mr. French (Ex. 65, R. III, 151; Exs. 84, 85, 86, 87, 101, 102, 103, 104; French, Tr. 3463, 3465, 3478, 3484, 3490-3493, 3502, 3508, 3523, 3532-3534, 3553, 3578, 3601; Rhodes, Tr. 5239-5395).

Next Mr. French converted his estimated service lives into annual depreciation rates by dividing the lives into 100—for example the 45 years for field line pipe became 2.22%, the 40 years for gas well tubing and casing became 2.5% and so on (R. III, 172-173). The Staff accountants then applied these annual depreciation rates to their "adjusted book cost" of the properties to compute a so-called "reserve requirement" (Dunn, Ex. 61, R. III, 175). In other words, they calculated the depreciation reserve that they claimed Hope would have accumulated if it had started in 1898 and had each year applied Mr. French's rate to Hope's book costs for its plant (Dunn, R. II, 540-541). Similar computations, using estimated percentages of annual gas withdrawals, were used to arrive at a revised depletion "reserve requirement" for some properties which the Staff claimed should be "depleted" rather than depreciated (Ex. 61, R. III, 180-181, 187). In this instance also there was much evidence showing that the estimated percentages of withdrawal were erroneous and were erroneously applied and that some of the properties which the Staff depleted were not in fact subject to depletion (Exs. 88, 93-97, 100, 119, 141; Dunn, R. II, 473-510; Tollefson, Tr. 4919-4994; Rhodes, Tr. 5233-5237, 5966-5976; Tonkin, Tr. 5773-5785).

As a result of all its computations the Staff worked out an "Adjusted Depreciation Reserve" of $23,501,355.80 as of December 31, 1938 (Ex. 61, R. III, 184-186).

### 3. The Commission's Rate Base Determinations.

The Commission's rate base calculation was as follows (Opinion, R. I, 50):

| | December 31, 1938 | December 31, 1940 |
|---|---|---|
| "Gross Investment in Gas Plant in Service" (including all leaseholds[14]) | $51,792,000 | $52,523,000 |
| Less: "Actual Existing Depletion and Depreciation" | 21,188,000 | 22,328,000 |
| "Net Investment" | $30,604,000 | $30,195,000 |
| Add: "Working Capital"[15] | 2,100,000 | 2,125,000 |
| "Interstate Rate Base" | $32,704,000 | $32,320,000 |

For the purpose of its order reducing future rates the Commission used the rate base shown for December 31, 1940 plus an allowance of $1,392,000 (Opinion, R. I, 50) for one-half of Hope's net capital additions during the years 1941 to 1943. The corresponding figures for December 31, 1938 are shown because in the evidence heretofore stated it was figures of that year that were used.

---

[14] The unoperated leaseholds were found by the Commission, as the evidence showed, to be "useful or imminently useful and * * * necessary for the continued and efficient production of natural gas" (Finding (14), R. I, 4). The Commission's further finding that "its cost should be included in the rate base" (*ibid.*) was clearly required by the evidence. This was no item of "liberality" for which any credit may be claimed, as the petitioners now try to do (Com. Brief, 31).

[15] In addition to an uncontested amount for materials and supplies the Commission allowed $871,407 cash working capital as of December 31, 1938 and $896,401 for 1940 (R. I, 49). Hope's testimony showed that as a practical business matter it needed at least $1,750,000 (Ex. 36; Chisler, Tr. 1781-1782). The Commission brief's reference to "Hope's corrected claim" (p. 32) is apparently based on the lower court's remark that if certain adjustments were made in Hope's estimate the result would be less than the Commission's allowance (R. IV, 194). This remark overlooked the offsetting adjustment to include prepaid items which the Commission recognized in its Opinion had to be made (R. I, 49). This allowance by the Commission of half the cash working capital Hope testified it needed is another of the items of "liberality" for which it now claims credit (Com. Brief, 32).

As we have seen, when the Commission fixed the above rate base it had before it the following undepreciated costs or values for the interstate property as of December 31, 1938:

| | |
|---|---|
| Book Cost | $ 52,730,000 |
| Staff's Adjusted Book Cost | 51,792,000 |
| Original Cost | 69,735,000 |
| Original Cost at 1917-1938 prices | 90,000,000 |
| Original Cost Trended to 1938 prices | 105,101,000 |
| Reproduction Cost New: | |
| Ohio Commission—6/30/37 | 100,257,000 |
| Company—12/31/38 | 97,340,000 |

The Commission started its rate base computation with the exact dollars shown by its Staff's adjusted book cost of $51,792,000.

The source of the "Actual Existing Depletion and Depreciation" in the Commission's rate base calculation is the Staff's "Adjusted Depreciation Reserve" of $23,501,355 as of December 31, 1938. The Commission revised this reserve downward to $21,188,000, on the basis of four of the obvious errors pointed out by Hope in the application of the Staff's own theories (Kennedy, Exs. 137 and 138, Tr. 6492-6519; Opinion, R. I, 43-45). However, following the Staff's general notions, the Commission said this "required depreciation and depletion reserve" is "the best evidence of the measure of actual existing depreciation and depletion and it will be deducted from the actual legitimate cost of the Company's property for rate making" (Opinion, R. I, 45).

This "required depreciation and depletion reserve" is about 41% of the adjusted book cost from which it was deducted to arrive at the Commission's rate base.

The Commission's "Net Investment" rate base includes operated and unoperated leaseholds at cost less depletion in the amount of $1,212,600 for December 31, 1938 (R. I, 50; R. III, 188). Thus its "Net Investment" rate

base for Hope's physical properties is $29,391,400 for December 31, 1938.

The present value of these physical properties was determined at $66,166,382 as of June 30, 1937 by The Public Utilities Commission of Ohio in the *Cleveland* case, *supra*, pages 8-9, and affirmed by the Supreme Court of Ohio in that case (R. IV, 171; Exhibits A and C to Cleveland's "Supplement to Petition and Complaint as Amended," Docket No. G-100, Table 6, p. 117).

These physical properties which appear in the Commission's rate base at about $29,000,000 were valued for 1941 taxation by the State of West Virginia at over $50,000,000 (Ex. 108, R. I, 391-393; Tr. 5431-5433, all excluded by the Commission[18]).

## B. THE RATE BASE CALCULATION OF THE COMMISSION STARTED WITH A FIGURE THAT IS OVER $17,000,000 BELOW THE ACTUAL ORIGINAL COST OF HOPE'S INTERSTATE PHYSICAL PROPERTIES AND LEASEHOLDS.

*(Com. Brief, 70-89; Cleve. Brief, 39-46)*

### 1. Statement of This Issue.

We start with this issue, not because it is the most important, but because whatever method of arriving at a rate base is adopted, an important element of evidence is the true original cost.

At the direction of the Commission (R. II, 36), pursuant to Section 6(b) of the Natural Gas Act, Hope prepared a detailed field inventory and a statement of the original cost of its properties (Ex. 20, R. I, 167-207) *supra*, pages 20 to 21. In doing this Hope followed the accounting principles set forth in the Commission's Uni-

---

[18] This exclusion was erroneous. *City of Lima v. The Public Utilities Commission*, 106 O. S. 379, 140 N. E. 147 (1922); *Greencastle Water Works Co. v. Public Service Commission of Indiana*, 31 F. (2d) 600 (D. C., S. D. Ind., 1929); *Great Falls Gas Co. v. Public Service Commission of Montana*, 34 F. (2d) 297 (D. C., D. Mont., 1929).

form System of Accounts (Ex. 58, R. III, 41-68) and the new West Virginia System of Accounts which is practically identical with the Commission's System (Ex. 13). The statement of original cost prepared by Hope is the statement which its books would actually show today had they been kept from the beginning in accordance with the new System of Accounts (Antonelli, R. II, 226, 179, 207). All annual operating statements prepared by the various parties in this case were prepared in accordance with the same System. Thus Hope achieved an entire consistency between the accounting principles used in preparing the annual operating statements and the accounting principles used in determining all evidence as to rate base. Proceeding in this way it found that the amount of money actually spent to construct Hope's present properties as of December 31, 1938 was $69,735,000 (Ex. 20, R. I, 195-197).

As we have seen, in preparing the original cost statement ordered by the Commission Hope went back to its original work orders and vouchers and determined the actual amount of money spent for each item of existing property at the time of its construction (Ex. 20, R. I, 174, 195-197). The original work orders and vouchers were available for this to the extent of 94% of the property. In the case of the remaining 6% estimates were made of the probable cost at the time of construction[17] (Antonelli, R. II, 184).

---

[17] In determining the original cost of the properties by examination of its books of account, vouchers and other records and similar records of its predecessor companies, Hope was unable to secure records relating to minor amounts of property acquired from other utilities, the original cost of which had to be estimated upon the basis of Hope's experience in constructing similar properties under similar circumstances and during like periods (Ex. 20, R. I, 182). Similar estimates had to be made in the case of a few small field lines laid prior to 1907, a few early compressor station and other structures, and minor miscellaneous equipment (Ex. 20, R. I, 186, 188-189). In certain other cases the actual total cost of a group of properties was allocated among several properties on the basis of estimates but the total amounts included in original cost were determined directly from actual records and vouchers (Ex. 20, R. I, 186-187).

As we have noted, the Commission's Staff started with Hope's book costs of $52,730,666 and adjusted them for what it found to be "accounting errors" to $51,792,000, with which the Commission began its rate base calculation (Opinion, R. I, 50). This latter figure the Commission and its Staff referred to variously as "Investment in Gas Plant per Books as Adjusted" (Ex. 57, R. I, 219), "Gross Investment in Gas Plant in Service" (Opinion, R. I, 50), "Original Cost" (Ex. 57, R. I, 209, 215) and "actual legitimate cost" (Order, R. I, 10, 11).

The Commission made no attempt whatever to determine original cost on the accounting principles set forth in its Uniform System of Accounts and thus to make its rate base accounting consistent with its annual operating statement accounting.

Thus the difference between the parties is fundamentally a question of what is original cost. There was no dispute about the facts. It was conceded by Staff witnesses that if the Staff's conception of original cost had been the same as that of Hope the Staff would have arrived at substantially the same dollars shown by Hope (Smith, R. I, 300; Pace, R. I, 318-321, 324-326). Thus whether the Commission or Hope correctly stated what money was actually spent to construct Hope's existing properties is not in issue. Admittedly Hope's original cost figures show this.[18]

---

[18] In the reply brief filed by the Commission's Staff before the Commission the correctness of this statement was admitted in the following language, page 12:

> "On page 40 of the Company's Brief the statement is made that Mr. Smith and Mr. Pace of the Commission's Staff would not differ with the Company's claims on gross dollars that were originally spent on the various Company accounts. This is a correct statement, but does not disclose the complete picture. The other half of the picture is the past voluntary assignments by the Hope Company to operations of a part of the gross dollars originally expended. * * *"

The difference between the parties consisted of the following items (Ex. 59, R. I, 351, 353):

| | |
|---|---|
| Drilling and other direct well construction costs for 2,633 wells | $12,643,641 |
| Other direct material and labor costs of buildings, pipe lines and other miscellaneous property | 1,380,154 |
| Field and general overheads, including interest during construction | 3,825,126 |
| Total | $17,848,921 |

Brief comment as to each of these is necessary.

Prior to 1923 Hope had charged the cost of drilling wells to operating expenses (Ex. 20, R. I, 185). The first West Virginia System of Accounts became effective as to Hope in 1923 (Ex. 117; Chisler, R. II, 174) and required these costs to be capitalized as does the Commission's present System of Accounts (Ex. 58, R. III, 41). Hope now has in service approximately 3300 wells the total direct drilling cost of which was a little more than $16,500,000 (Ex. 20, R. I, 195-197). Of this $16,500,000 a little over $4,000,000 is capitalized on the Company's books and represents the 772 wells now in service which were drilled or drilled deeper after 1922. The Commission in its so-called "original cost" has in the inventory the 3300 wells. In the equipment account it has the cost of equipping 3300 wells but in construction or well drilling cost it has only the cost of drilling or drilling deeper 772 wells (Pace, R. I, 318-320). Hope, of course, has included the cost of drilling all wells now rendering public service (Opinion, R. I, 25). This one item accounts for $12,643,000 of the difference between the original cost as determined by Hope and by the Commission.

$1,380,000 of the difference represents all or a large part of the cost of the following among other items of property now actually being used by Hope to produce and deliver gas, which the Commission excluded entirely from its original cost (Ex. 59, R. I, 349-353; Ex. 60):

275 warehouses, barns, garages, blacksmith shops, sheds, tool houses, storage buildings and wash houses;

686 pits, bridges, fences, pipe skids, pipe racks and sidewalks;

2,945 benches, racks, heaters, cabinets, tables, truck flat beds and accessory items;

152 miles of pipeline trench for lines from 1" to 20";

9,584 telephone poles with crossarms, brackets, pins and insulators;

122 meter houses;

1,386 meter boxes;

752 installation costs for tanks, pumps, motors, engines, gas coolers, boilers, traveling cranes, etc.

When a check of Hope's inventory with its books disclosed property such as this in the inventory was not on the books, and some property on the books was not in the inventory, Hope made the adjustments both ways in all cases (Ex. 20, R. I, 177) but the Commission did not.

Let us illustrate by a concrete example. On one of its main transmission lines, H-3, Hope put in a new river crossing which cost over $10,000. At the same time the old river crossing was taken out and retired from service. On its books, however, Hope charged the cost of the new river crossing to expense and left the old river crossing, which cost $8,000, in its capital account. When the preparation of the inventory and the examination of the records disclosed this Hope deducted the $8,000 cost of the old river crossing from, and added the $10,000 cost of the new crossing to, its original cost statement (Antonelli, Tr. 5025-5026).

When the Commission accountants checked this they adopted the reduction of the book costs to retire the old river crossing but declined to include in their adjusted book costs the cost of the new river crossing, presumably because that had been previously charged to expenses. The result is that in the Commission's rate base there is not one penny on account of this river crossing now in use. There were many items of property so treated by the Staff. (Antonelli, Tr. 5026-5027).

$3,825,000 of the difference represents overhead costs of constructing Hope's properties (Ex. 59, R. I, 349-353) which at various times in the past Hope charged to operating expenses or, in the case of interest during construction, did not enter on its books at all since Hope did not account for the interest which its own funds were entitled to earn. In the case of these items as in the case of others there was no substantial disagreement as to the amount of these costs but the Commission and its Staff disallowed them on the ground that they had not previously been capitalized (Smith, R. I, 251-254).[19]

We turn then to the meaning of original cost.

**2. Meaning of Original Cost.**

The differing conceptions of original cost of the Commission and Hope may be tersely stated. Mr. Smith, the Commission's chief accountant, defined original cost as

> "the cost accounted for in the past [on the Company's book plant accounts] exclusive of errors in accounting." (Smith, R. 1, 233-234)

---

[19] Both Hope and the Commission's Staff excluded from current operating expenses all current overhead costs on current property construction. Hope did so to be consistent between rate base and operating expenses. The Staff was not consistent in that it also excluded overhead charges from capital accounts. The Commission in its Opinion (R. I, 49-50) added current overhead costs to current operating expenses, thus in this instance eliminating the inconsistency in the Staff's accounting treatment. Hope made no claim in any of its exhibits for current overhead charges in operating expenses and none of Hope's figures shown in this brief indicating the results of current operation include them. Hope of course is not entitled both to the capitalization of overheads and an annual allowance in expense for overheads.

Hope's decision to treat overheads as current expense, referred to in the Commission's Opinion (R. I, 49), was made in view of the anticipated action of the Commission excluding overheads both from rate base and from operating expense. In testing rates the capitalization method gives Hope the proper allowance. The current expense method used by the Commission and based solely on the overheads incurred in the improvements and betterments made in a single year does not.

This means that if, in accordance with any acceptable practice prevailing at the time the entries in the books were made, expenditures were charged to operating expense they cannot now be considered a part of the original cost, even though by the present System of Accounts they are required to be charged to capital account and even though no corresponding items now appear in expense (Smith, R. I, 238). Thus to Mr. Smith and the Commission "original cost" and "actual legitimate cost" mean no more than the recorded book costs slightly adjusted for what are determined to be "accounting errors" made at the time (Smith, R. I, 233-234; 287-288).

Hope's conception of original cost is that it means the amount actually paid to establish the utility to be ascertained as a fact from the Company's books, work orders, vouchers and other direct evidence, if possible, and to be estimated where these are not available, and that this must be done in accordance with the same accounting principles that are used in setting up the annual operating statements. Otherwise, as will be shown later, the cost of gas is either understated or overstated. Without such consistency rates cannot be fair.

**(a) Meaning of original cost prior to the passage of the Natural Gas Act.**

The term "original cost" inserted in the Natural Gas Act by Congress in 1938 was not a new conception. It was at least as old as the fair value rule itself and was stated in *Smyth v. Ames*, 169 U. S. 466, as one of the facts to be considered as evidence of value.

What courts, commissions, economists and accountants have all recognized as a proper definition of original cost is nowhere better stated than by Mr. Justice Brandeis, in his celebrated concurring opinion in *State of Missouri, ex rel. Southwestern Bell Telephone Company vs. Public Service Commission*, 262 U. S. 276. In a note at page 295

he defined original cost and the method of determining it as follows:

> "Original cost is the amount actually paid to establish the utility. The amount is ascertained, where possible, by inspection of books and vouchers, and by other direct evidence. If this class of evidence is not complete, it may be necessary to supplement it by evidence as to what was probably paid for some items, by showing prices prevailing for work and materials at the time the same were supplied. But the evidence of these prices is merely circumstantial, or corroborative, evidence of the amount actually paid. In determining actual cost, whatever the evidence, there is no attempt to determine whether the expenditure was wise or foolish, or whether it was useful or wasteful. Historical cost, on the other hand, is the amount which normally should have been paid for all the property which is usefully devoted to the public service. It is, in effect, what is termed the prudent investment. In enterprises efficiently launched and developed, historical cost and original cost would practically coincide both in items included and in amounts paid; that is, the subjects of expenditure would coincide, and the cost at prices prevailing at the time of installation would substantially coincide with the actual cost."

Nothing could be plainer than that in Mr. Justice Brandeis' view, original cost is the amount of money originally paid to establish the utility. He said nothing about the amount of money that was charged to capital accounts on the books of the company and nothing about corrections for accounting errors. He said original cost was a *fact* to be ascertained by an examination of the original work orders, vouchers, books and other records of the company. If the cost of part of the property could not be ascertained from direct evidence, it was to be estimated and evidence received "as to what was probably paid for some items."

Not only was this Mr. Justice Brandeis' conception but it was the conception of every other writer and authority on

the subject. In Appendix B at page 159 below we have printed excerpts from numerous economists, accountants, courts and commissions all of which in varied language say that original cost is the amount of money spent in the construction of the present property, that it may or may not be represented by the book cost, and that it is to be determined as a fact from all the evidence including estimates where these are necessary to supplement records.

**(b) The provisions of the Natural Gas Act support Hope's construction.**

Not only did Congress thus use words with a well settled meaning but the language of the Natural Gas Act itself indicates this construction. Section 6(b) of the Act requires a natural-gas company upon request of the Commission to file an inventory of its properties "and a statement of the original cost thereof." If by original cost it meant merely the company's book cost there was no occasion for an inventory and the Act should have provided that the company should file a statement of its balance sheet accounts or a statement of the capital accounts on its books. Since these are a part of every financial statement that a gas company makes there was really no reason for inserting Section 6(b) at all if the Commission's interpretation is correct. Clearly the statement of original cost required by Section 6(b) was a statement of the cost of the various items of its property shown in the inventory and not simply the ordinary statement of a company's plant accounts.

Where a natural-gas company is required to file an inventory of all its property under Section 6(b) it is an anomalous construction of that section to hold that in stating the original cost of that same property it shall state only the cost of so much of the property as was at the time of construction capitalized on its books. Specifically, here Hope was required to file an inventory including all of its 3300 wells. It is not to be supposed that it is then to state

as the original cost of drilling these 3300 wells the cost of drilling or drilling deeper only 772 of them, which is all that is recorded in Hope's plant accounts or included in the Commission's "original cost" (Ex. 16, Pt. B, 95; Pace, R. I, 319).

Plainly Section 6 of the Natural Gas Act contemplates the amount of dollars "actually paid to establish the utility" as Mr. Justice Brandeis said and not merely "the cost accounted for in the past exclusive of accounting errors" as Mr. Smith said (R. I, 233-234).

**(c) Hope's construction of "original cost" was adopted in 1939 by the Commission in its uniform system of accounts.**

As authorized by Section 8 of the Natural Gas Act the Commission on November 3, 1939 adopted a Uniform System of Accounts to become effective as to all natural-gas companies on January 1, 1940. This is Exhibit 58 (R. III, 41). Its purpose and its language both support the construction of the term "original cost" adopted by Hope and deny that used by the Commission in its decision in this case.

To bring uniformity, consistency and comparability to the balance sheet and income accounts of natural-gas companies the Commission's Uniform System of Accounts required, first, that after January 1, 1940 all balance sheet and income accounts should be kept in accordance with its requirements, with gas plant properties shown in capital accounts at their original cost and, second, that the properties existing on January 1, 1940 should be reclassified into the new plant accounts in accordance with the requirements of the new System (Ex. 58, 16, 36-37, R. III, 47-49). The original cost which was thus to be shown not only for the properties built in the future but for all existing properties was defined to mean the amount of money actually paid for the property by the person first devoting it to

public service.[20] No previous system of accounts for gas companies had required such a restatement of the cost of the property installed prior to its effective date.

Thus all natural-gas companies were required to make a new start by restating their plant accounts on their books at original cost as of January 1, 1940 precisely as though the new Uniform System of Accounts had been in effect from the beginning. This original cost was defined as Mr. Justice Brandeis had defined it and of course had to be determined in the same way for all companies in order to

---

[20] The Commission's Uniform System of Accounts requires that Account 100.1, Gas Plant in Service, shall "include the original cost of gas plant" (Ex. 58, p. 16). Original cost as applied to gas plant is defined to mean "the cost of such property to the person first devoting it to public service" (Ex. 58, R. III, 44). Cost is defined as meaning "the amount of money actually paid for property or services or the cash value at the time of the transaction of any consideration other than money" (Ex. 58, R. III, 42). Thus the original cost to be shown for property in service is the amount of money actually paid for it by the person first devoting it to public service. See Gas Plant Accounts 100.1, 100.2, 100.4, 100.5 and 107 and the instructions relating thereto (Ex. 58, 16, 17 and 36; R. III, 47). Cost is to be "ascertained by an analysis of the utility's records" (Ex. 58, Instruction 2B, R. III, 48) and original cost is to be "estimated if not known" where properties have been acquired (Ex. 58, Instruction 2C, R. III, 48).

The footnote at page 74 of the Commission's brief stating that the present System of Accounts prohibits the reaccounting for items properly charged to expense in the past is based upon the existence of one sentence in the "Instructions" (Ex. 58, R. III, 48). Instruction 2 B says among other things that in making a classification of accounts to show original cost it is "not intended" that adjustments be made to record amounts previously charged to operating expenses "in accordance with the uniform system of accounts in effect at the time or in accordance with the discretion of management as exercised under such uniform system of accounts." This one sentence is inconsistent with every other definition, direction and instruction in the code (Antonelli, R. II, 179-180). Moreover, Hope's charges to expense in prior years, such as well drilling costs, were not so charged "in accordance with the uniform system of accounts in effect at the time." These charges occurred mostly prior to 1923 (Ex. 99, 10; Chisler, R. II, 174) when there was no uniform system of accounts applicable to Hope (R. II, 174).

achieve the object of uniformity. The result of this requirement was that all natural-gas companies would show their plant accounts both for old and new properties on the same basis in accordance with the new System and consistent with their operating expense statements. All companies would be on a uniform and comparable basis.

All this the Commission denied by its Opinion in this case. Instead it interpreted this accounting code to require the continued statement of the cost of items of plant acquired prior to 1940 in accordance with past accounting practices of each individual company, so long as they do not involve what are called "accounting errors." Mr. Smith answered "absolutely" to a question as to whether he would "freeze the accounting practices of the Company, if they were not due to error, in their statement of plant accounts" (Smith, R. I, 287-288).

To be more specific, if two companies had each spent $10,000 in drilling and $10,000 in equipping a well in 1920 and one company had charged the drilling cost to capital account and the other had charged it to expense, both being acceptable methods of doing it at the time, the Commission would now have one company continue in its plant accounts as the original cost of its well $20,000 and the other company $10,000. And if a third company had charged both the cost of drilling and equipping a well to expenses at the time it was drilled and this were at the time a recognized accounting practice the Commission would have that well included in the statement of original cost at zero (Smith, R. I, 288-289, 293). And this would be true although all of these wells are today in active operation and supplying gas to consumers. The Commission would include in the respective rate bases of these companies $20,000 in one, $10,000 in another and $0 in the third, less in each case, except the last, a computed depreciation reserve.

### 3. The Commission's Determination of a Rate Base Inconsistent with Its Determination of Operating Expenses Has Arbitrarily Understated Hope's Cost of Gas.

All operating expense statements submitted by the parties and as found by the Commission conform to the accounting requirements set forth in the Commission's Uniform System of Accounts which became effective January 1, 1940. Hope adjusted its operating statements for the years prior to 1940 in order to conform them. As previously pointed out, Hope likewise followed these accounting requirements in determining original cost. The Staff admitted that Hope's rate base and operating statements were consistent (Smith, R. I, 298, 300).

The Commission has not been consistent. It has taken Hope's book costs that reflect the accounting practices of 40 years, slightly adjusted them for what it determined to be accounting errors and thus has a rate base that clearly is not constructed on the same accounting principles as the operating statements.

The Commission's reason for its inconsistency is thus stated in its Opinion (R. I, 29):

> "No greater injustice to consumers could be done than to allow items as operating expenses and at a later date include them in the rate base, thereby placing multiple charges upon the consumers."

In Note 12, page 18 of the Opinion (R. I, 32) the Commission further says:

> "Costs of exploration for and development of future gas reserves are considered current operating costs by the industry and Hope has included such costs in its current operating expenses. If retroactive accounting were allowed then the Company might restate these costs as capital investment in the future productive acreage. The Commission will allow $600,000 in annual operating expenses for exploration and development costs in fixing rates. If this item were permitted to be restated in plant cost ten years from now

> $6,000,000 would be added to the rate base resulting in multiple charges to consumers."

The reasons thus set forth by the Commission are repeated in its brief in this Court (pp. 86-87).

Let us take this illustration selected by the Commission and see what the effect upon rates will be if it is treated as the Commission suggests it should be or with consistency as Hope claims.

*Case One on Commission's Theory.* Hope is to have $600,000 per year in expenses for exploration and development costs, which represents roughly 1¢ per M.c.f. in the cost of gas. Suppose effective January 1, 1944 the Commission's System of Accounts is changed to require that thereafter all exploration and development costs shall be capitalized and suppose that it becomes necessary to fix a new rate for Hope as of January 1, 1945. Since these costs have not previous to 1944 been capitalized and since, on the Commission's theory, now to do so and include them in the rate base would result in multiple charges to consumers, there will appear in capital account on Hope's books on January 1, 1945 only $600,000 by way of exploration and development costs—the amount capitalized in the year 1944. This and only this would go into the rate base. And since for the year 1944 the System of Accounts would no longer allow development costs to be charged to operating expenses, there would be nothing in operating expenses for this item. In computing the rate, therefore, the Commission would have in the rate base only $600,000 and if it allowed Hope say 10% of this amount for return and depletion there would be in expenses only the annual capital charges of $60,000 per year, or 1 10th of 1¢ per M.c.f. in the cost of gas. In other words, Hope's cost of gas has apparently been reduced approximately 9/10ths of 1¢ per M.c.f. solely because the change the Commission ordered in accounting has been applied fully to income statement but only partially to capital account.

*Case Two on Commission's Theory.* Let us now see how the rule works in reverse. Suppose exploration and development costs prior to 1944 had been charged to capital account and effective January 1, 1944 were thereafter required to be charged to operating expenses. In fixing a rate as of January 1, 1945 the Commission would find in capital account about $20,000,000 (Ex. 26, 9) representing exploration and development costs capitalized prior to 1944. This would go in the rate base at a depleted condition of the wells of approximately 30% or about $6,000,000 (Ex. 26, 9) upon which, again assuming 10% for return and depletion, Hope would be allowed $600,000 as capital charges in its rates. But in operating expenses of the test year 1944, in accordance with the changed System of Accounts, it already would have $600,000 representing the exploration and development cost of that year. If consistency between operating statement and rate base is disregarded, and adherence to accounts as entered is insisted on, as the Commission claims, the result of this change in accounting requirements would be an allowance to Hope of $1,200,000 per year for exploration and development costs, or the equivalent of about 2¢ per M.c.f. in the cost of gas. This is about twice the normal cost that has been assumed and is again due solely to a change in accounting ordered by the Commission and not fully applied both to rate base and operating statements.

In other words, the Commission's method, which fails to preserve any consistency between rate base and operating expense statements, inevitably results either in an understatement or an overstatement of the cost of gas whenever there is a change in accounting practice.

*Effect of Consistency.* On the other hand, if consistency is maintained there will be no substantial change in the cost of gas. There will be approximately $600,000 allowed in operating expenses either directly as current annual exploration and development costs or through capital

charges on past costs. Thus the cost of gas will not fluctuate with each change in accounting practice ordered by the Commission.[21]

Consistency requires that when *any* cost is included in current expense all *like* costs must be eliminated from the rate base, and in reverse when *any* cost is excluded from current expense and capitalized all *like* costs *must* be included in the rate base. Duplicate charges can occur only when the expenditures are considered in determining both current expense and rate base.

One more illustration of the effect of the Commission's inconsistency is important in this case. Well drilling costs were not capitalized prior to 1923 but since that date under the various codes of account they have been. Suppose that down to January 1, 1937 the cost of drilling presently operated wells had been capitalized in the amount of $16,500,000, and then beginning January 1, 1937 by a change in the System of Accounts such costs were required to be

---

[21] It is difficult to believe the Commission was familiar with the record in this case when it selected this particular illustration of exploration and development costs. In Exhibit 26 Mr. Rhodes worked out the two methods of handling exploration and development costs. The one method he called "Industry Practice of Charging to Expense" and the other method the "Capitalization Method" (Ex. 26, 11). In the first method he used the average of Hope's exploration and development costs for the years 1937 to 1939, both inclusive, as fairly representative; in the second method he capitalized all Hope's exploration and development costs from the beginning down to December 31, 1938, attributed these to all operated acres Hope had ever developed, and retired these costs in proportion as operated acres were retired, depleting the remainder on the same basis as the wells. At all times he maintained complete consistency between rate base and operating expense statements.

He found that on the basis of an 8% rate of return the expense method would put $669,702 annually in operating expenses, whereas the capitalization method would put in expenses $742,390 (Ex. 26, 11). On the basis of a 6½% return, which the Commission used in this case, the figures become $652,240 on the expense method and $655,187 on the capitalization method. The difference between the two methods is wholly inconsequential.

charged to operating expenses. On the Commission's theory the $16,500,000 less depletion would go into the rate base and Hope would be given a return and annual depletion allowance thereon. At the same time there would go into operating expenses the annual well drilling costs for the years 1937 to 1940, resulting in a substantial duplication of cost at the expense of consumers.

It is a partial reverse of that situation that is presented here. Well drilling costs were not capitalized prior to 1923. Since that time they have been. The book costs therefore reflect only the cost of drilling 772 wells drilled since 1922 but do not show the cost of drilling 2600 wells now in use but drilled prior to that time. On the other hand, in operating expenses of the test years 1937 to 1940 there is no allowance for well drilling costs. The result is that the Commission's order includes an inadequate and sub-normal allowance for well drilling. *It has no allowance for return or depletion on the drilling cost of 2600 wells from which gas is currently being supplied to consumers.*

The Commission's inconsistent basis for operating expenses and rate base is arbitrary and demonstrates that its interpretation of "original cost" in the Natural Gas Act is unsound.

**4. The Omission from the Commission's Rate Base of any Consideration of Property Costing Over $17,000,000 is not Justified on the Ground that These Costs have been Recouped by Hope from Consumers or on Other Grounds.**

*(Com. Brief, 78-85; Cleve. Brief, 39-46)*

The justification for the omission of these property costs is placed on various grounds. It is said that a company should not be permitted to impeach the integrity of its books or discretions exercised by management (Opinion, R. I, 31). The principal claim, however, is that Hope's rates were larger in the past than they would have been

if these expenditures had been charged to capital account and that in consequence Hope has "recouped" the expenditures from consumers and no longer has any investment in them (Opinion, R. I, 34; Com. Brief, 78-85; Cleve. Brief, 42).

As to impeaching books it is clear that Hope in setting forth a correct original cost in accordance with modern accounting procedures is not in any wise impeaching its books or its records. In fact it uses all of those for the purpose of finding the true cost. This no more impeaches these records than would a determination of reproduction cost new or any other method of measuring the value of the whole property as presently existing.

Moreover, it is to be observed that the position is not one for which Hope is responsible. Hope might well have been charging well drilling costs to operating expenses up to the present day had not West Virginia in 1923 ordered it to do otherwise. That as a matter of proper accounting West Virginia was right in requiring well drilling to be capitalized the Commission admits by its own System of Accounts. Thus the Commission, not Hope, has reversed former decisions of management on accounting matters. *But the Commission seeks to reverse these decisions only as to the operating statement and not as to the capital statement, thereby substantially understating the present cost of gas.*

As to whether Hope's rates in the past were higher then they otherwise would have been, the Commission's assumption is contrary to both theory and fact. In theory, costs will be somewhat higher by the capitalization method than by the expense method used by Hope in the past. This is obviously so because in the capitalization method interest or return on the amount capitalized must be included whereas in the expense method this is not so. In theory, therefore, Hope's rates in the early days (if they were determined in accordance with modern regulatory theories) were lower because they were determined on an

expense method as to the items in dispute than they would have been if they had been determined by the capitalization method.

Laying theory aside, the fact is that Hope's bookkeeping methods prior to 1923 had little to do with fixing rates. As previously shown in the Statement, *supra*, pages 6 to 9, Hope's largest customer, East Ohio, made its earliest contracts with Akron and Cleveland in 1898 and 1902 for ten-year periods in advance and in the case of Cleveland, East Ohio's largest customer, renewed it for a ten-year period in advance to expire in 1921. Hope also fixed its contract rates to East Ohio for ten-year periods in advance.

Thus until 1921, which covered practically all the period when well drilling and other costs were being charged to expenses, the rates to Hope's principal customer and the rates to East Ohio's principal customers were all fixed by long term contracts in advance. In fact the first ones were made for ten years in advance of any exact knowledge of what operating expenses would be. After these contracts were made it was a matter of no consequence to any one what items either East Ohio or Hope charged to operating expense. Consumers who were able because of these contracts to replace artificial gas containing 550 B.t.u. and costing certainly not less than 75c per M.c.f. with natural gas containing 1100 B.t.u. at 30c per M.c.f. were not concerned either with how much money the two companies made or how they kept their books.

These simple facts are a complete answer to all the assumptions and theories in the petitioners' briefs that consumers in the past paid items charged to expense on the books or paid higher rates than they otherwise would when as a matter of fact the rates were fixed long before the book entries were made.

The truth is that this "recoupment" theory is merely a thinly disguised attempt at retroactive regulation covering the past 44 years without going through the steps neces-

sary to proper regulation. Obviously what effect a different method of treating well drilling costs in any year prior to 1923 would have had on rates could only be determined by a careful determination of rate base and operating expenses for that year and similarly for other years. It cannot be determined merely on the assumption that a utility that made money from the natural gas business and from other sources has made enough over its entire history so that its well drilling costs have been "recouped." Such an assumption would be equally applicable to capitalized costs of any property.

Nor is it helpful to refer to the case of *Re Hope Natural Gas Co.*, P. U. R. 1921E, 418 (1921) (Opinion, R. I, 29). It is true that in that case, which concerned only rates in West Virginia, Hope, in accordance with its then accounting practice, included current well drilling costs in operating expenses and consistently did not capitalize past well drilling costs. Also, in repeated recent cases in Ohio Hope's well drilling costs have all been capitalized and the current well drilling costs excluded from expense (Smith, R. I, 283-284). Consistency was preserved in every case. There was no duplication of costs and no omission.

However, it is interesting to note that in this West Virginia case the West Virginia Commission found that for the years 1918, 1919 and the first six months of 1920 Hope failed to earn the return from its utility business fixed by the Commission by $1,100,000 per years (*ibid.*, 433). Here is a direct finding that at least in that thirty-month period prior to 1923 Hope was not recouping its drilling costs in addition to a fair return from its utility operations.

General statements as to Hope's earnings during this or any other period (Opinion, R. I, 34) are not a substitute for such necessary determinations because, as we have seen at page 10, *supra*, over its history Hope has had approximately $40,000,000 of earnings from other sources than its natural gas service. Also, a great portion of Hope's early natural gas sales were not to "rate payers" at all, but

were field sales to drillers, pumpers and others in West Virginia (Tonkin, Ex. 2, 2; Ex. 4, 50-51).

Had the Commission attempted to determine any "recoupment" as a matter of fact, that attempt would have forcibly illustrated that the rate making theories the Commission applied in fixing Hope's rate base in this case are wholly retroactive. Without making this necessary "recoupment" determination the Commission nevertheless eliminated these early well drilling and similar property costs from the rate base. Such retroactive rate regulation is not authorized under the Natural Gas Act and is obviously arbitrary under the Constitution.

This is not to say that there may not be particular cases where the principles of estoppel are applicable as to utilities' past accounting practices, as for example in *Los Angeles Gas & Electric Corp. v. Railroad Commission*, 58 F. (2d) 256. This and the other cases cited by the petitioners on this point are analyzed in Appendix C, page 174, *infra*. They lend no support to the Commission's retroactive determinations in this case. We have also set forth in Appendix B, page 159, *infra*, a number of court and commission decisions establishing that in the absence of particular estoppel it is wholly improper to eliminate property items from the rate base because they were in the past charged to operating expenses.

Additionally in *Board of Public Utility Commissioners v. New York Telephone Company*, 271 U. S. 23, at page 32, this Court said:

> "Customers pay for service, not for the property used to render it. Their payments are not contributions to depreciation or other operating expenses, or to capital of the company. By paying bills for service they do not acquire any interest, legal or equitable, in the property used for their convenience or in the funds of the company. Property paid for out of moneys received for service belongs to the company, just as does that purchased out of proceeds of its bonds and stock."

The application of this decision to the Commission's determination in this case is direct. When Hope included well drilling costs in operating expenses the effect was equivalent to the setting up of a 100% depletion or depreciation reserve on each well as drilled in each year, rather than accruing a depletion reserve on the basis of the production from that well spread out over a number of years. The Commission's decision here is in substance that Hope's future rates should include less return and a lower depletion charge than otherwise necessary because, in the Commission's view, Hope has charged excessive depletion amounts on these wells in the past. Hence Hope should furnish free to present consumers the annual use and annual consumption of its pre-1923 wells and other property. This is just what this Court condemned in the *New York Telephone* case.

The Commission itself recognized this principle in its treatment of Hope's depreciation reserve in this case. Commissioner Scott, dissenting from the Commission's Opinion (R. I, 80-89), advocated the deduction from the rate base of Hope's entire book depreciation reserve on the theory that it was built up of annual charges to expense and hence was "contributed by the customers," saying that he could "see no distinction between property which has been constructed by the company through charges upon the consumers by operating expenses labelled, for example, 'well drilling expense' and property which has been constructed by the company through charges upon the consumers by operating expenses labelled 'depreciation and depletion expense'." (Dissenting Opinion, R. I, 83). The Commission, however, recognized that where, as here, a "large part of the Company's business is brought under regulation for the first time" it is improper to deduct the book reserve (Opinion, R. I, 40).

In his concurring opinion Commissioner Manly pointed out the immateriality of past charges in a case such as this (R. I, 77-78):

"Attention should also be directed to the fact that, until the passage of the Federal Power Act in 1935 and the Natural Gas Act in 1938, the depreciation policies of both the electric utilities and the natural gas companies, as regards their interstate operations, were not subject to regulation. Under such conditions, while it is true that the amounts set up on the books as depreciation reserves were derived from revenues collected from customers, they did not, as under regulation, play a determining part in fixing the level of rates and the consequent amount of the revenues. Without regulation, the good old rule of 'What the traffic will bear' is controlling and depreciation policies are an afterthought, determined by the management and board of directors. It follows therefore that, during the pre-regulatory period, the customers would not have contributed any more or less to the company's revenues, regardless of what depreciation program was pursued."

What Commissioner Manly said as to Hope's prior depreciation practices is equally and exactly applicable to Hope's practice as to these well drilling and other costs. What charges it made on its books in the past were wholly immaterial to its customers or to others, and the effect retroactively given them by the Commission is wholly arbitrary.

It should be apparent from the foregoing discussion that the Circuit Court of Appeals was wholly correct in determining that the Commission should not have excluded these wells and similar property from the rate base whether that be fair value or original cost (R. IV, 184-189).

## C. THE RATE BASE ON WHICH THE COMMISSION'S ORDER RESTS DISREGARDS PRESENT VALUE AND IS CONTRARY TO THE NATURAL GAS ACT AND TO CONSTITUTIONAL REQUIREMENTS.

*(Com. Brief, 34-70; Cleve. Brief, 28-38, 56-59)*

### 1. The Commission Ignored the Present Value of Hope's Properties.

As we have seen, *supra*, pages 27 to 30, the Commission started its rate base calculation with the Staff's adjusted book cost of $51,792,000. It thus gave no consideration whatever to the estimates of reproduction cost new presented by the Company or as found by the Ohio Commission, or to the trended original cost. It took no judicial notice of the known increases in price levels during the last forty-five years. In other words it disregarded all evidence of present value and even evidence of the true original cost. Nowhere does it claim that its rate base reflects present value.

The judges below were unanimous in pointing out that the Commission made no attempt to ascertain and paid no attention to the present value of Hope's properties (R. IV, 172, 203).[22]

Before discussing the invalidity of such a rate base under the Natural Gas Act and the Constitution we point out that the Commission's failure to determine whether its rates permitted a fair return on present value cannot be justified on the ground that Hope's evidence was not entitled to any probative value and hence there was no other evidence than book cost. This is not a case in which

---

[22] The Commission's brief argues (pp. 43-44) that "There is no evidence that present value is greater than original cost." Quite so. The $69,735,000 original cost of Hope's properties is in excess of their present value, but the Commission's rate base does not use this original cost, or even that part of it included in its adjusted book cost, but deducts a revised depreciation reserve to arrive at a $31,000,000 result which no one can claim or has claimed is anything less than a fraction of the present value of Hope's properties determined on any reasonable basis.

the provision of Section 4(e) of the Natural Gas Act is applicable. It says (15 U. S. C. § 717 c (e)):

> "At any hearing involving a rate or charge *sought to be increased*, the burden of proof to show that the increased rate or charge is just and reasonable shall be upon the natural-gas company."

Here Hope sought no increased rate. On the contrary, complaints were filed against Hope's existing rates on the ground that they were unreasonable and in response thereto the Commission began its investigation. It follows that the burden of justifying these charges and supporting any reduced rates was upon the complainants or the Commission, and that the latter could make no order unless sustained by evidence of present value, if it be, as Hope submits, that both the Natural Gas Act and the Constitution require that rates permit a fair return upon present value. In such circumstances and in view of the fact that much of Hope's existing property was built before World War I it was the duty of the Commission or the complainants to introduce evidence of present value of the kind they believed convincing and the duty of the Commission to consider it.

Plainly, as the Circuit Court of Appeals said, it was also the duty of the Commission to take judicial notice of the greatly changed general price level, if present value is to be determined (R. IV, 180-181).

Moreover, the findings that original cost, trended original cost and reproduction cost as presented by Hope are all without "probative value" (see R. I, Findings (7), (8), (9) and (10)) obviously mean no more than that the Commission rejected and disregarded all evidence as to rate base other than the Staff's adjusted book cost. In note 6, page 9, of its Opinion (R. I, 23) the Commission says that under the *Natural Gas Pipeline* decision—

> "such estimates of reproduction cost and trended 'original cost' need not have been admitted in evidence."

We turn then to the question of the validity under the Natural Gas Act and the Constitution of a rate base which is less than present value.

## 2. The Natural Gas Act Requires a Rate Base Not Lower Than Present Value.

*(Com. Brief, 36-39; Cleve. Brief, 28-34)*

Under the Natural Gas Act Congress intended the rate base to be no lower than present value. This most clearly appears in Section 6, which provides as follows (15 U. S. C. Sec. 717e):

> "Ascertainment of Cost of Property"
>
> "Sec. 6 (a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, *when found necessary for rate-making purposes, other facts which bear on the determination of* such cost or depreciation and *the fair value of such property.*
>
> "(b) Every natural-gas company upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction."

It will be observed both from the title and the provisions of this section that it is not limited to rate-making. Both the statement of "original cost" and the determination of "actual legitimate cost" which are referred to in Section 6 may be useful to the Commission for accounting, depreciation and other purposes as well as rate making.

Section 6(a) also authorizes the Commission to investigate and ascertain "when found necessary for rate-making purposes, other facts which bear on the determination of * * * the fair value of such property." Thus when rates are to be fixed the Commission is not only to investigate and ascertain "actual legitimate cost" but

other facts which bear on the determination of the "fair value" of such property. The Commission is thus to determine fair value having before it actual legitimate cost and other facts evidencing fair or present value.

Of these sections the Circuit Court of Appeals said (R. IV, 175):

> "It was clearly the intention of Congress that under these sections the Commission might investigate and ascertain cost and depreciation of properties of natural gas companies, irrespective of whether a rate inquiry was involved or not, and that, where rate making was involved, the investigation might extend to other facts which bear on cost or depreciation and the fair value of the property. Instead of prescribing a change in the method of determining the rate base, it is clear that the statute contemplates that the base should be determined in accordance with existing legal rules; and it is basic in these rules that the present fair value of the property be ascertained so that rates may be established which will afford a fair return upon fair value and so will not be confiscatory in the constitutional sense. This we understand to be the construction given the Act in the recent case of *Federal Power Commission v. Natural Gas Pipeline Co.*, 315 U. S. 575, 585, 586, * * *."

The legislative history of the Natural Gas Act supports the construction placed upon it by the Court of Appeals. Appendix A beginning at page 141 of this brief shows the complete legislative history which we shall briefly summarize:

The Public Utility Act of 1935 as originally introduced (Senate Bill 1725 and House Bill 5423, 74th Congress, 1st Session) included a provision as to rate base applicable both to Title II of the Act which was the Federal Power Act and to Title III which regulated natural gas companies. Section 211, subparagraph (a), gave the Commission power to ascertain "the actual, legitimate, prudent cost of the property of every public utility" and subparagraph (c) provided that the Commission "shall fix such rate as will

allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question." As originally introduced it was designed to make prudent investment the rate base.

The Senate Committee on Interstate and Foreign Commerce reported out a revised version of the Public Utility Act of 1935 (S. 2796) omitting Title III, relating to natural gas companies. The section referred to above was renumbered Section 208 and, as introduced and passed by the Senate, still referred only to the "actual legitimate cost of the property." The House Committee on Interstate and Foreign Commerce substantially amended the Senate Bill (S. 2796) and changed what had now become Section 208 of the Federal Power Act to read precisely as Section 6(a) of the Natural Gas Act now reads except that it referred only to electric companies and not to natural-gas companies.

The Chairman of the House Committee in explaining the change in the Senate Bill said (see Appendix A, p. 149 below):

> "After the recent decision of the Supreme Court in a Maryland telephone case it is practically a futile thing, in my judgment, for any legislative body to try to write a rate-making base. * * * we have provided that rates shall be reasonable and just, and under the Supreme Court decision that means that the valuation must be based upon the current value of the property.
>
> "Cost is an element of the rate base, but only an element. The cost of reproduction might be an element, but only an element. The one question is the current value of the property, and the Supreme Court will permit no deviation from this principle." (Congressional Record, Vol. 79, Part 9, p. 10378, 74th Cong., 1st Sess.)

The Maryland telephone case referred to above was *West v. The Chesapeake & Potomac Telephone Co.*, 295 U. S. 662. In that case the Maryland Commission attempted to arrive at a rate base by adjusting historical cost by

means of general commodity price indices. The District Court reversed its order and itself arrived at a rate base by taking the book cost to the time of its determination, deducting the book depreciation reserve and adding an allowance for working capital. This Court held that neither the Commission nor the District Court had arrived at a figure reflecting present value and affirmed the lower court's holding that the order made was confiscatory and invalid.

Certainly the majority opinion adhered to the fair value rule and the minority opinion approving the Maryland Commission's rate base was predicated on the view that the Commission was being condemned for the method it used (trended prices) and not for the confiscatory result. After criticizing replacement value Mr. Justice Stone said, 295 U. S., 692:

> "Present fair value at best is but an estimate. Historical cost appropriately adjusted by reasonable recognition of price trends appears to be quite as common sense a method of arrival at a present theoretical value as any other."

This case was decided immediately prior to the passage of the Federal Power Act. It was a case which the members of the Committees had studied and to which the Chairman of the House Committee expressly referred in the quotation previously given. Not only that but Congressman Cole, a member of the House Committee, in the debate on the bill said (Appendix A, pp. 150-151 below):

> "The bill was originally drawn on the theory that for the purpose of just and reasonable rates the Commission should determine the actual and prudent cost of the property less accrued depreciation thereon. Mr. Justice Roberts, in delivering the opinion of the Court in the Telephone case, *supra*, made it very clear that such a provision would be unconstitutional and it was therefore stricken out. In lieu thereof there is new language and while that may not be entirely clear, it was inconceivable to those of us serving on the sub-

committee that any State or National commission establishing valuation of a public utility for rate purposes should do other than follow the very clear formula or standard now established by the Court. No one consideration alone as to value such as legitimate cost or prudent cost, is sufficient; but all elements must be taken into account, such as reproduction value, actual cost, going value, proper depreciation allowance, so that in the end, after considering the aforegoing and such other elements of value as are essential, leave a figure upon which the rate established thereon will not be confiscatory."

The petitioners apparently consider significant the initial failure of the Senate to adopt Senator Bailey's amendment requiring the use of "fair value" as the rate base (Com. Brief, 38; Cleve. Brief, 30). Clearly this means nothing, since the Bill as passed by the Senate four days later, on June 11, 1935, expressly provided for an actual legitimate cost rate base. Subsequently, in August, 1935, this was changed when the Senate concurred in the House amendment adopting the language in the present act.

To complete this history it only need be added that when the Natural Gas Act was later passed in 1938 Section 6 was taken directly from Section 208 of the Federal Power Act. The only change made was in substituting "natural-gas companies" for "public utilities" which latter meant electric power companies.

Thus it is plain that Congress by Section 6(a) of the Natural Gas Act did not authorize the Commission to fix a rate on the basis of depreciated book cost or depreciated actual legitimate cost, unless those under the circumstances reasonably reflected the present value of the property.

### 3. This Court Has Long Construed the Constitution As Requiring Utility Rates, However Fixed, To Allow at Least a Fair Return on Present Value and That Construction Should Not Be Reversed.

*(Com. Brief, 40-70; Cleve. Brief, 56-59)*

This Court itself has so often considered this matter, and Judge Parker for the Circuit Court of Appeals has so cogently and forcefully stated the legal basis and the reasons for the continuance of the present value rule (R. IV, 172-184) that we do no more than call the Court's attention to the precise issue that is presented and the principal reasons urged by the petitioners for changing the present value rule.

The Circuit Court of Appeals' decision on this point rests on the precise ground that the Commission "could not absolutely ignore the fact of increased price levels" in determining Hope's rates (R. IV, 181). It did not require the Commission to use reproduction cost or trended original cost or any price trends or any other specific formula. The discussion in the Commission's brief (pp. 42-49) under the heading "The Court Below Erred In Requiring That Price Trends Be Utilized in Determining The Rate Base" is beside the point. The Commission was left free to determine present value by any reasonable method it chose, including "investment cost" if this were "a true measure of the present value of the property notwithstanding increases in prices" (R. IV, 180).

#### (a) The Legal Basis of the Present Value Rule Is Sound.

The legal basis of the present value rule rests on three simple propositions:

(1) The property is held in private ownership; (2) the Constitution protects the property, not its cost, against confiscation, and (3) on the analogy of eminent domain there is a taking of property when the owner who is re-

quired to use it up for the public is denied a fair return and depreciation thereon. Those principles have been announced in many cases, most clearly in *The Minnesota Rate Cases*, 230 U. S. 352, remained the legal basis of the rule at the time of adoption of the Natural Gas Act (see *West v. Chesapeake & Potomac Telephone Company*, 295 U. S. 662, 671), and certainly have never been rejected in any subsequent decision.

The petitioners do not deny propositions (1) and (2) but they claim that the analogy of eminent domain is inapplicable to rate regulation which should rest solely on the broader principle underlying other price fixing. It is said that the regulation of rates is not a "taking" but is a mere restriction of the owner's use and enjoyment of his property similar to many other regulations, while "eminent domain is the power to command a sale" (Com. Brief, 60).

Nothing could better describe the regulatory power of the government over utilities such as Hope than the "power to command a sale." While this is not the sole difference, in ordinary price and other regulation of businesses which are not utilities the owner of the business is free to continue the operation of the business, or not, as he sees fit, and is free to sell his commodity, or not, as he sees fit. Not so the utility. It is required by law to continue its business unless the government permits it to stop.[23] It is required

---

[23] Natural Gas Act, Section 7(b) (15 U. S. C. Section 717f (b)):

"(b) *No natural-gas company shall abandon all or any portion of its facilities* subject to the jurisdiction of the Commission, *or any service rendered* by means of such facilities, without the permission and approval of the Commission first had and obtained, after due hearing, and a finding by the Commission that the available supply of natural gas is depleted to the extent that the continuance of service is unwarranted, or that the present or future public convenience or necessity permit such abandonment."

(*Continued on next page*)

by law to continue to make sales of its product or service to customers who apply.[24] In this case Hope is certainly commanded to sell its gas. Thereby there is in each year taken for the public use all its property consumed in that service and the use of the remainder, for which just compensation must be paid.

After reviewing the legal basis of the present value rule Judge Parker in this case said (R. IV, 177-178):

> "Property has no value except present value. Past value exists only in memory or in history, future value only in estimate or expectation. It is the property presently existing which belongs to the utility and is used by the public. It is that property which is depreciated through use and which is gradually being sold through depreciation to the public. And it is the value of that property as used which must be consid-

---

(*Continued from preceding page*)

Note the mistaken statements denying government compulsion on Hope to continue its service appearing in the Commission brief's footnote 25 (p. 62). The non-eminent domain cases there cited deal with the duty of a father to support his child, the liability of a person who voluntarily undertakes to do something for another, and the liability of a contracting party to a third party beneficiary. They have nothing to do with the legal compulsion on a utility to continue service.

[24] Natural Gas Act, Section 7(a) (15 U. S. C. Section 717f (a)):

> "(a) Whenever the Commission, after notice and opportunity for hearing, finds such action necessary or desirable in the public interest, *it may by order direct a natural-gas company to extend or improve its transportation facilities*, to establish physical connection of its transportation facilities with the facilities of; *and sell natural gas to*, any person or municipality engaged or legally authorized to engage in the local distribution of natural or artificial gas to the public, and for such purpose to extend its transportation facilities to communities immediately adjacent to such facilities or to territory served by such natural-gas company, if the Commission finds that no undue burden will be placed upon such natural-gas company thereby: *Provided*, That the Commission shall have no authority to compel the enlargement of transportation facilities for such purposes, or to compel such natural-gas company to establish physical connection or sell natural gas when to do so would impair its ability to render adequate service to its customers."

ered in fixing rates that will reimburse the company for its partial sale through use and provide an adequate return upon investment. * * * It must not be forgotten that it is the property owned by the utility, and not the cash invested by stockholders in its stock, that is devoted to public use; that this property is worn out in furnishing the service which the public receives and which the utility is bound to render; and that, unless the utility receives a rate sufficient to make necessary replacements at current prices with a fair return upon the present fair value of its investment, its property is being taken from it and given to its customers."

The legal basis of the present value rule including the requirement of just compensation on analogy to the taking of property under the power of eminent domain is sound.

The difficulties in the administration of the present value rule are not due to any unsoundness in this legal basis but are due entirely to another matter. For reasons familiar to all the dollars to be used in a rate base to represent present value can not be determined in the ordinary way. A reasonable substitute is necessary. If it be conceded that the usual formula that has been applied which includes reproduction cost has not always worked well as a measure of present value, that practical difficulty does not justify utter disregard of present value. There is not always an easy road to protection of fundamental civil rights, either of liberty or of property. Certainly it does not justify the usual line of reasoning evidenced throughout the Commission's brief and its Supplement, namely that since reproduction cost has not worked well therefore "prudent investment" should be adopted. An infirmity in a particular method of arriving at the dollars to represent the present value of the property does not change the fundamental legal basis that it is still privately owned and that the Constitution does not permit it to be taken either by way of eminent domain or by compulsory sale through compulsory service without just compensation.

In this connection it may be observed that the method of fixing a rate employed by the Commission in this case is based on a practical denial that the property is privately owned. The theory appears to be that consumers gradually acquire ownership of a utility through depreciation or other charges in the rate and that when these charges equal the cost of the property, no matter how low that cost may have been, the utility is not thereafter entitled either to return or depreciation on that property. Thus it says (Com. Brief, 83):

> "There is no principle which would entitle it [Hope] to a continuing return on an item of property whose cost has been fully recovered from the rates received, and which thus does not represent an investment, even though the property involved remains in use."

That is to say when a company, through depreciation charges or other operating expenses has "recouped" its original cost, from that time forward it is required to continue to operate the properties but is no longer entitled to any return. This is but another way of saying that the property is now owned by consumers and not by the utility.

Nothing this Court said in the *Natural Gas Pipeline* case in any way supports this novel view of the petitioners or denies the common sense legal basis of the present value rule. In fact the rates before this Court in that case had been fixed upon a reproduction cost new rate base.

Nor is there anything to the contrary in *Nebbia v. New York*, 291 U. S. 502 (Com. Brief, 63), which was decided one year earlier than *West v. Chesapeake & Potomac Telephone Company, supra*, page 57. The opinion of the Court in each case was written by Mr. Justice Roberts and neither his opinion in the latter case nor that of the minority found any necessity for even referring to the *Nebbia* case. The controlling principles in the two cases are obviously different. In the *Nebbia* case no maximum price was fixed, but merely a minimum price, and so far as the governmental

regulation was concerned, anyone was free at will to charge more than this minimum price or not to sell at all. This distinction was clearly pointed out in the related case of *Hegeman Farms Corp. v. Baldwin*, 293 U. S. 163, where Mr. Justice Cardozo said:

> "* * * For an understanding of the complainant's position both in its economic and in its legal aspects, the fact is of critical importance that there has been no attempt by the Board to fix a maximum price in respect of any of the transactions subject to its regulatory power. What is fixed is a minimum only. None the less, the competition among dealers is so keen that in practice the legal minimum is the maximum that the appellant is able to charge. * * *" (p. 169)
>
> "* * * The Fourteenth Amendment does not protect a business against the hazards of competition. *Public Service Comm'n v. Great Northern Utilities Co., supra*, at p. 135. It is from hazards of that order, and not from restraints of law capriciously imposed, that the appellant seeks relief. The refuge from its ills is not in constitutional immunities.
>
> Much is made of a supposed analogy between the plight in which the appellant finds itself and that of public utilities subjected to maximum rates that do not yield a fair return. But the analogy, when scrutinized, is seen to be unreal. A public utility in such circumstances has no outlet of escape. If it is running its business with reasonable economy, it must break the law or bleed to death. But that is not the alternative offered where the law prescribes a minimum. An outlet is then available to the regulated business, an outlet that presumably will be utilized whenever use becomes expedient. If the price is not raised, the reason must be that efficient operators find that they can get along without a change. * * *" (pp. 170-171)

None of the other cases cited by the petitioners support their view that utility rates are constitutionally "reasonable" and not "arbitrary" when they produce less than a fair return on present value. These cases deal with oleomargarine, smoke control, obstructions upon navigable

waters, fish conservation, fire prevention, rationing and the like[25] (Com. Brief, 60-63; Cleve. Brief, 56-59). We know of no case where *maximum* prices have been fixed and it has not been held that upon judicial test inquiry should be made whether just compensation is allowed, except perhaps in war emergency anti-inflationary price regulation where no requirement is made that the vendor continue to sell. Cf. *Wilson v. Brown*, 11 Pike and Fischer OPA Service 612:17 (Emergency Court of Appeals, July 15, 1943).

**(b) Considerations Urged by The Commission to Justify the Application of its Particular Rate Making Theories Regardless of Whether its Rates Allow a Fair Return on Present Value Are Unsound.**

The Commission insists that it be permitted to use depreciated original cost even where it can not on any reasonable basis find that the resulting rate base is at least equivalent to present value or that its resulting rate is sufficient to allow at least a fair return on present value. In the case of utilities constructed in whole or in large part at the higher level of prices prevailing since World War I present value and depreciated original cost will frequently coincide for all substantial purposes. The Commission, however, insists upon the right to say that even when this is not true depreciated past costs shall control. To cite an extreme case, it insists that if Manhattan Island

had been acquired from the Indians by a utility and continuously thereafter devoted to public service, it could now go into the rate base at $24.

In support of this view it urges a number of considerations (Com. Brief, 64-70; Com. Brief's Supplement, 66-89) under the proposition that "We submit that an acceptable and reasonable formula is the prudent investment standard adopted by the Commission" (Com. Brief, 64).

It is important to note that the "prudent investment standard" and the "prudent investment basis of rate regulation," as these terms are used by the various writers cited in the Commission's brief and in its Supplement, are not descriptive of the rate base and method of fixing rates which the Commission in fact employed in the present case. This fact is perfectly illustrated by the Commission's repeated references to experience in Massachusetts and California as demonstrating that its own mislabelled rate making theories are "sound and workable" and have been adopted by "many experienced regulatory bodies" (Com. Brief, 65). To this experience we first turn.

(1) **Experience.** While the phrase "prudent investment" originated in Massachusetts[26] the fact is that Massachusetts has never applied what various writers now call the prudent investment method of regulating rates, and it has certainly never applied the theories which the Commission applied in the present case.

Professor Irston Barnes in his book "*Public Utility Control in Massachusetts*," from which citations are made below, analyzed the claims as to the success of the Massachusetts system. He found:

---

[26] The term "prudent investment" originated in Massachusetts because the Commission of that state fixed rates on the amount of money stockholders had "honestly and prudently invested" in a utility although this was more than the then value of its property. In other words, the phrase was coined to justify including in rate base sums in excess of present value, and not vice versa. Wells, *Proceedings of the N. A. R. U. C.*, 1927, pp. 113-114.

(a) In practice the Massachusetts Commission has rarely determined either the prudent investment or any other rate base and nowhere explains how to do it (*Ibid.*, pp. 105, 106, 118, 143, 145, 147, 149).

(b) The small amount of litigation involving the Massachusetts Commission decisions is due to the extremely liberal treatment usually accorded utilities in that state. Of this Professor Barnes says:

> "The normal conclusion must be that the utilities have in the past received more liberal treatment from the Massachusetts Commissions than they could have expected from an appeal to the Federal Courts" (*Ibid.*, p. 206; also pp. 138, 139.)

(c) The outstanding characteristic of Massachusetts regulation is its method of determining fair return. The Massachusetts law requires a utility to sell stock to finance its requirements at not less than par. The result of this has been that the Massachusetts Commission has allowed utilities to earn sufficient money so that their stocks will sell always above par. Professor Barnes says "usually from 20 to 25 points above." (*Ibid.*, p. 154, also pp. 155, 173, 213.)

It is apparent from this statement that however successful the Massachusetts method may be it is not in any sense an application of the method used by the Commission in this case.

California has often been referred to in this Court and elsewhere as the leading exponent of the prudent investment method of regulating rates. We say regulating rates because as will be developed the prudent investment doctrine is not merely a method of determining rate base but a method of determining rates in such a manner as to avoid as many as possible of the troublesome disputes that have plagued rate litigation.

As to the California method it is thus stated by the California Commission:

"During its entire history in establishing reasonable rates for utilities similar to this company, to determine a proper rate base this Commission has used the *actual* or *estimated historical costs* of the properties *undepreciated*, with *land at the present market value*. Consistent with this, it has used the sinking fund method to determine the allowance for depreciation to be included in operating expenses.

"This historical method has dominated the Commission's findings for several principal reasons." (quoted in *Railroad Commission of California v. Pacific Gas & Electric Co.*, 302 U. S. 388, 395.)

As to the reasons for using an undepreciated rate base and the sinking fund method of determining the annual allowance for depreciation expense, the California Commission says:

"As this Commission has frequently pointed out, such conflicts and inconsistencies as have been discussed herein in the treatment of depreciation in rate cases may be avoided by the use of the sinking fund method. No estimate of the highly controversial issue of accrued depreciation is needed in this method, the undepreciated property value being used as the base. The amounts accrued are in most properties, as in this Company, invested in the property and with a reasonable interest return thereon are sufficient to replace the property at the end of its estimated useful life. The method has been followed for many years by this Commission." (*Los Angeles v. Southern California Telephone Company*, 39 Cal. R. Com. 739, 14 P. U. R. (N. S.) 252, 275 (1936).)

It will thus be observed that the rate base is the actual or, if necessary, the estimated historical cost undepreciated with land at market value. On this the full rate of return is allowed. In addition there is included in operating expenses an allowance for depreciation calculated on the sinking fund method.

As to the amount of the annual depreciation allowance, the California Commission has said:

"The depreciation annuity which this Commission found reasonable in 1916 was equal to 1.54 per cent of the rate base excluding materials and supplies and working cash capital. The depreciation annuity which has been allowed by the Commission in the various decisions since then has averaged practically the same amount. The depreciation annuity so determined is based upon a 6 per cent sinking fund and represents the estimated amount which, set aside annually with compound interest at 6 per cent, will be sufficient to cover the original cost of the various units of property at the expiration of their probable life." *San Joaquin Light & Power Corporation*, 21 Cal. R. Com. 545, P. U. R. 1922D 595, 625 (1922).

In more recent cases the allowances have substantially conformed with this 1½% (See *Pacific Gas & Electric Company*, 39 Cal. R. Com. 49, 1 P. U. R. (N. S.) 1 (1933); *Los Angeles v. Southern California Telephone Company*, 39 Cal. R. Com. 739, 14 P. U. R. (N. S.) 252 (1936)).

As to the rate of return the California Commission early adopted this principle:

"The Commission in fixing a rate of return must be liberal, lest too strict a policy result in turning capital to other fields of enterprise. California needs development by public utilities, and this Commission's policy should be a broad and liberal one, so as to encourage capital to develop the state by legitimate public utility enterprises where needed." (*City of Palo Alto v. Palo Alto Gas Company*, 2 Cal. R. Com. 300, 317-318 (1913).)

In applying this policy it has always given great weight to the historical cost to the utility of its capital but has added something to cost for profit. In justification of this the Commission has said:

"In this consideration, the same logic that justifies consideration of the reasonable historical cost of property for a utility such as this one, as the fairer basis for determination of rates, applies as well to the question of fair return. If the reasonable historical cost shall be used as the rate base, then it is apparent that

a fair return determined on the basis of present yield of securities, as suggested by Dr. Maltbie, is not applicable. Greater consideration should be given to the historical cost of moneys, though this alone should not be the measure." (*Application of Pacific Telephone and Telegraph Company*, 33 Cal. R. Com. 737, 772-773, P. U. R. 1930C 481, 513 (1929).)

As to the amount of this return the Commission, writing in 1921, said:

"The Commission in fixing rates for utilities, such as applicant, has generally found that 8 per cent was a reasonable return under conditions prior to 1918. Since January 1, 1918, money invested in property of this applicant has cost from 7 per cent to 8 per cent, and if a utility is to continue to meet its obligations and attract capital it must be expected that some profit on its enterprise be allowed in addition to the bare cost of the money invested. If we consider a return of 8 per cent as reasonable upon money invested prior to January, 1918, and 9 per cent on the money invested since that time, we find that the average rate of return upon the present investment in operative property in 1921 would be 8.3 per cent, * * *." (*Application of Southern California Edison Company*, 19 Cal. R. Com., 595, 603, P. U. R. 1921D 63, 75.)

Consistent with its theory the California Commission in recent years has fixed a somewhat lower rate of return than formerly although we know of no case in which it went below 7% on the undepreciated historical cost and this in the case of the *Pacific Telephone and Telegraph Company*, 33 Cal. R. Com. 737, P. U. R. 1930D 481 (1929).

Thus the essential features of the California method are these:

(1) An undepreciated historical cost rate base; actual if possible, estimated if necessary.

(2) Annual depreciation expense fixed on a sinking fund method at a sinking fund rate somewhat lower than the rate of return. Thus, the interest charge on the depre-

ciation reserve must be added to the reserve by the utility from its return.

(3) A liberal rate of return somewhat above the historical cost of capital to the utility.

This we suggest is the prudent investment method of regulating rates which Mr. Justice Brandeis advocated in his classic exposition in the *Southwestern Bell Telephone* case. His rate base was to be original cost corrected by historical cost if necessary, and presumably undepreciated since he did not mention depreciation and since his principal object was to avoid as many as possible of the troublesome questions in rate-making. Of equal importance in his mind was the fact that the rate of return was to be determined on the basis of the capital cost of money to the utility and not on the basis of costs current at the time of regulation. (*State of Missouri ex rel. Southwestern Bell Telephone Co. v. Public Service Commission*, 262 U. S. 276, 304-308 (Brandeis, J., concurring).)

As an illustration of the California method we take the case of *Los Angeles Gas & Electric Company v. Railroad Commission*, 289 U. S. 287.[27]

The Commission found a historical cost of $60,700,000. This was made up of a rate base established by the Commission in 1917 "upon a valuation made by the Commission's engineers as of October, 1915" (p. 292) to which was added net additions and betterments as entered upon the company's books. Land was taken at current values (pp. 292-293). No accrued depreciation was deducted. Both the Commission and the company introduced evidence of reproduction cost and accrued depreciation and on the basis of this evidence the Commission found a fair value (undepreciated) of $65,500,000 (p. 298).

---

[27] In the dissenting opinion of Mr. Justice Stone in *West v. The Chesapeake & Potomac Telephone Co.*, 295 U. S. 662, at 693, this case was referred to as one in which the California Commission "made its valuation on the basis of prudent investment."

As a depreciation annuity the Commission allowed $1,072,000 equivalent to 1.7% of the historical cost rate base (p. 303).

By way of return the Commission allowed a sum equal to 7.7% on the historical cost rate base or 7% on the fair value rate base, both undepreciated (p. 292). While the company was engaged in both the natural gas and electric business it was the natural gas property that was involved in this case.

As we develop later in this brief, if the California method were properly applied to Hope its rate base would have been double that used by the Commission and its permissible earnings more than double (*infra*, pp. 114-115). For present purposes we content ourselves with pointing out that the Commission method of regulating rates does not bear the slightest resemblance to the prudent investment method of Mr. Justice Brandeis or as practiced in California. It does not take an undepreciated rate base. It purports to estimate accrued depreciation and in this case has grossly over-estimated it. It does not recognize the historical cost of money but fixes the rate of return on a basis that is less than current cost of capital to natural gas companies.

The only additional experience cited in the Commission's brief is that of the Commission itself and so far, except for Hope, it has dealt only with companies like its water power licensees or with the western natural gas pipe line companies. All of these properties have been constructed within recent years and at price levels where original cost will approximate a fair reproduction cost.

We submit that there is no experience anywhere under the rate-making method used by the Commission in this case.

(2) **Accuracy**. The Commission argues that its depreciated cost rate base can be determined "expeditiously, accurately, and to a degree of exactness that leaves

substantially little ground for conflict" (Com. Brief, 65). In this case the parties are in violent conflict over original cost and over the determination of accrued depreciation. While here there is no question but that all expenditures were prudently made it is not idle prophecy that violent and prolonged conflict could easily arise over that issue. In fact such an issue appeared in the case of the manufactured gas equipment in the *Los Angeles Gas* case, *supra*, page 72. Indeed the necessity for determining today whether a certain action was prudent at a prior time, from which hindsight cannot be wholly excluded, is bound to result in numerous controversies.

Moreover the dollars that will be set down for original cost with such "delusive exactness"[28] will not state with even remote accuracy the true or economic cost of the property or the sacrifice the owner made to construct it. Certainly the dollar is not what it used to be in exchange value or in purchasing power. Only its symbol remains the same.[29] When, therefore we set down the figures as

---

[28] Mr. Justice Holmes in *City of Louisville v. Cumberland Telephone and Telegraph Co.*, 225 U. S. 430, 436.

[29] For nearly 100 years prior to 1933 a dollar was the right to receive 23.22 grains of fine gold. The exchange value of that gold expressed in other commodities has varied widely over the years due principally to fluctuations of other commodities, but to some extent due to fluctuation of gold. In 1933 the quantity of gold in a dollar was changed to 15-5/21 grains, only .9 fine. More recently when specie payment was suspended it ceased to be the right to receive anything in gold. Whether the dollar of the future will be tied to gold or to commodities no one can say.

It is clear that for every dollar Hope spent in the construction of property prior to World War I it gave up the right to demand 23.22 grains of fine gold. The physical properties for which it exchanged this right to gold were placed at the service of the public. What justification would there be for measuring Hope's rights by the fluctuating value of fine gold which Hope exchanged for its property, instead of measuring it directly by the present value of the land, pipe, and other property for which Hope made the exchange? The pipe, not the gold, is devoted to

(*Continued on next page*)

to dollars originally spent in the construction of Hope's property in every year from 1898 to date it gives an appearance of accuracy when in fact it merely represents widely varying exchange values of the dollar over a long period of years.

The truth is that it is no more difficult to estimate with substantial fairness the present value of the property devoted to service than it is to estimate the present economic value of the original dollars that were exchanged for the property. *To use merely the sum of the dollars originally spent, in utter disregard of their economic value, is merely to avoid and not to solve the problem.* Certainly Constitutional protection of property rights disappears if the courts shut their eyes to what every man on the street knows—that the dollar today is worth only 50¢ of the dollar several decades ago and that the dollar of the future may be worth even less.

(3) **Stability.** The Commission argues that original cost provides a stable rate base (Com. Brief, 66) and that this stability will appeal to investors. We suggest "inflexibility" is a more suitable word than "stability" to describe this attribute.

Rates have been fixed on the basis of present value for about 50 years. We know from this experience that this method has attracted capital to public utility enterprises until today they are more fully developed in the United States than in any other part of the world. The cost of service is lower here than in any other part of the world. Securities of public utilities have attracted both private and

---

(*Continued from preceding page*)

public service. But the original cost basis does not even measure Hope's rights by the dollars it exchanged, which represented 23.22 grains of fine gold, nor yet by the dollars represented by 15.15/21 grains of gold, not so fine, but by present day dollars that have much less exchange value than even 15 grains of gold. (See article in forthcoming (October) issue of *Michigan Law Review* by Thomas L. Long of Detroit.)

institutional investors to the extent of many billions of dollars. It would, of course, be as wrong to claim that this is all due to the present value rule as it would be to claim that the present value rule had no part in this development.

One reason, we suggest, for the persistence of the rule through periods of depression and prosperity has been its flexibility. The Commission now proposes to substitute for this an absolutely inflexible rule, to be applied to all utilities, electric, gas or other, old or young, which it is said will always be fair to both consumer and investors and will protect the consumers from paying more than a return on investment and the investors from "depreciation in value during times of depression."

Here is defiance to ordinary economic laws. If deflation occurs and prices go down the utility is still to have a rate base higher than the current value of its property. This can only mean that consumers in such periods are to pay the same dollars as before, although they have fewer dollars and should pay less. On the other hand, if prices rise the consumer is to be protected from paying higher rates even though his wages have risen along with all other prices. This means utilities and their owners, at a time when the consumers are fully able to pay higher rates, must nevertheless suffer.

If we are practical we recognize that over a long period of years, in spite of periods of deflation followed by periods of inflation, the world wide trend of prices has been up. Part of every inflation becomes permanent. But suppose, as many well informed persons now fear, with an already high level of prices we have further serious inflation. In the case of a utility plant it now costs about $2 to build what prior to World War I was built for $1 (Ex. 20, R. I, 207, col. (6)). Suppose in the future it takes $5.

Under these circumstances the rigid rate base based on the $1 and $2 costs would effectively destroy a large part

of the present investment in the public utility industry. There is no way out. If the owners of utility equities—and this includes not only millions of private investors but insurance companies, banks, colleges and other institutional investors—are only permitted the opportunity to earn on the number of dollars originally invested at a time when those dollars have only 1/5th or 2/5ths of their former purchasing power, the effect will be to reduce the value of all such investments by 4/5ths or 3/5ths.

The truth is that this so-called "stability" in the original cost rate base is not a virtue but one of its most serious vices. It is a strait-jacket, which is never a cure.

Public utilities in the future will have to do business on the basis of the future value of the dollar. It is these dollars that they will collect from their customers and that they will use for the payment of wages, operating expenses, taxes and other charges. It is with these dollars that they will have to replace worn out property. If replacement costs are two or three times original cost and the utility's annual allowance for depreciation has been based only on original cost, then the utility must either sell capital securities merely to keep going, if it can, or face bankruptcy. Under such circumstances there is not the slightest justification for requiring the owners of utilities to get a return based on pre-World War I dollars or on any other than those currently in use in the commercial world.

Plainly a strait-jacket on a rate base in an economic system where prices and values are constantly fluctuating is neither desirable nor reasonable.

(4) **Investor Appeal.** The Commission argues (Com. Brief, 66):

> "A basis of rate regulation which maintains the Company's financial integrity and permits it to raise the required capital cannot be deemed arbitrary."

No support of any kind is given for this assumption as to financial stability except a reference to practical experience

in California and Massachusetts. As we have seen, *supra*, pages 67 to 73, the method of rate regulation in California and Massachusetts is so wholly unlike anything the Commission has done in this case that successful experience there gives no support to the Commission's theories in this case.

The Commission's statement, however, recognizes what this Court has always recognized, namely that any scheme of rate regulation that will not continue to attract private capital to public utilities is unreasonable and must fail.

We know from long and successful experience that the present value rule has attracted capital to public utility enterprises at reasonable costs. What assurance does the Commission's method as applied in this case give that it will continue this record?

To simplify the problem let us consider the position of an individual who is contemplating the construction of a public utility. He will be told that that part of his dollars afterwards judged to have been "legitimately" spent will be included in the rate base; that the rate base will never reflect changes in price levels either up or down; and that on that rate base he will be entitled to receive a return and an allowance for depreciation, if successful operation permits rates high enough to cover those amounts. According to the further theory of the Commission in this case, when the total depreciation charged equals the cost of the property he will thereafter no longer be entitled to any return or depreciation (Com. Brief, 83, 105-106).

What he will be told about the measure of the rate of return is not clear. The Commission's brief advocates a rate of return based on "current costs of capital" on page 66, but in a note on page 67 it says:

> "And if some account must be taken of the factor of increasing prices as bearing upon the instability of investment, this may readily be accomplished by altering the rate of return."

In the present case, however, the Commission actually fixed a low rate of return on the basis of current costs of capital and disregarded the greatly increased price level.

Thus on the Commission's theory as here applied (1) the utility owner will be permitted, if he can, to earn a return on the dollars invested, less accrued depreciation, and (2) at a rate of return based on future money market conditions. The utility owner has not the slightest chance for a profit to compensate him for the risks of loss that he runs.

He is asked to lend his money without any obligation or security for the payment of interest (return) or for the repayment of principal. He will get his return and a restoration of that part of his investment "legitimately" made only if the enterprise is successful. By no possibility can he get more than his investment, plus return and he may lose it all as did many investors in interurban and street railways.

It does no good to argue that a public utility with a return of 6½% can issue bonds at 3% and thus pay a much larger return upon its common stock. Every dollar issued in bonds increases the risk of the common stock and so increases the return necessary on it. The rate of return is fixed having in mind the over-all cost of capital to the particular utility including money raised by the sale of bonds and the sale of preferred and common stocks. For purposes of present argument we must assume that the rate will fairly represent the composite risk of all. So considered this Commission theory assumes that an investor in common stocks will accept the terms of a bond *minus* the security that a bond offers and *minus* any obligation either to return his money at any time or to pay a stipulated return.

He can not even contemplate a continuance of the rate of return upon the basis of which he was originally asked to supply funds. His unsecured investment is subject to the still further risk of a future reduction in rate of return

based on then current money rates, which when applied to a then depreciated dollar gives him but a fraction of the economic return he anticipated when he originally advanced his more valuable dollar.

That money, particularly equity money, will not continue to flow into public utility enterprises on any such bases seems too obvious for controversy. Commissions and courts can control rate base, rate of return and allowable operating expenses, but they cannot control the economic laws that regulate the flow of money into new or old enterprises. If the terms they impose are not satisfactory to the investing public the money will not be forthcoming. It will go into other channels.

There is no experience that indicates, and there is not the slightest ground for the belief, that private investors will continue to supply the equity money for public utilities whose rates are regulated on the theory here applied by the Commission. The imposition of any such method of rate regulation as here advocated in the end means either government financing or government ownership of public utilities.

### D. THE COMMISSION ARBITRARILY DEDUCTED IN ITS RATE BASE MORE FOR ACCRUED DEPLETION AND DEPRECIATION THAN EXISTED IN FACT.

*(Com. Brief, 89-99; Cleve. Brief, 46-52)*

As we have seen, the prudent investment method of rate making as employed in Massachusetts and California does not call for deduction of accrued or existing depreciation in determining the rate base. Such a deduction is of course a necessary step in determining the present value of utility property (R. IV, 189) which the Commission never undertook to do. Nevertheless it did make a large deduction for accrued depreciation (Opinion, R. I, 36).

Both the petitioners state the fundamental question on this point to be whether the Commission's "method" of determining actual existing depreciation is reasonable

(Com. Brief, 4, 89; Cleve. Brief, 8, 20, 47). The true issue obviously is the reasonableness of the Commission's *results*, as the Circuit Court of Appeals held (R. IV, 189-193). Anything deducted by the Commission in arriving at its rate base in excess of the depletion and depreciation existing in fact in Hope's properties plainly confiscates them.

There was no disagreement between the parties as to the underlying principles of depreciation that should be applied: that true depreciation is the extent to which the service or economic life of the property has been consumed, and that accrued and annual depreciation must be harmonized. The petitioners' general discussion of these principles is purely of academic interest, since all parties agreed upon them and Hope applied them.[30]

---

[30] This was clearly developed at the hearings:

"The Witness: [Rhodes] Well, in general, the methods followed by the Commission and the methods followed by me differ only as to the order of procedure. The Commission first found depreciation rates—

By Mr. Cockley:

"Q. (Interposing) You mean the Commission's Staff?

"A. Yes, the Commission's staff first found rates of depreciation, and then from these rates of depreciation they computed accrued depreciation of the property.

"In my work I determined directly the accrued depreciation in the property, and I computed the rates of depreciation required by the Company to meet its losses.

"Both methods, when correctly applied, use accepted accounting procedure.

"Q. Now will you tell us why you chose the method you did, rather than the method that the Commission used or the Commission's staff used?

"A. There were a number of reasons for my choice, the principal one of which was that since I was primarily interested in determining accrued depreciation in the property, I determined it directly from measured and observed facts.

"The Commission's method is based upon determining service life, largely a matter of judgment not supported by facts in the Company's experience. There is no mortality experience that means much in property such as Hope's natural gas property.

(*Continued on next page*)

This Court has already called attention to the inherent difficulties of determining actual accrued depreciation by the Commission's roundabout method of estimating service lives and then using them to compute a depreciation reserve. In *Lindheimer v. Illinois Bell Telephone Company*, 292 U. S. 151, 168, it said:

> "If the predictions of service life were entirely accurate and retirements were made when and as these predictions were precisely fulfilled, the depreciation reserve would represent the consumption of capital, on a cost basis, according to the method which spreads that loss over the respective service periods."

It then went on to say that the burden of showing the correctness of the depreciation allowances arrived at by the Telephone Company on that method—

> "'• • • is not sustained by proof that its general accounting system has been correct. The calculations are mathematical but the predictions underlying them are essentially matters of opinion. They proceed from studies of the 'behavior of large groups' of items. These studies are beset with a host of perplexing problems. Their determination involves the examination of many variable elements, and opportunities for excessive allowances, even under a correct system of accounting, are always present. The necessity of check-

---

(*Continued from preceding page*)

"Furthermore, in starting from a judgment figure, the computing of the accrued depreciation in the property magnifies any errors in accounting procedure or any difference between the accounting procedure followed by the Company and that which somebody now thinks it should have followed.

"When accrued depreciation in the property is directly determined from the property itself, the property and the condition of the property is the test of the method; *but when the depreciation in the property is calculated by the roundabout method of judging as to the service life and going through 40 years of accounting records, the only test of the correctness of the Commission's result is whether or not it compares with the facts which can be found by examining the property.*

"I ascertained those facts first, by my method, and that is the reason I chose it." (Tr. 5239-5241).

ing the results is not questioned. The predictions must meet the controlling test of experience.

"In this instance, the evidence of expert computations of the amounts required for annual allowances does not stand alone. In striking contrast is the proof of the actual condition of the plant as maintained— * * *." (292 U. S., 169-170.)

This Court then concluded that the annual depreciation charges determined by that straight line method and the resulting depreciation reserve were erroneous, when so tested by comparison with the actual condition of the plant—"in the face of the disparity between the actual extent of depreciation, as ascertained according to the comprehensive standards used by the Company's witnesses, and the amount of depreciation reserve" (292 U. S., 174-175).

This necessary check upon the *results* reached by the Commission's Staff was never made. The various Staff members worked separately on the various separate parts of the formula set up for them to follow (*supra*, pp. 26 to 27). No Staff witness reviewed the results and testified that they in fact reflected accurately the accrued depreciation and depletion now existing in Hope's property. This is astonishing but true. A check of results would of course have disclosed the errors in service lives and of application of the method (*supra*, pp. 26 and 27) which produced the arbitrary results next referred to. All any of the Commission witnesses ever claimed is that the general *method* they used was a good one, and this is all the briefs of the petitioners say here.

Had the Commission checked the *results* of its Staff's work, as the court below did, instead of being concerned only with general principles and general methods (Opinion, R. I, 36-46), it would have discovered the following among other grossly arbitrary and unreasonable results:

(1) Hope's well equipment, having an adjusted book cost of $7,610,510 at the end of 1938, the Staff depreciated

to a net book cost of $3,227,807 (Ex. 61, R. III, 189, 191). Only 42.4% of the book cost thus went in the rate base. This is less than the salvage value of that equipment, which over the past ten years has amounted to 65.2% of the book cost (Ex. 21, 4-5). *In other words, the Staff wrote down the book cost of Hope's well equipment to less than two-thirds of its salvage value as established over a long period of years.* So gross was this error that the Commission in its Opinion corrected it in part by recognizing that the depreciation rates used in its calculations were excessive and, consequently, reducing its "Accrued Depreciation" by $566,771 (Opinion, R. I, 44). However, even after this partial correction the Commission's "rate base" for Hope's well equipment is only three-fourths of the book cost of the salvage which Hope has been obtaining from its wells.[31]

This "rate base" is of course an even smaller fraction of the salvage of well equipment in terms of present prices.

(2) In the case of field line equipment having a book cost of $7,934,169 at the end of 1938, the Commission's "accrued depreciation" deducted from its adjusted book cost leaves a net book cost or "rate base" of only $4,088,602, or 51.5% of the book cost (Ex. 61, R. III, 189, 191). Hope's actual experience in gross salvage of field line equipment has been 56.7% over the past ten years (Ex. 24, 26). *Thus, the Commission has written down all of Hope's field line pipe to less than the gross salvage value of this pipe on a book cost basis as established by Hope's actual experience.*

---

[31] Actually after deduction of the Commission's hypothetical reserve for future well abandoning costs, *infra*, pp. 86-87, the Commission allowed in Hope's rate base only $1,687,300 or 22.2% of its adjusted book cost of Hope's well equipment for 3300 wells. This amount compares with Hope's $6,133,000 or 56% net present value after deducting well abandoning costs (Ex. 124, R. III, 204), with which Cleveland's brief (pp. 50-51) says comparison should properly be made.

On the basis of current pipe prices, rather than the prices Hope paid years ago, the Commission's "rate base" for field line pipe would, of course, be very substantially less than the present salvage value of this pipe.

(3) In the case of compressor station equipment having a book cost of $7,683,672 at the end of 1938, the Commission has deducted "accrued depreciation" so as to leave a net book cost or "rate base" of $4,579,853, or only 59.6% of the book cost (Ex. 61, R. III, 192, 194). Hope's actual experience in gross salvage on compressor station equipment has averaged 56.4% over the past ten years (Ex. 24, 29). *Thus, the Commission has used as a rate base for Hope's compressor station equipment only a few dollars more than the gross book salvage value of this equipment.*

On the basis of the higher current prices for compressor station material it is obvious that the Commission has used no more than salvage value for this equipment.

(4) On properties purchased by Hope from prior utilities the Staff and the Commission assumed, without any investigation, that whatever depreciation reserves the prior utilities had set up on their books accurately represented the accrued depreciation on those properties as of the date of their purchase by Hope. By using these reserves as set up by predecessor utilities *instead of reserves accumulated at the Staff's own annual depreciation rates applied to these purchased properties*, the Staff, and the Commission in its Opinion, overstated its "Reserve Requirement" or "Actual Existing Depreciation," and understated its "rate base," by $743,927 (Ex. 137, 3, Tr. 2917, 6502).

(5) On communication equipment, i.e., telephone lines and equipment, having an adjusted book cost as of the end of 1938 of approximately $250,000 the Staff, and the Commission in its Opinion, deducted an "Adjusted Depreciation Reserve" of $185,000. It was admitted by Commission witness Dunn that this reserve was sufficient to take care of all the past retirements of communication equipment

property that had ever occurred over Hope's entire history from 1898 on (Tr. 3781-3782), and that if he had been able to get all of the actual retirements in the past he would have deducted them from his computed reserve, but these figures not being available he did not do so (Tr. 3782-3783). In other words his "accrued depreciation" includes the depreciation not only in the existing property but in all of the property of this sort Hope has ever had, including that retired from service during the past 40 years.

(6) The Commission deducted from the book cost of Hope's properties as a part of its "Adjusted Depletion Reserves" the sum of $2,107,261 for what is labeled "Cost of Abandoning Gas Wells" (Ex. 61, R. III, 188). This cost is one that is incurred by Hope for cementing in and plugging wells in accordance with West Virginia laws at the time they are abandoned. The cost of this is an operating expense when abandonment occurs and has nothing whatever to do with depreciation or depletion of book costs or any other costs as the Staff admitted (Dunn, R. II, 512-513).

The $2,107,261 represents a hypothetical reserve which the Commission claimed Hope should have set up in the past for the future cost of abandoning *all* of its present 3300 gas wells. It was not limited to the 772 wells whose drilling cost was included in the Commission's adjusted book cost. The Commission has thus in this instance reversed Hope's former accounting practice and set up a capital account in place of an operating expense.

From the very beginning of operations Hope, in accordance with accounting practice that was admittedly good then and still is (Dunn, R. II, 512), charged the cost of abandoning gas wells to operating expenses when wells were actually abandoned (R. II, 511-512). In fact it was required so to do by the 1923 West Virginia code of accounts (R. II, 511-512) and until West Virginia's present code became effective in 1939.

Nevertheless, because the Commission's new Uniform System of Accounts now requires that a reserve be set up each year for future well abandoning costs, the Staff assumed that Hope should have set one up for this purpose in the past (R. II, 515, 518). In this case Hope's past accounting practices as to all well abandonments are not to be "frozen," although as to well drilling costs they are (*supra*, p. 41). Here again is an inconsistency by the Commission in applying its accounting theories which is arbitrary and unreasonable.

Of course in determining the present value of property the economic encumbrance of future abandoning costs must be recognized and the Circuit Court of Appeals, we believe, properly so held (R. IV, 192-193). In determining the present value of Hope's approximately 3300 wells Hope did deduct future abandoning costs from the present depreciated value of the equipment in these 3300 wells. But the Commission's rate-fixing method is not concerned with property now in existence or with present day values—hence it should not have been concerned with this encumbrance on present value.

It will be observed that the Commission's brief does not attempt to defend the results reached by the Commission. Instead, it is stated in a footnote (p. 94) that the Circuit Court of Appeals overlooked the inspection of Hope's properties made by Commission engineer French as an aid in arriving at his estimated service lives. This inspection was called to the court's attention in the Commission's brief before that court (p. 58), but the court knew from the record that neither Mr. French nor any other Commission witness ever testified that the Staff's results in fact reflected the actual depreciation in Hope's property as checked by this inspection or any others.

There is also a footnote criticism (Com. Brief, 95) of the Circuit Court of Appeals' use of the term "salvage value." The fact is that the court used this term precise-

ly in accordance with the Commission's own Uniform System of Accounts which defines it as follows (Ex. 58, R. III, 44):

> "34. 'Salvage value' means the amount received for property retired, less any expenses incurred in connection with the sale or in preparing the property for sale; *or, if retained, the amount at which the material recoverable is chargeable to Account 131, Materials and Supplies, or other appropriate account.*"

Thus the Commission specifically directs that recoverable material *retained* by a gas company in connection with "property which has been *removed*" be treated as salvage—which, of course, it is.

The point involved is not, however, one of definition but of practical conception of what result the Commission reached. The Commission wrote down *all* of Hope's existing well equipment for 3300 wells, and its 3000 miles of field line pipe to substantially less than the book cost of that *part* of all this well equipment and line pipe which Hope's actual experience shows will be in perfectly suitable condition for re-use, either by Hope or other people, many years in the future when the existing wells are abandoned and the existing field lines taken up (Ex. 21, 4). On compressor station equipment it did not go quite this far, but very nearly.

The Commission's brief also argues by footnote (p. 94) that "The depreciation rates are not applied to the original cost of the property, but rather against its 'service value'," namely original cost less salvage value. Hence it is a "mathematical impossibility" to arrive at a net book cost less than "salvage value." The writer of this footnote was not familiar with the record, because the Commission's Staff did apply its depreciation rates directly to the "Adjusted Book Cost," computing them "on the average investment for the year" and did not apply them to the "service value" of Hope's properties (Dunn, Ex. 61, R. III, 181; French, R. III, 172-173).

Both the Commission and Cleveland argue that this Court's decision in *Federal Power Commission v. Natural Gas Pipeline Co.*, 315 U. S. 575, somehow supports what the Commission did on accrued depreciation in this case (Com. Brief, 96; Cleve. Brief, 48-49). In that case depletion and depreciation of properties in a continuing business such as Hope's were not involved at all, but rather amortization on a sinking fund basis for "a business which can exist for only a limited time"—23 years in all from the beginning to the end of the business (315 U. S., 593, 594). The very question involved here—how much of the total service life of Hope's existing properties has *in fact* expired—was agreed to by the parties for the properties involved in the *Natural Gas Pipeline* case. There the beginning was admittedly 1932, the end admittedly 1954, and the present date an obvious fact (315 U. S., 578, 580, 593).

Concluding, we repeat. Neither in this Court, in the Circuit Court of Appeals, nor before the Commission has anyone claimed that the *results* reached by the Commission's Staff and the Commission *in fact* represents the accrued depreciation and depletion existing in Hope's properties. We also note that although the Commission's Staff worked a year after Hope's accrued depreciation study was presented and had available all of Hope's underlying data before presenting its own depreciation and depletion calculations (Tr. 879; R. II, 44; Tr. 3245), not one single Staff witness, engineer or accountant, either by written exhibit or orally, on either direct or cross examination, ever undertook to state that the results reached by Hope's witnesses did not in fact reflect fully the accrued depreciation and depletion actually existing in Hope's property. The plain truth is that Hope was subjected to the blind application of a depreciation formula, inherently requiring a check of results, whose actual results the Staff never checked and the Commission did not choose to check.

The Circuit Court of Appeals was clearly right in condemning the results in this case as arbitrary (R. IV, 189-193).

**E. SUMMARY AND CONCLUSIONS AS TO RATE BASE.**

As we have seen, the Commission's rate base in this case:

(1) Does not reflect any change in price levels since 1898 and understates by many millions of dollars the present value of Hope's property judged by any reasonable standard (*supra*, pp. 53-54);

(2) Does not include a substantial portion of Hope's properties now actually in service (*supra*, pp. 30-35);

(3) Does not set forth a rate base such as would be determined in California where the prudent investment theory has been practically applied (*supra*, pp. 67-73);

(4) Eliminates a large portion of the other properties by finding that the depreciation therein is substantially in excess of what it is in fact (*supra*, pp. 80-89); and

(5) Applies inconsistent accounting principles to its determinations of rate base and operating statements with the result of understating the rate base and so the cost of gas service (*supra*, pp. 42-46, 86-87).

This Commission rate base which neither represents the property in service nor the cost of this property, nor its present value, is one the like of which has never heretofore appeared in any decision. Probably the nearest approach to it is the District Court's rate base in *West v. The Chesapeake & Potomac Telephone*, *supra*, where it took merely book cost and deducted the book depreciation reserve, a rate base which this Court tersely condemned as arbitrary. 295 U. S., 678-679.

Actually the Commission's method results in a mere bookkeeping rate base. It ignores present property for past bookkeeping. It converts present physical property and property rights of the utility into mere claims to book-

keeping entries which the Commission's accountants and the Commission, in their own judgment, may decide are not "accounting errors" of the past. If generally applied this bookkeeping theory of rate making would produce grossly inconsistent, inequitable and arbitrary results, just as it has in this case.

For example, Company A's books have been kept for the last 40 years on the principle of capitalizing every item that could possibly be capitalized under accounting rules. Its depreciation reserves have been kept down to a minimum. This has enabled it to pay out large dividends on the largest amount of capital stock that could be issued. Company B on the other hand, the Hope Company, has followed a directly opposite principle. It declared no dividends for the first 10 years (Ex. 81, R. III, 13) of its history and plowed earnings back into the property. It has set up large depreciation reserves when its earnings were good, instead of paying dividends, not only to preserve, but to develop its property. Its outstanding capital securities are less than half of its value as assessed for taxation by West Virginia. But on the Commission's theory because of its conservatism and the careful management of its financial affairs in the past Hope is now to have a rate base substantially less than Company A. Sound, conservative and thrifty business practices are to be punished.

Again, let us assume that the Hope properties belong to two separate companies, that Company X owns the one-half of its properties constructed prior to 1917 and Company Y owns the half of its properties constructed since that time. Company X would have an original cost of $25 million, Company Y an original cost of $45 million (*supra*, p. 22). Moreover Company X, being older, would have a higher per cent "depreciation reserve requirement" than Company Y. The result would be that on the Commission's theory Company X would have a rate base of less than half as much as Company Y and its rates would be substantially lower. It is certainly an arbitrary result if

two companies with like properties performing a like service with a like commodity in the same locality have widely different rates. They would have, however, if their rates were fixed by this Commission on its present bookkeeping theory.

In addition the application of this bookkeeping theory rests upon someone's notion as to what was proper accounting in the past and what is proper accounting now. As to this no two accountants have ever agreed—or will. Yet, as illustrated in this case, millions of dollars can be deducted from the rate base because the Commission's present chief accountant believes that well drilling costs are capital expenditures, rightly considered, but also believes it was not an "accounting error" to expense them in the past. Present property rights cannot, except arbitrarily, be allowed to rest on shifting notions of what is proper bookkeeping.

Moreover, this bookkeeping theory necessarily regulates retroactively. Here it has had the effect of determining that nothing is allowed in the rate base for many properties actually existing and in service—and costing and having a present value of many millions of dollars because in the years back to 1898 and long before the Natural Gas Act was even thought of Hope did not capitalize these properties on its books. Hope is thus now penalized millions of dollars because it kept its books in a particular way in the past. Had it kept its books less conservatively—on modern accounting notions—or if it had kept no books at all, it would not be subjected to this enormous penalty. The Natural Gas Act was certainly never intended by Congress to permit the Commission to impose enormous penalties by way of rate base deductions on natural-gas companies because they kept their books one way or another in the past—and to penalize particularly those companies which in the past kept their books most conservatively.

All of this arbitrary action by the Commission has followed in this case from its substitution of its own arbitrary

and untried bookkeeping rate base and rate making theories for the plain requirements of the Natural Gas Act and the Constitution that natural-gas companies must at least be permitted a fair return upon the present fair value of their properties.

## II. OPERATING EXPENSES.

*(Com. Brief, 99-110; Cleve. Brief, 52-55)*

To a very large extent there was no disagreement as to Hope's actual and necessary operating expenses.[32] However, the Staff did, as it phrased it, "disallow" certain items or parts thereof. The Commission in its Opinion did not consider the 1937 and 1938 operating expenses included in the record but did find what it claimed were Hope's necessary operating expenses in 1939 and 1940 and projected future operating expenses on the basis of 1940 alone. In these findings it followed the Staff's "disallowances" and understated or eliminated Hope's operating expenses in substantial sums.

The evidence and the Commission's action on disputed items were as follows:

### A. ANNUAL ALLOWANCE FOR DEPRECIATION AND DEPLETION.

*(Com. Brief, 99-108; Cleve. Brief, 52-54)*

#### 1. Property In Existence In 1940.

Hope's determination of necessary annual depreciation was based on annual rates developed on the basis of a careful study of the entire depreciation experience of Hope from 1898 to date (Ex. 24, R. I, 465-477). Hope's method

---

[32] Hope's annual operating expenses for each of the years 1937 through 1940 were set forth as claimed by Hope in Exhibits 37, 126 (R. I, 479) and 130 and as claimed by the Commission's Staff in Exhibits 67 (R. III, 224), 67A (R. III, 258), 78 (R. III, 287) and 90 (R. I, 493 and R. III, 349) and in Commission counsel's briefs before the Commission.

served to correlate completely accrued and annual depreciation. As stated by Mr. Rhodes (R. I, 475):

> "These annual rates of depreciation as heretofore stated are determined from the Company's actual depreciation experience over the entire history of its properties and correlate annual depreciation with the accrued depreciation deducted in the Company's exhibits from reproduction cost new. * * *"

We call attention to this testimony because of the wholly erroneous and unfounded statement in the Commission's Opinion (R. I, 37) that Hope presented inconsistent claims on accrued and annual depreciation.

The Commission's Staff used the annual depreciation rates estimated by Commission engineer French (Ex. 65, R. III, 151). On the important property accounts these estimated annual rates were in fact larger than those determined from Hope's study because of the short service lives erroneously estimated for these properties (*supra*, pp. 26-27). The basic reason for the Commission's inadequate annual depreciation expense is, therefore, not in the annual depreciation rates used by the Commission but in the base to which they are applied.

Hope applied its rates to the present value of *all* of its properties (Ex. 24, R. I, 467), whereas the Commission applied its rates to its "Adjusted Book Cost" (Ex. 61, R. III, 175, 181). Since this adjusted book cost excluded the original cost of $17,000,000 of property owned by Hope and presently in service (*supra*, pp. 20, 33), the Commission allowed $0 for the actual depreciation and depletion occurring in these properties each year. Hope is thus compelled to sell off this property each year for nothing. Such action is arbitrary and obviously confiscatory.

In applying its depreciation and depletion rates to the book cost of the other property rather than to its present value the Commission of course defied the decision of this Court in *United Railways and Electric Company of Baltimore v. West*, 280 U. S. 234, where it said at pages 253-254:

"The allowance for annual depreciation made by the commission was based upon cost. The court of appeals held that this was erroneous and that it should have been based upon present value. The court's view of the matter was plainly right. One of the items of expense to be ascertained and deducted is *the amount necessary to restore property worn out or impaired, so as continuously to maintain it as nearly as practicable at the same level of efficiency for the public service.* The amount set aside periodically for this purpose is the so-called depreciation allowance. *Manifestly, this allowance cannot be limited by the original cost, because, if values have advanced, the allowance is not sufficient to maintain the level of efficiency.* The utility 'is entitled to see that from earnings the value of the property invested is kept unimpaired, so that at the end of any given term of years the original investment remains as it was at the beginning.' *Knoxville v. Knoxville Water Co.*, 212 U. S. 1, 13-14. This naturally calls for expenditures equal to the cost of the worn out equipment at the time of replacement; and this, for all practical purposes, means present value."

The Commission and Cleveland urged upon the Circuit Court of Appeals that the decision in *Lindheimer v. Illinois Bell Telephone Company*, 292 U. S. 151, justified the Commission's action and the Commission argues here (Com. Brief, 103-104) that it "modifies the contrary holding in the earlier *West* case, 280 U. S. 234." What this Court actually held in the *Lindheimer* case we have already pointed out, *supra*, pages 82 to 83. We add only that what Mr. Justice Butler said in his concurring opinion in that case (292 U. S. 151, 176) was that the Telephone Company's practice of calculating depreciation charges on the straight line method applied to cost less salvage was not in harmony with the *West* case. The Circuit Court of Appeals obviously analyzed the *Lindheimer* decision correctly (R. IV, 195).

It might be noted that the *Lindheimer* case presents the converse of the present case. There depreciation

charges calculated on book costs produced current annual allowances far larger than necessary to reflect the current consumption of property at present values. This Court accordingly condemned them for rate fixing purposes. Here depreciation charges calculated on partial book costs reflecting low price levels of long ago produce current annual allowances far less than necessary to reflect the current consumption of property at present values. The Circuit Court of Appeals properly condemned them for rate fixing purposes.

It was also urged upon the Circuit Court of Appeals, as again here (Com. Brief, 101-103; Cleve. Brief, 52-53), that the Commission's action in calculating depreciation allowances on partial past costs was justified by the decision in the *Natural Gas Pipeline* case, 315 U. S. 575.

In that case the utility was not satisfied with an ordinary depreciation allowance based on the complete consumption of the property in public service. It claimed instead a larger allowance by way of an amortization charge to replace the property in 23 years. The larger allowance by way of amortization was given to it but was limited to the utility's investment. That the decision is confined to a property of limited life is clearly apparent from the opinion (315 U. S., 593).

In the present case no amortization allowance was claimed by Hope or allowed by the Commission, but only the usual depreciation and depletion allowance. Both Hope's engineers and the Commission's Staff treated Hope as the continuing property it is. In such a continuing property the function of a depreciation allowance is, in the language of this Court in the *West* case, to provide the utility with funds "necessary to restore property worn out or impaired so as continuously to maintain it as nearly as practicable at the same level of efficiency for the public service." Since the great and permanent increase in price levels following World War I, Hope can no longer replace at the cost of its

original construction property worn out in service and retired. On the average its replacement cost will now be at least 50% above its original cost. Unless Hope's earnings are sufficient to enable it to make these replacements at present prices the only alternative is to issue and sell, if it can, capital securities to raise money for that purpose. It must either do this or gradually let its properties disintegrate.

All this was stated more succinctly by Judge Parker (R. IV, 194-196).

Against this sound and common sense view of the court below the Commission's brief argues (pp. 102-103) that Hope and the company involved in the *Natural Gas Pipeline* case are really just alike, and the limited principle applied in that case should also be applied to Hope, because (1) Hope will be forced out of business it if does not extend its pipe lines as contemplated and (2) the *Natural Gas Pipeline* Company may continue in business after 1954 if it obtains more gas. With over 700,000 domestic consumers dependent upon Hope (*supra*, p. 5), Hope must and will continue in business so long as there is natural gas in the Appalachian area or elsewhere within transportation range in the United States. Whatever actually happens to the *Natural Gas Pipeline* Company, the Commission's rate determinations and this Court's ruling were made on the basis that "the business, by hypothesis, will end in 1954."

Next the petitioners argue that constitutional requirements are met because the Commission's annual allowances will "reimburse Hope to the amount" of its "existing investment," that Hope is "therefore made whole and the integrity of its investment maintained," and that it "ceases to have a right to a return upon the portion of the investment which has been consumed, and which is recouped from the rate payers through revenues covering annual depreciation allowances" (Com. Brief, 105-106). Here in one paragraph is the whole erroneous theory.

Hope's true "existing investment" is its existing properties. It owns nothing else. It is these properties that the Constitution protects. It is these existing properties that wear out in service and must be replaced. If Hope is not allowed sufficient money in operating expenses to replace these existing properties as they wear out at whatever the actual current cost of replacement is, "the integrity of its investment" is not, as a matter of fact, maintained, nor is Hope "made whole."

What the writer of the Commission's brief means by "existing investment" is not existing property but what it cost—or rather that part of the cost which the Commission has recognized—when installed. Cost, however, the Constitution does not protect. "The public have not underwritten the investment" (Mr. Chief Justice Hughes in *Los Angeles Gas & Electric Corp. v. Railroad Commission of California*, 289 U. S. 287, 306). Cost, moreover, is not a stable thing. It only appears so because it is expressed in dollars and the symbol for $1 in 1898 or 1940 is the same. The pre-World War I dollars which were spent in building half of Hope's existing property were worth twice as much as the post-World War I dollars which were spent to build the remaining half. Thus when in 1942 Hope receives $1 by way of a depreciation allowance to replace pre-World War I property which then cost $1 to construct, it is as a matter of cold, hard sense getting only ½ of its "existing investment" in that pre-World War I property.

Finally the petitioners argue that to compute depreciation charges on cost is the accepted business and accounting practice (Com. Brief, 106-108). That is so as a matter of practical convenience. Hope did so as a matter of convenience even before its accounting was regulated. But business men are free to adjust their depreciation rates so that their annual depreciation allowances will not understate the actual consumption of their properties measured in terms of the existing, not the past, value of the dollar, just as Hope did.

The fundamental business reality, which business men do and the courts have always recognized is that the dollar has a shifting value with a long run tendency to depreciate. Unless this is recognized in determining the annual depreciation expense for rate making purposes property is consumed in service without compensation. This is confiscation.

**2. Property Added In 1941 and 1942.**

The Commission failed to allow Hope annual depletion and depreciation on the property added after 1940 and in service by July 15, 1942 when its rate order became effective. The Commission estimated this added property at $1,392,021 although Hope claimed it was considerably more (R. IV, 193). The court below was obviously correct in condemning this arbitrary action by the Commission (R. IV, 196).

The Commission's brief by footnote 53 (p. 108) argues that the Commission was not required to make any allowance for *future* capital additions under the *Natural Gas Pipeline* case, and it therefore conferred a "benefit" on Hope, and that Hope "can hardly demand the additional boon of a depreciation allowance on this gratuity." Of course the Commission's allowance was no gratuity. The Commission included in its rate base only one-half of its estimated net increase in Hope's properties for the period 1941 through 1943 thus arriving at the additional property in service when its rate order became effective in the middle of 1942 (Opinion, R. I, 47; R. IV, 193). In the *Natural Gas Pipeline* case the Commission allowed capital additions to the end of 1942 although its rate order was to go into effect in 1940 (315 U. S., 587, 580).

**B. ALLOWANCE FOR RETURN ON HOPE'S WEST VIRGINIA DISTRIBUTION PROPERTIES.**

In allocating costs for the purpose of testing and fixing Hope's interstate rates the Commission allowed Hope a 6½% return on a rate base for its West Virginia distribu-

tion properties which it determined as follows: It took Hope's $3,109,994 book cost of these properties and deducted Hope's $1,393,107 book depreciation reserve therefrom to arrive at a rate base of $1,716,887, to which was added working capital of $150,000 (Ex. 90, R. III, 358).

Thus the Commission used as a rate base for all of Hope's West Virginia distribution properties exactly the rate base used by the District Court in *West v. The Chesapeake & Potomac Telephone Co.*, 295 U. S. 662, 668, 678, and as to which this Court said "This rough and ready approximation of value is as arbitrary as that of the Commission, for it is unsupported by findings based upon the evidence." (295 U. S., 679).

Here the record showed that a considerable portion of these properties was built at the low price levels prevailing before the end of World War I (Antonelli, Tr. 5060-5061). Also the Commission itself demonstrated that Hope's book depreciation reserves did not measure the actual depreciation on any basis. Finally, evidence was submitted that the distribution properties valued by the Commission at $1,716,887 were valued by West Virginia in 1941 for property tax purposes at approximately $2,859,000 (Chisler, Tr. 5433), but the Commission refused to receive this evidence (Tr. 5416).

The Circuit Court of Appeals was clearly correct in condemning this action of the Commission (R. IV, 197-198) and the petitioners do not undertake to support it here.

**C. THE COMMISSION'S EXCLUSION FROM 1940 OPERATING EXPENSES OF $165,963 FOR AN EXPERIMENTAL DEEP-TEST WELL.**

*(Com. Brief, 109-110; Cleve. Brief, 54-55)*

It is claimed (Com. Brief, 108-109) that Hope was not harmed by the Commission's exclusion of Hope's actual 1940 expenditures (not booked until 1941) in drilling a deep-test well which proved dry and which exclusion the Circuit Court of Appeals disapproved (R. IV, 198). Obvi-

ously Hope was directly harmed to the extent of $165,963 in the Commission's retroactive findings as to what rates it should have charged in 1940 which were based on its actual operations as the Commission found them for that year alone. The retroactive rate fixing of the Commission was overlooked by the writer of the Commission's brief at this point.

Actually Appendix B, Table 1, to the Commission's brief shows the exact extent to which Hope has been harmed by this Commission action. It shows Hope's "Exploration and dev. costs" per books for 1940, 1941 and 1942, which compares with the Commission's allowances as follows (Opinion, R. I, 65):

| Year | Exploration and Development Costs | |
|---|---|---|
| | Per Books | Allowed by the Commission |
| 1940 | $ 427,233 | $ 407,920 |
| 1941 | 761,568 | 600,000 |
| 1942 | 552,704 | 600,000 |
| Total | $1,741,505 | $1,607,920 |

Thus Hope would actually be deprived of over $133,000 of its actual exploration and development costs if all of the Commission's orders and findings were allowed to stand.

## D. RETURN FROM GASOLINE AND BUTANE OPERATIONS OF AFFILIATE.

Although the Circuit Court of Appeals held that the action of the Commission in crediting almost all of the affiliated Hope Construction and Refining Company's earnings to Hope was not "so arbitrary and unreasonable as to be invalid" (R. IV, 196), we think it important to point out, as the evidence showed (Rhodes, Ex. 101), that on the rate base calculations used by the Commission for the property of this affiliate all of its gasoline plants existing at December 31, 1938 will be fully depreciated by 1944. At the end of 1938 their book cost was $1,459,000 and the Commission deducted a calculated depreciation reserve to write

them down at that time to $428,000 (Ex. 63, R. III, 389). It claimed they were depreciating at the rate of $70,000 annually (*ibid*). Thus by 1944 they would appear in the Commission's rate base at $0. The complete artificiality of this bookkeeping theory and this result is demonstrated by the photographs of these gasoline plants taken in June, 1941 which appear in Exhibit 113. These photographs were not reproduced in the printed record by reason of the difficulty of reproduction, but they are well worth examining as visual evidence of the departure of the Commission's rate base theories from fact.

## E. FEDERAL INCOME TAX.

In view of its reversal of the Commission's orders the Circuit Court of Appeals found it unnecessary to determine exactly what federal income tax the Commission should have allowed Hope in determining its operating expenses for the various years past and for the future (R. IV, 197). Nevertheless it is apparent that its judgment setting aside the Commission's orders (R. IV, 207) cannot be reversed unless the arbitrary action of the Commission on Hope's federal income taxes meets the approval of this Court.

(1) *Taxes allowed in retroactive findings.* The Commission found Hope's actual federal income taxes in 1939 were $191,521 and in 1940 $912,313 (Opinion, R. I, 61). In the Commission's Opinion it is reported that these actual taxes are "allowed" (R. I, 61) and in its "Findings as to Lawfulness of Past Rates" it is stated in Finding (17) that "the actual operations for 1939 and 1940 are the reasonable and proper bases for determining lawful rates in those years * * *" (R. I, 11). The fact is, however, that in retroactively fixing Hope's rates for 1939 and 1940 the Commission allowed Hope only $39,716 of federal income taxes in 1939 and none whatsoever in 1940 (R. I, 61, 12; R. IV, 41) although it fails to say so.

For 1941 and following years the Commission allowed Hope only $76,579 for federal income taxes although Hope in 1940 had, as we have seen, actually paid $912,313 (Opinion, R. I, 65).

The Commission's Opinion is wholly silent as to any justification for this action. It apparently proceeded on the wholly artificial concept that if Hope's rates had been as low as the Commission now says they should have been for the years 1939 to 1942, Hope would have had no income tax in 1940 and substantially none in 1939, 1941 and 1942. Of course under the rates actually collected by Hope in these years, elsewhere in the Commission's brief (pp. 116-117) admitted to be the legal rates during these years, Hope owed and paid very substantial income taxes. The Commission apparently assumed that Hope should have avoided the $912,313 federal income tax payment for 1940, for example, by changing its rates at the *beginning* of 1940 to the greatly reduced rates the Commission now proposes for 1940 on the basis of the operating results for the full year 1940, although neither Hope nor the Commission itself could possibly have known until well after the *end* of 1940 what those rates should be on any rate making theory (see page 139, *infra*).

The effect of this action by the Commission is disclosed in Appendix B, Table 1, of the Commission's brief. Shown there are Hope's federal income taxes as accrued in these years on the basis of its revenues under its filed rate schedules. These rate schedules were the same until July 15, 1942 after which they reflected the Commission's reduced interstate rates. The actual taxes so shown as compared with what the Commission allowed in fixing Hope's rates retroactively are as follows (R. I, 61, 12, 65):

| Year | Federal Income Taxes | |
|---|---|---|
| | Actual | Allowed by the Commission |
| 1939 | $ 191,521* | $ 39,716 |
| 1940 | 912,313* | 0 |
| 1941 | 1,750,000 | 76,579 |
| 1942 | 2,020,000 | 76,579 |
| Total | $4,873,834 | $192,874 |

*Appendix B, Table 1, shows $225,000 and $1,000,000 for 1939 and 1940 which we have adjusted in accordance with the Commission's adjustments (Opinion, R. I, 60, 61). The 1941 and 1942 accruals may be subject to similar adjustments to reflect final actual payments.

It will be observed that the difference between Hope's actual federal income taxes in these years and the amount the Commission allowed for the purpose of its retroactive rate fixing order is over $4,500,000. Thus Hope has already paid to the federal government over $4,500,000 of the so-called "excess" revenues which the Commission claimed Hope had received in 1939, 1940 and since 1940 and which it labeled "unjust, unreasonable, excessive, and therefore unlawful" (R. I, 12-13).

(2) *Taxes allowed in fixing future rates.* The Commission took the position that under its reduced rates Hope would in the future have to pay only $76,579 of federal income taxes annually at an estimated 40% future federal income tax rate (Opinion, R. I, 64-65). This it termed a "saving" of $1,443,943 a year in the income tax Hope would pay if its former interstate gas rates were continued (Opinion, R. I, 64). As to this we note:

(a) On even the Commission's theories Hope's interstate rates were the lowest possible rates in pre-preparedness and pre-war years.[33] Because of increased prepared-

[33] In 1937 the Commission's rate would have been 32.7¢ and in 1938, 39.1¢, or an average of about 36¢ (from Commission

(*Continued on next page*)

ness and war demands for gas and consequent excessive consumption of Hope's own gas reserves, *which are given no value,* the Commission seeks to reduce Hope's rates to such an extent that the federal government is deprived of all or substantially all income taxes from the largest business Hope has had since World War I. This "tax-saving" is then passed out in the form of a still lower interstate rate for gas—for the benefit of individual consumers not responsible for the increased sales and better able to pay for their consumption of a limited natural resource than ever before.

(b) The Commission arbitrarily assumed that under its reduced interstate rates Hope would still be entitled under the Internal Revenue Code to its existing depletion deductions. The fact is, as shown in Hope's income tax reports which the Commission's Staff examined, that the amount of depletion for income tax purposes allowed Hope by the Internal Revenue Bureau is dependent upon the ultimate sales price of the gas produced (Internal Revenue Code, Secs. 23(m), 114(b)(3); Reg. 103, Sec. 19.23 (m)-1(f); *Consumers Natural Gas Co. v. Commissioner*, 78 F. (2d) 161 (C. C. A. 2d, 1935) cert. denied 296 U. S. 634; *Greensboro Gas Co. v. Commissioner*, 79 F. (2d) 701 (C. C. A. 3d, 1935), cert. denied 296 U. S. 639). With the Commission's reduction in Hope's interstate rates Hope's depletion allowance for tax purposes would decrease proportionately. This means that the Commission should have found, on its own theories, considering the matter to which we here call attention, that Hope under the Commission's own future rates would have to pay a great deal more federal income taxes than the Commission's allowance of

---

(*Continued from preceding page*)

Staff's Exs. 67, 67A, 90, R. III, 224, 258, 349; Commission Counsel's Brief before the Commission, Appendix E; Commission Counsel's Reply Brief before the Commission, Appendix A; Opinion, R. I, 51-65). Hope's interstate rates actually averaged 36c for those years (Ex. 90, R. III, 353; Ex. 2, 2; Ex. 2B, 3).

$76,579. Worked out in figures, the result would be a decrease in the Commission's so-called "income tax savings" and a decrease in the amount of total rate reduction calculated by the Commission of about $200,000 each year.[34]

## III. RATE OF RETURN.

The Commission fixed a rate of return of 6½%, based entirely upon current factors affecting this matter (Opinion, R. I, 65-67). The Circuit Court of Appeals sustained this finding under this Court's test in *Bluefield Water Works & Improvement Co. v. Public Service Commission*, 262 U. S. 679, 692 (R. IV, 198-199), although it noted that "in view of the low rate of return allowed"[35] there was

---

[34] The Commission's reduced rates reduce Hope's gross revenues by at least $3,600,000. This would reduce its average earnings at the well mouth, after deduction of amounts attributable to transmission, by the same amount. Divided by the 74,000,000 M.c.f. total gas handled (Ex. 2-B, p. 3), this would be a reduction in the computed well mouth value of gas of about 5¢ per M.c.f. The gross income for income tax purposes from the 25,000,000 M.c.f. produced (Ex. 2-B, p. 10) would be reduced $1,250,000. The income tax depletion allowance based on 27½% of the gross income would in turn be reduced about $350,000. This would increase the income tax due at a 40% rate by $140,000. Under the Commission's method of computing its total rate reduction by adding "excess earnings" and "income tax savings," any such increase in Hope's operating expenses results in a decrease in the amount of rate reduction by 140% of such increase. Accordingly the final effect of this depletion adjustment would be a decrease of about $200,000 in the Commission's rate reduction.

[35] That the rate of return in this case is very low was proved not only as a matter of expert opinion (Ex. 19, R. I, 394), but in addition as a matter of fact by a statistical study of the market appraisal of the risks in various groups of utility enterprises made by Mr. Paul B. Coffman, Vice President of Standard & Poors Corporation. He took the aggregate average market prices for the bonds, preferred stocks and common stocks of all utilities of various classes for which the statistics were available and divided this into the annual earnings available for distribution to these securities for the 4-year period 1937 to 1940. His direct testimony is contained in Exhibit 27-A (R. I, 440) and the results of this are set forth in the following table (R. I, 441):

(*Continued on next page*)

a "consequent lack of margin to take care of error in the base" (R. IV, 172).

The test in the *Bluefield* case is that a public utility is "entitled to such rates as will permit it to earn a return *on the value of the property* which it employs for the convenience of the public" equal to certain standards there set forth (262 U. S., 692). This is not a measure of the return on a rate base which does not reflect, and is not designed to reflect, the value of a public utility's property.

The Commission here used a low present rate of return in combination with its original cost rate base. This is clearly inconsistent with the prudent investment method and is unreasonable on any theory.

No one recognized that the prudent investment rate base went hand in hand with a rate of return fixed as of the date of the investment more fully than did Mr. Justice Brandeis. In his classic exposition of the prudent investment theory in *State of Missouri ex rel. Southwestern Bell Telephone Co. v. Public Service Commission of Missouri, supra*, in which Mr. Justice Holmes concurred, he said (262 U. S. 304-306):

---

(*Continued from preceding page*)

**Investors' Appraisal of Capital Risk in Various Divisions of the Utility Business.**

| | 1937 | 1938 | 1939 | 1940 | Four Year Average 1937-1940 |
|---|---|---|---|---|---|
| Electric Utility Operating Companies | 5.47% | 5.50% | 5.41% | 5.43% | 5.45% |
| Water Companies | 5.52 | 5.39 | 5.66 | 5.23 | 5.45 |
| Manufactured and Mixed Gas Company | 6.17 | 6.61 | 6.61 | 6.88 | 6.57 |
| Natural Gas Companies | 7.91 | 7.79 | 7.53 | 7.97 | 7.80 |
| Natural Gas Companies excluding Pacific Lighting Corporation | 8.32 | 8.05 | 8.32 | 9.34 | 8.51 |

It will be observed that the investors appraise the risks of natural gas companies substantially higher than they do the risks of either electric companies or manufactured and mixed gas companies and at a rate substantially higher than the 6½% allowed by the Commission.

"That part of the rule of *Smyth v. Ames* which fixes the rate of return deemed fair, at the percentage customarily paid on similar investments at the time of the rate hearing, also exposes the investor and the public to danger of serious injustice. If the replacement-cost measure of value and the prevailing-rate measure of fairness of return should be applied, a company which raised, in 1920, for additions to plant, $1,000,000 on a 9 per cent. basis, by a stock issue, or by long-term bond issue, may find a decade later, that the value of the plant (disregarding depreciation) is only $600,000, and that the fair return on money then invested in such enterprise is only 6 per cent. Under the test of a compensatory rate, urged in reliance upon *Smyth v. Ames*, a prescribed rate would not be confiscatory, if it appeared that the utility could earn under it $36,000 a year; whereas $90,000 would be required to earn the capital charges. On the other hand, if a plant had been built in times of low costs, at $1,000,000 and the capital had been raised to the extent of $750,000 by an issue at par of 5 per cent. 30-year bonds and to the extent of $250,000 by stock at par, and ten years later the price level was 75 per cent. higher and the interest rates 8 per cent., it would be a fantastic result to hold that a rate was confiscatory, unless it yielded 8 per cent. on the then reproduction cost of $1,750,000. For that would yield an income of $140,000, which would give the bondholders $37,500; and to the holders of the $250,000 stock $102,500, a return of 41 per cent. per annum. Money required to establish in 1920 many necessary plants has cost the utility 10 per cent. on thirty-year bonds. These long-time securities, issued to raise needed capital, will in 1930 and thereafter continue to bear the extra high rates of interest, which it was necessary to offer in 1920 in order to secure the required capital. The prevailing rate for such investments may in 1930 be only 7 per cent.; or indeed 6 per cent.; as it was found to be in 1904, in *Stanislaus County v. San Joaquin & Kings River Canal & Irrigation Co.*, 192 U. S. 201; in 1909, in *Knoxville v. Knoxville Water Co.*, 212 U. S. 1; and in 1912, in *Cedar Rapids Gas Light Co. v. Cedar Rapids*, 223 U. S. 655,

670. A rule which limits the guaranteed rate of return on utility investments to that which may prevail at the time of the rate hearing, may fall far short of the capital charge then resting upon the company.

"In essence, there is no difference between the capital charge and operating expenses, depreciation, and taxes. Each is a part of the current cost of supplying the service; and each should be met from current income. When the capital charges are for interest on the floating debt paid at the current rate, this is readily seen. But it is no less true of a legal obligation to pay interest on long-term bonds, entered into years before the rate hearing and to continue for years thereafter; and it is true also of the economic obligation to pay dividends on stock, preferred or common. The necessary cost, and hence the capital charge, of the money embarked recently in utilities, and of that which may be invested in the near future, may be more, as it may be less, than the prevailing rate of return required to induce capital to enter upon like enterprises at the time of a rate hearing ten years hence. *To fix the return by the rate which happens to prevail at such future day, opens the door to great hardships. Where the financing has been proper, the cost to the utility of the capital, required to construct, equip and operate its plant, should measure the rate of return which the Constitution guarantees opportunity to earn.*

"The adoption of the amount prudently invested as the rate base and the amount of the capital charge as the measure of the rate of return would give definiteness to these two factors involved in rate controversies which are now shifting and treacherous, and which render the proceedings peculiarly burdensome and largely futile. Such measures offer a basis for decision which is certain and stable."

Again he said, page 307:

"In speculative enterprises the capital cost of money is always high; partly because the risks involved must be covered; partly because speculative enterprises appeal only to the relatively small number of investors who are unwilling to accept a low return on their capital."

In a note at the bottom of the same page he further said:

> "Of course, anyone who chances to have money to invest, when money rates are high, gets the advantage incident to investing in a favorable market. If he invests in utility bonds, the higher agreed return upon his capital would be provided for by a rule which measures fair return by capital charges, as suggested above. If he elects to invest in the stock, he would, under the rule suggested, have the opportunity of earning a return commensurate with the value of the capital at the time it was embarked as stock in the enterprise."

Mr. Justice Brandeis, of course, was talking about the cost of the outstanding capital securities of a public utility, having primarily in mind public utilities such as railroads which are largely financed by the sale of securities to the public. Where a corporation has no securities outstanding in the hands of the public, as in the case of Hope, it is not possible to determine from its records the cost of money to it. Mr. Justice Brandeis would be the first to recognize that in such a situation the cost of capital should be estimated precisely the same as he said original cost, where not shown by company records, should be estimated (see *supra*, pp. 36-37). In his opinion above quoted he recognized the obligation to pay interest on long term bonds at the contract rate over long periods of years in spite of a decline in interest rates and said that this was also true "of the economic obligation to pay dividends on stock, preferred or common" (262 U. S., 306).

Writing in 1923, he remembered that "money required to establish in 1920 many necessary plants has cost the utility 10 per cent. on thirty-year bonds." He intended to include that cost for bond money in the rate of return. Undoubtedly he contemplated that if common stock money at that time cost 12% or 15%, that also should be included. In other words he urged the rates of return necessary to

attract capital to the utility at the time it was attracted and invested in the property. He never urged the prudent investment rate base with a current rate of return.

As we have already seen practical application of this method of using a historical cost rate base undepreciated and a historical cost rate of return is made in California, *supra*, pages 68-73. There a higher return is used with the historical cost rate base than would be used by the same Commission on a fair value rate base. For example in the *Los Angeles Gas* case it was 7.7% on historical cost and 7% on fair value.

The Commission here determined a current rate of return to accompany its so-called "original cost" rate base. *It ignored entirely the historical cost of money that Justices Brandeis and Holmes recognized had to be reflected if an original or historical cost rate base were to be used.* Thus the Commission offers to the investor and to the public utility not a continuation of the rate of return they reasonably had a right to expect at the time the utility property was constructed, but whatever rate of return is current at the date on which rates are fixed. This is a departure from the prudent investment theory that robs it of all semblance of reasonableness.

Solely by way of rebuttal, after the Commission's Staff had testified to its rate base theories, Hope introduced testimony as to the rates of return that would have been necessary in various periods of Hope's existence (Brown, R. I, 443-464; Ex. 19, pp. 1-2; R. I, 395-396).

It is perhaps not important to review this testimony in any great detail since the Commission wholly ignored the historical cost of money. Briefly, it showed that in the "early development period" of Hope from 1898 to 1907, when it was a pioneer in a new and highly speculative industry, public financing was impossible and private investors would not have put money into such a property as that of Hope without prospective earnings of 15% to 20%; that in the period 1908 to 1926 when Hope had reached "a

certain stage of maturity and permanency" but when there was little public financing of natural gas companies, capital could not have been attracted to it at any time in the period for less than 12% and "some more than 12% in certain of those years." In fact the average earnings-price ratio of stocks of mining and smelting companies was 13% and of oil producing and refining companies was 14%. In the 1921 period the yield on Aaa bonds was 6% as against less than 3% today and on Baa bonds more than 8% as against 4½% today. In the third period beginning in 1927 when public financing of natural gas securities was practicable and until 1934 the capital requirements of Hope could not have been financed on the basis of less than 10%, and in the final period of lower money rates from 1935 to the present not at less than 8% (Brown, R. I, 446-464).

In Exhibit 136 the amount of plant existing on December 31, 1938 which was constructed in each of these four periods was applied against the minimum rates of return shown for those periods to get a weighted average historical rate of return. This weighted average on the basis of Hope's original cost was found to be 11.83% and on the basis of the Commission Staff's adjusted book cost to be 11.61%.

The Staff presented no study as to past or historical rates of return and the Commission ignored Hope's evidence.

The action of the Commission in taking an adjusted book cost rate base with a modern streamlined current rate of return is clearly arbitrary and unreasonable. It cannot be supported on the prudent investment theory or any other.

## IV. VIEWED IN THEIR ENTIRETY THE RATES FIXED BY THE COMMISSION ARE TOO LOW BY ANY STANDARD.

*(Com. Brief, 21-33; Cleve. Brief, 24-27)*

Early in its brief the Commission claims that the rates prescribed by it, viewed in their entirety, "meet every test of reasonableness and fall far short of confiscation" (p. 25). In this section we shall first show that so viewed those rates are unreasonable on any standard and then consider the over-all matters to which the petitioners call attention.

### A. THE COMMISSION'S PRESCRIBED RATES ARE TOO LOW BY ANY STANDARD.

Little need be said under this heading. All that the Commission allows in its future rates in this case for annual return, depreciation and depletion is (R. I, 12, 53):

| | |
|---|---|
| For Return | $2,191,314 |
| For Depreciation and Depletion | $1,460,037 |
| Total | $3,651,351 |

For past rates it allowed even less (R. I, 12, 61).

This annual allowance for return is about 3.3% on the present value rate base of $66,000,000 claimed by Hope (Ex. 126, R. I, 481) and less than that return on the somewhat higher present value rate base found by the Ohio Commission as of June 30, 1937 (*supra*, pp. 8-9, 30). It is only slightly more than 4% of the over $50,000,000 true value in money of the interstate properties found for tax purposes by the State of West Virginia (*supra*, p. 30).

Moreover, it is equally inadequate if we test it by the prudent investment method of regulating rates as practiced in California where an undepreciated rate base is used and the annual depreciation allowance is based on the sinking fund method.

On the basis of the Commission's own findings as to "original cost" and using the California method of an undepreciated rate base the Commission's rate base for future rates would be as follows (R. I, 3-4):

| | |
|---|---|
| Physical Properties and Operated Leaseholds | $51,957,416 |
| Useful Unoperated Leaseholds | 566,105 |
| Working Capital | 2,125,000 |
| Net Capital Additions | 1,392,021 |
| Total | $56,040,542 |

On this undepreciated rate base the Commission's total allowance of $3,651,351 for annual return, depreciation and depletion is almost exactly 6½%. In other words by the California method and using the Commission's own findings it should have allowed Hope in rates at least as much *for return alone as it has actually allowed for both return and for depreciation and depletion.* Its own unadjusted figures thus show that upon its so-called prudent investment method it has included no allowance whatsoever for annual depreciation and depletion expense.

If in further pursuance of the California method we take an undepreciated rate base reflecting the true original cost of Hope's properties determined in accordance with the Natural Gas Act and consistently with the Commission's determination of operating expenses, that rate base for future rates would be as follows (R. I, 349, 364):

| | |
|---|---|
| Original Cost[38] | $70,593,000 |
| Working Capital | 2,125,000 |
| Net Capital Additions | 1,392,000 |
| Total | $74,110,000 |

On this undepreciated rate base the Commission's total annual allowance of $3,651,351 both for return and for

[38] Hope's original cost of physical properties and leaseholds as of December 31, 1938 plus 1939 and 1940 net additions as found by the Commission (R. I, 36).

depreciation and depletion is not quite 5%. Thus the Commission's total allowance not only includes nothing for depreciation and depletion expense but is 1½% shy of the rate of return the Commission allowed.

But this is not all. Had the Commission given any consideration whatever to a historical rate of return to accompany its "original cost" rate base it would have allowed a rate of return substantially higher than 6½%, in addition to depreciation expense on the sinking fund method of perhaps 1½%.

Thus it is clear that on either a present value or a prudent investment method of regulating rates, and even using the Commission's own findings, the rates fixed by its order are too low.

Moreover, in all the above computations no account is taken of the many respects in which the operating expenses of Hope were reduced and the amount available for return and depreciation consequently inflated. Thus, as heretofore shown, the Commission's allowance for depreciation and depletion expense omits all provision for depreciation and depletion of the well drilling and other costs that were not included in its rate base and for the net capital additions to 1942 that were included in its rate base. Hope's deep test well expenditures in 1940 are not included in expense. Federal income taxes as allowed are wholly inadequate. Net interstate revenues were arbitrarily increased by permitting Hope a wholly inadequate return on its West Virginia distribution plants. Hope's revenues were theoretically increased by appropriating to Hope practically all the earnings from the gasoline and butane operations of its affiliate, allowing substantially nothing for return on that property.

All of these matters and others only serve to accentuate the inadequacy of the rates fixed by the Commission.

**B. THE COMMISSION'S RATES ARE TOO LOW ON THE BASIS OF THE PRICE ALLOWED FOR HOPE'S PRODUCED GAS.**

There is another practical over-all test of the reasonableness of the Commission's order. The order in effect assumes that Hope can continue to sell abnormally large volumes of its own produced gas at prices reflecting costs over the last 45 years and which by any standard are unreasonably low.

The Commission's Staff's computation of Hope's net operating income from its interstate business at former rates was as follows (Ex. 133):

| | |
|---|---|
| 1937 | $3,244,904 |
| 1938 | 1,186,435 |
| 1939 | 3,020,246 |
| 1940 | 5,576,982 |
| 3-year average—1937 to 1939 | 2,483,862 |
| 4-year average—1937 to 1940 | 3,257,142 |

It is obvious at a glance that the Commission could not have ordered a reduction of $3,600,000 in the interstate rates as it did on the basis of the experience of any year prior to 1940 or on either a 3 or a 4-year average. In fact such a reduction was greater than its own computation of Hope's income in any one of those years except 1940.

The Circuit Court of Appeals on this point said (R. IV, 197):

> "*Selection of 1940 as test year.* The Commission selected 1940 without regard to the experience of the years immediately prior thereto, as the test year for determining expense of operation in fixing future rates. It is ordinarily unsafe thus to adopt the experience of a single year as a guide. *United Gas Public Service Co. v. Texas*, 303 U. S. 123, 145; *West Ohio Gas Co. v. Public Utilities Comm'n*, 294 U. S. 79, 81. We do not think that under the peculiar circumstances of the case, however, this action of the Commission can be condemned as arbitrary or unreasonable. The increased demand for gas resulting from war conditions,

made the experience of 1940 a safer guide for the future than that of prior years. Hope makes much of the fact that the winter of that year was more than ordinarily severe and that the increased demand for gas resulted in a large percentage of sales representing gas from its own wells, which did not involve payment of the charge required by its contracts on gas purchased from others. The increased demand due to war conditions, however, must necessarily have the same effect, so far as this matter is concerned. The experience of 1940 was the only experience properly comparable. In further proceedings, the experience following 1940 can be added to the experience of that year to form a longer and more dependable test period."

Our point on this is not concerned with total demands or sales. Obviously during the war period the industrial demand will be sufficient to maintain the 1940 and even higher volumes so long as they can be supplied. But the increased volumes above a normal amount to a considerable extent have had to be taken from Hope's own depleted reserves and the incremental cost allowed for this additional volume in the Commission's rates is so low by any standard as to discredit the Commission's whole rate-fixing formula and its results. This is a matter of crucial practical importance that requires some explanation.

The gas business in the Appalachian area is wholly unlike that in either the southwest or California. There are no longer any large wells. Hope's supply comes from 16,000 small wells widely scattered over the state, many of them producing oil as well as gas. Of these it owns 3,300 wells and purchases the production of the remaining 12,600 (*supra*, p. 5).

Its method of operation for many years has been to rely on purchased gas to meet the minimum demands of its daily market and to produce its own gas to supply the difference between the minimum and the extremely fluctuating maximum daily demands (Tonkin, Ex. 4, R. I, 132-142). This method enables Hope to buy purchased gas on a

steady load basis at a lower price than it would otherwise be required to pay (*ibid.*, 142). Thus in July, 1939, for example, on several days it produced substantially nothing from its own wells; in January, 1940 it produced large quantities in varying daily amounts ranging up to 175,000 M.c.f. per day (Ex. 2, Chart, 16).

Hope therefore uses its own wells as a balance on its system precisely as an artificial gas company would use a storage gas holder. So important is the maintenance of Hope's own reserves that in recent years it has during off-peak periods stored gas in some of its depleted fields nearest its markets with gas from more distant sources (Tonkin, Tr. 5813-5815).

When increased industrial activity arising from the preparedness program began to manifest itself in late 1939 and the daily demands upon it increased Hope could not provide itself with additional supplies from the Appalachian field because they are not available (Tonkin, R. I. 504). Accordingly in 1940 it was compelled to withdraw from its own reserves designed to maintain a balance on its system more than 10 billion cubic feet above the amount it had withdrawn in 1939 or does withdraw in any normal year.

The effect of these extraordinary withdrawals in 1940 upon costs when costs are computed as the Commission did in this case is most startling. Cleveland computed this cost in its reply brief before the Commission in a table which we reproduce as Appendix D, page 183, *infra*. The table is based entirely on figures taken from the Staff's exhibits. It shows that Hope withdrew from its own gas reserves in 1939 16.5 billion cubic feet and in 1940 26.8 billion cubic feet (as estimated by the Staff), an increase of 10.3 billion feet. It then shows in detail the direct costs of this gas for the two years 1939 and 1940 to be respectively 11.88¢ and 8.73¢ per M.c.f.

In addition Cleveland worked out the incremental cost to Hope of producing 10.3 billion cubic feet in 1940 over

and above the normal 16.5 cubic billion feet it produced in 1939. This it found to be, using the Staff's methods which were followed by the Commission, 3.64¢ per M.c.f. (Appendix D, page 183 *infra*).

Thus the Commission's order in this case is based on the assumption that Hope can continue for the indefinite future to produce from its own declining gas reserves 10 billion cubic feet more than average withdrawals of peace time and supply it at the well mouth or can purchase similar quantities, at a direct cost of less than 4¢ per M.c.f. And this in face of the admitted fact that Hope cannot replace this gas at any figure approaching this cost. Even its steady load purchased gas has been costing it an average of 18¢ per M.c.f. (Ex. 78, R. III, 309).

The Commission made findings that should have warned it that a rate order based solely on this war time experience was arbitrary. It found the following facts, the last column only being added as a matter of computation (R. I, 12):

| | 1939 | 1940 | Increase 1940 over 1939 |
|---|---|---|---|
| Revenues from Interstate Sales | $14,866,894 | $19,296,755 | $4,429,861 |
| Operating Deductions | 11,845,649 | 12,997,845 | 1,152,196 |
| Net Operating Income from Interstate Sales | $ 3,021,245 | $ 6,298,910 | $3,277,665 |

In addition the Commission found the total interstate sales in 1939 to be 41,350,569 M.c.f. and in 1940 to be 53,604,243 M.c.f., an increase of 12,253,674 M.c.f. (R. I, 51).

Thus it found that an increase in sales of 12.2 billion cubic feet was achieved by an increase in operating expenses, which it refers to as "Operating Deductions," of only $1,150,000, or at a cost to Hope of only 9¢ per M.c.f. That is, at a time when the average market cost to Hope of purchased gas in the West Virginia fields was 18¢ per M.c.f., the Commission in effect found that Hope could supply at delivery points 12 billion cubic feet from its own reserves or otherwise at a cost of only 9¢ per M.c.f.

Thus the Commission's order in this case is based on the assumption that Hope can continue for the indefinite future to supply 12 billion cubic feet at delivery points at a cost of 9¢ per M.c.f. These low costs are achieved of course in part by the omission of the drilling costs of the wells and by other rate base and operating expense findings by the Commission to which reference has been made. In part it is due also to the low initial cost of gas discovered over the years for the present value of which no allowance is made.

The Commission's order fails to recognize that the Hope system cannot function without a well maintained gas reserve to meet peak demands. The order requires Hope to sell what is an essential part of its plant at a fraction of its replacement cost and at a fraction of its value either in the market or to Hope. No matter what theories may be advanced to justify such a result the result condemns itself. It is the arbitrary application to an extractive industry with special problems of a strait-jacket rate making theory which the Commission itself points out it developed in connection with its regulation of electric companies (Com. Brief, 68).

## C. THE COMMISSION'S CLAIMS AS TO THE OVER-ALL REASONABLENESS OF ITS ORDER.

*(Com. Brief, 25-33)*

The Commission brief's first claim is that Hope's financial history justifies its order. Unless it is proper for the Commission now retroactively to regulate Hope's rates over the last 45 years Hope's financial history clearly shows that its recent rates have been entirely reasonable. Previously in this brief, *supra*, pages 11 to 13, we have set forth Hope's financial history since 1926—the first year of full operation of its present extended property. This shows that while its earnings from year to year have been most irregular, fluctuating as they do with both weather and industrial conditions, nevertheless on the average Hope has

earned for return, depreciation and depletion $4,150,000 or 7.7% of the average book cost of its fixed assets. From this record we know that those fixed assets are understated to the extent of $17,000,000.

Certainly there is nothing in that financial history that would justify the rates fixed by this Commission which are lower than the rates prevailing at any time during that 15-year period.

The Commission's next claim is that Hope's actual experience under the prescribed rates is such that it would have been justified in making a $1,091,790 larger reduction in rates than it made (Com. Brief, 28). This it seeks to prove by bringing into this record for the first time the annual reports Hope made to the Commission and calculations made therefrom and printed as its Appendix B. That at this date the record cannot properly be supplemented in this way has been decided by this Court (*West Ohio Gas Co. v. Public Utilities Commission of Ohio (No. 1)*, 294 U. S. 63). Aside from this, it should be pointed out that the Commission's order did not become effective until July 15, 1942 and that in consequence none of these annual reports can be used as experience under the new rates without substantial adjustments which the Commission's brief assumes to make.

However, if we take the Commission brief's own calculations in its Appendix B and make two simple adjustments, both of which are necessary in the interests of accuracy, the result is to show that on the Commission's own basis and theories the rate reduction ordered proved excessive by $600,000 in the year 1942.

Those two adjustments are:

1. The Commission brief's calculation (p. 141) starts with the revenues Hope would have received in 1942 if its former rates had remained in effect and with the Commission's findings of expenses for the year 1939, to which it adds the book increase in expenses between 1939 and 1942

to determine what the Commission would have found for 1942. But the Commission itself in fixing Hope's rates based its determinations exclusively upon the year 1940 without reference to prior years. (Opinion, R. I, 70). Accordingly the brief's calculation should likewise have been based upon the findings for 1940.

In Appendix E, page 185 below, we have set up the calculation exactly as the Commission brief shows it at page 141 except that 1940 is the starting point rather than 1939. All calculations are made by exactly the same method used by the Commission's brief.

2. In the second place, as the Commission brief recognizes in the footnote on page 141 but does not mention in its discussion, the net operating revenues computed in its Appendix B included the results of operation of the former Reserve Gas Company properties, merged into Hope on December 30, 1939, which by stipulation were excluded from consideration in this case (*supra*, page 19). A ready means of eliminating the revenues and expenses of these properties is furnished by the stipulation (Ex. 77) which sets forth the amounts of revenues, expenses and earnings to be excluded from 1940 data as attributable to these Reserve properties. It is a conservative assumption that the revenues and expenses of these properties would have been at least as much in 1942 as the stipulated 1940 amounts. Accordingly in Appendix E we have eliminated the Reserve property revenues and expenses in the exact amounts stipulated and in the exact manner that the parties did in eliminating them for 1940.

The net result of these two simple and necessary adjustments of the Commission brief's calculations as shown in column (5) of Appendix E is that the rate reduction which the Commission would have computed if it had based its rates upon 1942 operations rather than upon 1940 would have been $4,159,253 instead of the $4,757,452 (Com. Brief, 28) reduction in 1942 revenues actually resulting from its rate order. Thus instead of "earning $1,091,790 annually

in excess of a 6½% rate of return, if the 1942 level is taken as the criterion," as the Commission's brief claims (p. 28), *Hope is actually earning $600,000 less than the Commission would have allowed if it had used 1942 operations.*

So long as the experience of other years has been referred to it may also be observed that had the rates fixed by the Commission's order been in effect for the years 1937 to 1939 Hope's net operating income from interstate sales, using the Commission's determinations, would have been as follows (from Staff's Exs. 67, 67-A, 90, R. III, 224, 258, 349; Commission Counsel's Brief before the Commission, Appendix E; Commission Counsel's Reply Brief before the Commission, Appendix A; Opinion, R. I, 51-65):

| | | |
|---|---|---|
| 1937 | $ 708,653 | |
| 1938 | (1,394,164) | loss |
| 1939 | 333,502 | |
| 3-year average | ($117,336) | loss |

These three years include the year the complaint was filed, 1938, and one year's experience on each side. It is beyond controversy that the new rates would not have met any test of reasonableness in any one of these three years or even on the four year average including 1940.

It is next claimed that the rate base sought by Hope does not square with its operating experience since if Hope's claims as to rate base and operating expenses were allowed in full it would have only made a return of 3.27% for the 4-year period 1937-1940. This percentage is misstated, as shown in the footnote[37] below, but aside from this

---

[37] The 3.27% is the amount Hope claimed it would earn in the future on the basis of average 1937-1940 revenue and expense experience, but adding to expenses the substantially increased Federal income taxes, wage payments and other increased future expenses not reflected during 1937-1940. Its actual experience during these years, based on a $66,000,000 present value rate base, Hope claimed was as follows (Ex. 126, R. I, 481):

(*Continued on next page*)

the issue here is not whether the rate base and operating expenses as claimed by Hope are 100% acceptable. The Commission did not base its order on these claims.

The history of rate proceedings as set forth in the Statement, *supra*, pages 6 to 9, indicates a very clear reason why Hope did not attempt to secure a higher rate in the years immediately preceding 1940. The rates of East Ohio, its principal customer, and also the rates of Peoples, its second largest customer, were involved in litigation in those respective states (*supra*, p. 8; *Peoples Natural Gas Co. v. Pennsylvania Public Utility Commission*, 14 A. (2d) 133 (Pa., 1940)). In view of the affiliation between Hope and these companies it was not possible actually to make effective a higher rate even though the return being earned by Hope was not adequate.

Finally it is claimed with apparent seriousness (Com. Brief, 30-33) that doubtful items of substantial amount were resolved by the Commission in Hope's favor. As we understand what is urged here, the Commission could reasonably and not arbitrarily have done the following:

(1) Reduced the $33,712,000 rate base it allowed for the future by $26,000,000—to $7,712,000;

(2) Decreased its allowances for Hope's annual operating expenses by over $600,000;

(3) Allowed instead of its 6½% rate of return only 5½% or preferably 5%.

We apply these suggestions. A 5% rate of return on a $7,712,000 rate base amounts to less than $386,000. $560,000 of the operating expenses which it is suggested

---

(*Continued from preceding page*)

| | |
|---|---|
| 1937 | 3.98% |
| 1938 | 1.18% |
| 1939 | 3.36% |
| 1940 | 6.98% |

Even on its theories the Commission's Staff determined that in 1938 Hope was earning only 4.38% on a net book cost rate base of $31,465,000 (Ex. 90, R. III, 352).

the Commission might properly have eliminated consist of actual out-of-pocket payments for operating wages, property taxes and exploration costs (Opinion, R. I, 62) and for current administrative costs on current property construction (Opinion, R. I, 49-50). If these actual out-of-pocket expenditures of $560,000 are not allowed in operating expenses they must be paid out of the $386,000 return now suggested as reasonable. That is, of course, insufficient by $174,000.

Thus the "acoustics of such liberality" referred to in the Commission's brief (p. 33) are created from the argument that the Commission should reasonably have compelled Hope to operate at a $174,000 annual loss.

## D. CLEVELAND'S CLAIM THAT NO CONSTITUTIONAL QUESTION IS PRESENTED.

Cleveland's brief does not urge that the over-all results reached by the Commission are reasonable, except to state that "Nothing arbitrary was done by the Commission" (p. 56) and to reiterate that all of the Commission's findings "had a rational basis and are supported by substantial evidence" (pp. 38, 39, 46, 52 and 55). Instead, Cleveland argues that Hope is not injured because its parent corporation also owns the stock of East Ohio and Peoples, Hope's largest customers although its petition for certiorari raises no such question.

This argument proceeds upon the premise that Hope, as a corporation, is not a "person" within the meaning of the Fifth Amendment and hence is not in itself entitled to constitutional protection. That this premise is erroneous we need not say. *Covington and Lexington Turnpike Road Company v. Sandford*, 164 U. S. 578, 592; *Kentucky Finance Corporation v. Paramount Auto Exchange Corporation*, 262 U. S. 544, 550; *Grosjean v. American Press Co.*, 297 U. S. 233, 244. Cleveland's argument likewise assumes that the Ohio and Pennsylvania rate regulatory authorities will fail to reflect the Commission's rate reduc-

ing order, if it should be held valid, or will permit East Ohio and Peoples sufficient additional allowances to offset the confiscation of Hope's properties. The history of the effective rate litigation in these states to which we have called attention, *supra*, pages 6 to 9, denies this premise. In fact, the result of this regulation has been to prevent Hope from receiving fully compensatory rates in the pre-war years, a fact now attempted to be used by the petitioners to deny the force of Hope's evidence.

Irrespective of all this, the Natural Gas Act requires that rates be "just and reasonable" without regard to any question of affiliation and the validity of the Commission's orders under the Act is here in question. As the Commission's brief points out (p. 15), "In judicial review under the Natural Gas Act, the statutory and constitutional standards coalesce." Hence, the question is presented whether the Commission's rates are "too low" under constitutional standards, even assuming every argument made by Cleveland were correct.

## V. THE COMMISSION'S FINDINGS AS TO LAWFULNESS OF PAST RATES.

*(Com. Brief, 110-123; Cleve. Brief, 60-77)*

In 1939 Cleveland amended its original complaint against Hope and requested the Commission to determine that to the extent that Hope had charged East Ohio more than 30¢ per M.c.f., Hope had violated the Natural Gas Act ever since June 21, 1938, the effective date of the Natural Gas Act (R. II, 15). The Pennsylvania Public Utility Commission's complaint filed in 1939 included a request that the Commission determine that Hope had violated the Natural Gas Act since June 21, 1938 by reason of its charges to Peoples, Fayette and Manufacturers (R. II, 20, 22, 24). Neither Cleveland nor the Pennsylvania Commission introduced any evidence in support of these or other charges.

As a part of its final determinations the Commission made its "Findings as to the Lawfulness of Past Rates" (R. I, 8) and argued its right to make these findings in its Opinion (R. I, 67-69). These findings, where specific, are directed to Hope's past rates to East Ohio only. They ignore the request of the Pennsylvania Commission.

It is to be noted that these are not findings that Hope's existing interstate rates are unreasonable, which finding is required before the Commission can fix future rates and was made in its "Order Reducing Rates" (R. I, 1), but are separate findings that Hope's interstate rates to East Ohio on file *in the past* were unreasonable and "unlawful" and, further, are separate findings as to precisely what the "lawful" past interstate rates should have been.

The Commission's lack of statutory authority to make these retroactive rate determinations, their otherwise unreasonable and arbitrary character, and their reviewability have been analyzed and stated so clearly by Judge Parker (R. IV, 199-203) that discussion here is not really required. Furthermore, in *Public Utilities Commission of Ohio v. United Fuel Gas Co.*, 317 U. S. 456, this Court analyzed the rate provisions of the Ohio public utility law applicable in that proceeding which are substantially identical with the rate provisions of the Natural Gas Act. It said (317 U. S., 464):

> "If, after such hearing, the Commission finds that the rate or charge is unjust, unreasonable, or otherwise unlawful, it must 'fix and determine the just and reasonable rate, fare, charge, toll, rental or service *to be thereafter* rendered, charged, demanded, exacted or collected for the performance or rendition of the service, and order the same substituted therefor.' § 614-23 (italics added). The statute in terms thus gives the Commission power to prescribe such rates prospectively only. If, after notice and hearing, the Commission finds rates to be unlawful, it can then fix the just and reasonable rates 'to be thereafter' charged. The establishment of new rates must be

preceded by a finding that the old rates are unjust and unreasonable, and the new rates are prospective as of the date they are fixed. *There is no basis in the statute for concluding that the Commission's orders can be retroactive to the date when the Commission's inquiry into the rates was begun; on the contrary, the explicit language of the statute precludes such a construction.*"

Nevertheless, in view of the extended arguments of the petitioners, we point out:

**A. THE COMMISSION HAS NO AUTHORITY UNDER THE NATURAL GAS ACT TO MAKE THESE RETROACTIVE DETERMINATIONS.**

1. Section 5(a) of the Natural Gas Act (15 U. S. C. 717d(a)) makes it crystal clear that the Commission's rate making authority is prospective only. As there stated, it may, after a hearing—

> "determine the just and reasonable rate, charge, classification, rule, regulation, practice or contract *to be thereafter observed and in force*, and shall fix the same by order:"

The Commission admitted the statute in its Opinion, stating (R. I, 68):

> "The Commission does not have the authority to fix rates for the past and to award reparations."

Despite this the Commission has in fact attempted "to fix rates for the past." It has determined that Hope's interstate rates were unlawful in designated amounts in 1939, 1940 and since (Finding (21), R. I, 12) and specifically as to Hope's rates to East Ohio it finds that they should have been 34¢ per M.c.f. in 1939 and 28.5¢ in 1940.[38] We note that during these years, and previously, Hope's actual filed rate to East Ohio was about 36.5¢ and that had the

---

[38] Total allowed "compensation" shown in Finding (23) (R. I, 12) divided by quantities sold shown at page 40 of the Opinion (R. I, 51).

Commission applied its theories to 1937 and 1938 the East Ohio rates for those years on its own Staff's figures would have been 33¢ for 1937 and 39.5¢ for 1938,[39] or an average of almost 36.5¢.

What is intended to be done with these rates so fixed for the past is perfectly plain from the Commission's Opinion. They are to be reported to The Public Utilities Commission of Ohio in connection with its pending hearings as to the validity of certain 1939 and 1940 Cleveland rate ordinances specifying rates for East Ohio[40] (Opinion, R. I, 69) and the Ohio Commission is supposed to accept them as conclusive determinations of the rates East Ohio should have paid Hope in the past under the following pronouncement of the Commission in this case (Opinion, R. I, 69):

> "Since the enactment of the 1938 Natural Gas Act this Commission has had exclusive jurisdiction to determine the lawfulness of the interstate wholesale rates charged by Hope and other natural gas companies."[41]

Obviously the intended effect of the Commission's "Findings As to Lawfulness of Past Rates" in this case is "to

---

[39] As shown *supra*, pages 104-105, the average rate for all of Hope's interstate sales which the Commission would have found on its own theories was 32.7¢ for 1937 and 39.1¢ for 1938. The Commission would have used the next even half cent, or 33¢ for 1937 and 39.5¢ for 1938, as the East Ohio rate. This is the way in which it derived its 34¢ East Ohio rate for 1939 and its 28.5¢ rate for 1940.

[40] As we pointed out in the Statement, *supra*, page 9, these ordinances are attempts by Cleveland to enforce beyond June 30, 1939 a rate which was held grossly confiscatory by the Ohio Commission in 1939 and by the Supreme Court of Ohio in 1940 (*Cleveland* case, *supra*, pp. 8-9). Cleveland's various claims (pp. 2, 63) that its consumers will be entitled to a $20 and a $13 per consumer refund if its views are sustained by this Court is merely a claim and nothing more.

[41] But see Section 22 of the Natural Gas Act, *infra*, pp. 133-134.

fix rates for the past" and through action of the Ohio Commission, which is to recognize the Power Commission's "exclusive jurisdiction" since 1938, "to award reparations," both of which the Commission frankly admits it has no authority to do. That Cleveland so construes its effect it states (Cleve. Brief, 63).

On this point the court below properly said (R. IV, 200):

> "* * * As the Commission itself says, it was not given authority to fix rates for the past or to award reparations on account of past rates. If it was not given the power to fix past rates, or award reparations based upon their unreasonableness, it certainly was given no power to do the same thing indirectly by making findings of fact as to past rates to be given effect in rate proceedings before state commissions. No intention on the part of Congress to vest any such unusual power in a commission ought to be indulged unless conferred in the plainest terms; and not only is it not plainly given here, but such power cannot be spelled out of the statutes on any theory of interpretation with which we are familiar."

2. That any such power would have to be found directly in the Act, and not by speculative implications from the general powers of the Commission under Sections 4(a), 5(a), 5(b), 14(a) and 17, which are the sections of the Act referred to by the Commission in its Opinion, is plain because Congress is well aware of the two separate kinds of rate making power—prospective and retroactive—and of the limitations that must be placed, as a practical matter, upon retroactive rate making powers if any such powers are granted. Congress's experience with these separate functions in connection with the Interstate Commerce Commission has been complete.

Originally the Interstate Commerce Commission was given no other power as to rates than the *quasi*-judicial power of investigating past rates on complaint of a shipper

and if it found them unreasonable to award reparation. The Hepburn Act of 1906 added to this *quasi*-judicial power the *quasi*-legislative power of fixing rates for the future if it found existing rates unreasonable (34 Stat. 589, 49 U. S. C. Sec. 15). But these two powers have always been regarded as separate and distinct. In *Baer Brothers Mercantile Company v. Denver & Rio Grande Railroad Company*, 233 U. S. 479, Mr. Justice Lamar said (p. 486):

> "But awarding reparation for the past and fixing rates for the future involve the determination of matters essentially different. One is in its nature private and the other public. One is made by the Commission in its quasi-judicial capacity to measure past injuries sustained by a private shipper; the other, in its quasi-legislative capacity, to prevent future injury to the public."

See also *Arizona Grocery Co. v. Atchison, Topeka & Santa Fe Railway Co.*, 284 U. S. 370; *Interstate Commerce Commission v. Cincinnati, New Orleans and Texas Pacific Railway Company*, 167 U. S. 479.

Had Congress intended to vest *quasi*-judicial power in the Commission to determine the reasonableness and lawfulness of past rates and declare them for use by State commissions or others, it would have done so in express language as it has done in the case of the Interstate Commerce Commission. If the analogy of the Commerce Act were followed, such a finding would be provided for only upon complaint by the customer directly affected, made *within some short fixed period of limitations*. Such a statute would either have made that finding *prima facie* evidence in a court in which it was to be enforced or have authorized the Commission itself to make an order respecting it. Its effect would not have been left an uncertain matter for future debate. Here the Commission's brief seems most doubtful as to their effect (pp. 113-114) and certainly not in agreement with the Commission and Cleveland.

3. The rate regulatory scheme of the Natural Gas Act set forth in Sections 4 and 5 is entirely clear and complete. Rates must be filed with the Commission and until they are changed for the future by or with the approval of the Commission they "prevail." This is precisely what the Solicitor for the Commission said in explaining the Natural Gas Act to the Congressional Committee before its adoption.[42]

Under such provisions as Sections 4 and 5 of the Natural Gas Act it is perfectly well settled that the rate which is filed with the Commission is the only rate the utility can accept or its customers can lawfully pay, regardless of any claim that it is unreasonable, until changed prospectively by the Commission. *Texas and Pacific Railway Company v. Abilene Cotton Oil Company*, 204 U. S. 426; *Louisville & Nashville Railroad Company v. Maxwell*, 237 U. S. 94; *Dayton Coal and Iron Company v. Cincinnati, New Orleans and Texas Pacific Railway Company*, 239 U. S. 446 and other cases.

Congress obviously recognized that to confer upon the Commission jurisdiction to say that wholesale rates legally received and paid in the past in accordance with filed schedules were nevertheless unlawful and in violation of the Natural Gas Act would leave both the selling and purchasing gas companies in the greatest confusion. It is significant that the first draft of the Public Utility Act of 1935, which was the model for the subsequently enacted Natural Gas Act, contained a provision (Sec. 213) authorizing the issuance of reparation orders. This section was eliminated from the Bill by the Senate Committee on Interstate Commerce, together with another section. As to these sections the Committee said:

---

[42] *Hearing before a Subcommittee of the Committee on Interstate and Foreign Commerce, House of Representatives, Seventy-Fourth Congress, Second Session, on H. R. 11662*, pages 28-29 (U. S. Government Printing Office, Washington, 1936).

"They are appropriate sections for a State utility law but the committee does not consider them applicable to one governing merely wholesale transactions." (*Report of the Senate Committee on Interstate Commerce on the Public Utility Act of 1935*, 74th Congress, 1st Session, Senate Report No. 621, page 20, see Appendix H hereto, page 150.)

Reviewing these considerations the court below properly observed (R. IV, 202):

"When rates were filed with the Commission pursuant to section 4(c) of the Act they became the only lawful rates which the utility could charge or accept. Cf. *L. & N. R. Co. v. Maxwell*, 237 U. S. 94. Until changed by the Commission under the power granted pursuant to section 5(a) they were binding alike upon the company and its customers; and, in the absence of a provision for award of reparation, there could be no occasion for a determination of their reasonableness except as reason for changing them in an order prescribing rates for the future."

4. Finally, we note that the Natural Gas Act itself states that the Commission shall have no jurisdiction to find anything "unlawful" and hence a violation of the Act, except as basis for exercising its prospective rate fixing power (Section 5(a), 15 U. S. C. 717d (a)). If the Commission wants to secure a determination as to the claimed unlawfulness of Hope's past rates to help the City of Cleveland or others it must proceed in the District Court where Hope will have its day in court. Section 22 of the Act provides:

"Sec. 22. The District Courts of the United States, the District Court of the United States for the District of Columbia, and the United States courts of any Territory or other place subject to the jurisdiction of the United States *shall have exclusive jurisdiction of violations of this Act* or the rules, regulations, and orders thereunder, and of all suits in equity and actions at law, brought to enforce any liability or duty created by, or to enjoin any violation of, this Act or any rule,

> regulation, or order thereunder. Any criminal proceeding shall be brought in the district wherein any act or transaction constituting the violation occurred. Any suit or action to enforce any liability or duty created by, or to enjoin any violation of, this Act or any rule, regulation, or order thereunder may be brought in any such district or in the district wherein the defendant is an inhabitant, and process in such cases may be served wherever the defendant may be found. Judgments and decrees so rendered shall be subject to review as provided in sections 128 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 225 and 347). No costs shall be assessed against the Commission in any judicial proceeding by or against the Commission under this Act."

Language could hardly be clearer. "Exclusive jurisdiction of violations of this Act" is vested in the District Courts and ergo is not vested in the Commission. If Hope has violated the Act by its former rate schedules as is claimed, jurisdiction to determine that matter is in the District Courts.

5. That *quasi*-legislative regulatory acts such as the Natural Gas Act do not confer the power to make any retroactive findings as to reasonableness of filed rates unless expressly so provided, is so clear that litigation has rarely been necessary. The theory adopted by the Commission in this case was once tried and promptly disposed of in *Great Western Portland Cement Co. v. Public Service Commission of Kansas*, 121 Kans. 531, 247 Pac. 881 (1926) where the court said (247 Pac. 883):

> "The language of the present statute does not appear to us to give authority, expressly or by fair or even liberal interpretation, for the commission to make findings as to the reasonableness of a rate previously charged or as to what rate would at that time have been reasonable."

More specifically, the very construction of the Natural Gas Act adopted by the Commission in its Opinion had

already been denied by the Supreme Court of Ohio in the *Cleveland* case, *supra*, page 9. During the course of the hearings before the Ohio Commission as to the reasonableness of the Hope-East Ohio rate, Cleveland requested the Ohio Commission to stay its decision until the Federal Power Commission had retroactively adjudicated the "lawfulness" of the Hope-East Ohio rate. The Ohio Commission denied this stay and the Ohio Supreme Court affirmed this action as proper, saying (137 O. S., 253-254, 28 N. E. (2d), 613):

> "Any river rate the Federal Power Commission might designate would be of an entirely prospective nature and would consequently be of no benefit or controlling force in the present proceedings."

No other interpretation of the clear provisions of the Natural Gas Act is possible and the Circuit Court of Appeals properly so held.

The arguments made by the petitioners here that jurisdiction in the Commission to adjudge and in effect fix rates in the past is to be "implied" from various general provisions of the Natural Gas Act (Com. Brief, 114; Cleve. Brief, 63-65, 67-69) were most carefully considered by the court below which said (R. IV, 201):

> "In none of these sections is any power granted to make findings as to reasonableness of past rates 'as an aid to state regulation'; and in all of them taken together and construed in the light most favorable to the existence of the power, there is no indication of any intention on the part of Congress to grant such power. We cannot escape the conclusion that, if it had been the intent of Congress to grant unusual power of this sort, it would have said so plainly."

It likewise carefully considered the argument here again advanced (Com. Brief, 117; Cleve. Brief, 69-76) that rate payers "may be left without a forum to challenge the lawfulness of interstate wholesale gas rates prevailing be-

tween the date of the Act's passage and the effective date of a Commission rate-fixing order." The rate payers' forum is of course the Federal Power Commission and, as the court pointed out, that forum can act forthwith "in view of the provision of the statute for the entry of interim orders" (R. IV, 202).

Had that forum in this case acted forthwith upon the filing of Cleveland's complaint in 1938 it would have found, as the record in this case shows, that Hope's filed rate was not only reasonable but too low. It should have been even on the Commission's present rate-making theories over 39¢; it actualy was 36¢ (*supra*, p. 104). There is, therefore, no question involved here of Hope filing an unreasonable rate and keeping it in effect "while defying the Federal Power Commission with its limited staff to determine and fix just and reasonable rates to be effective only after many years" (Cleve. Brief, 69). We also note that the rate Hope filed was found reasonable by the Ohio Commission in 1939 and by the Ohio Supreme Court in 1940 (*Cleveland* case, *supra*, pp. 8-9).

It is likewise significant that Clevelaud's motion for an interim order reducing Hope's rates to East Ohio in the sum of $662,000 a year filed in September, 1940, was denied by the Commission, after full consideration, on December 20, 1940, although without prejudice to its final determination (R. II, 43-44). All of Hope's evidence in chief was then in. Had the Commission granted Cleveland's motion no one would ever have claimed the Commission had authority to fix retroactively the very much larger reductions for 1940, 1941 and 1942 it has now made. *Arizona Grocery Company v. Atchison, Topeka & Santa Fe Railway Co., supra*, page 131. Certainly the Commission on any reasonable standard of administrative conduct should not be permitted greater retroactive powers because it then found no basis for reducing Hope's filed East Ohio rate in any amount.

The record also shows that the time involved in this case, referred to in Cleveland's brief, was not caused by Hope. All of Hope's direct evidence was in by the summer of 1940 and the Commission then delayed the presentation of its evidence until the spring of 1941 (Tr. 1970, 2175-2176). Thus what the petitioners are really contending for is that the Commission can commence an investigation of rates which at that time are wholly reasonable on any theory, continue it for years, and finally determine that in some of these years the rate was "unlawful" and fix a hindsight rate for these years retroactively and so Cleveland states (Cleve. Brief, 75).

Had Congress intended any such power in the Commission it could easily and would obviously have said that the Commission's rate order would be effective from the date of the filing of a complaint or the initiation of an investigation. This it did not do. If Cleveland desires to have the Natural Gas Act amended to accomplish this result its forum is Congress and not this Court. Congress, we submit, would not legislate as the petitioners request this Court to legislate.

Nor is there anything in *Atlantic Coast Line Railroad v. Florida*, 295 U. S. 301 and *United States v. Morgan*, 307 U. S. 183, referred to by the petitioners (Com. Brief, 120-121; Cleve. Brief, 66-69), which supports the Commission's usurpation of retroactive rate-making power in this case. In both cases the federal regulatory agency had issued rate orders which were subsequently held invalid, solely by reason of procedural defects. In both cases the lower court, sitting as a court of equity, had control of the disposition of the difference between the old rates and the new rates thus invalidly prescribed. In both cases the regulatory agency subsequently and validly held the rates prescribed in the original order reasonable. All this Court held was that the court of equity below should dispose of the differences arising during the period *after* the first order in

accordance with the findings made by the regulatory agency. There was, and could be, no holding substaining the power of a regulatory agency to determine and fix "lawful" rates for any period before the original rate order was entered, as the Commission sought to do here.

The Commission's excursion beyond its statutory rate-making powers in the present case was properly curbed by the Circuit Court of Appeals.

## B. THESE RETROACTIVE DETERMINATIONS ARE ARBITRARY AND INVALID.

Wholly apart from its lack of statutory authority to make retroactive rate determinations, those made by the Commission in this case are otherwise arbitrary and invalid. As to this we note:

1. They are based upon the Commission's same unlawful, arbitrary and unconstitutional bookkeeping theories of rate regulation and findings as to rate base, rate of return and operating expenses which it applied in its "Order Reducing Rates." Everything we have heretofore said thereon applies equally to the Commission's figures as to past rates.

2. They are based on the arbitrary assumption that Hope has paid less than $195,000 of federal income taxes in the years 1939, 1940, 1941 and 1942 whereas as we have seen Hope's actual taxes were $4,500,000 more than this (*supra*, p. 104).

3. In addition, the Commission entirely ignored the recommendation of its own counsel that it use the average period 1937-1940 in considering the reasonableness of past rates. Instead it made separate and individual determinations solely for the years 1939 and 1940, considering each year singly and separately in retrospect, just as if each year's business was a wholly separate operation, which could be successfully predicted on January 1 of that year.

In so doing the Commission adopted what Commissioner Manly in the course of oral argument almost characterized as "the rubber ball theory" of fixing rates when he said to Cleveland's attorney (Tr. 6896):

"• • • you do not have a rate bouncing up and down from year to year, do you?"

The Commission's "rubber ball theory" of retroactive rate making prescribes a standard of conduct under the Natural Gas Act with which no natural-gas company can possibly comply. The results of a year's operation are not known accurately until the company's books are closed in the spring of the following year. Nevertheless on this theory, on January 1 of 1937 Hope should have foreseen that its 36¢ average rate would be too high for that year as its business finally worked out and reduced it to 32.7¢. On January 1, 1938 it should have foreseen that 32.7¢ would be too low for 1938 and raised it to 39.1¢, and so on indefinitely. The Commission holds that Hope should have done just this and that it violated the Natural Gas Act because it did not.

This utter impracticability the Circuit Court of Appeals necessarily recognized (R. IV, 203).

Petitioners argue (Com. Brief, 122; Cleve. Brief, 77) that *West Ohio Gas Co. v. Public Utilities Commission of Ohio*, 294 U. S. 63, 79, demonstrates this holding by the court below as its "final error." There the Ohio Commission was acting under the special ordinance appeal provisions of the Ohio statutes, under which it is expressly given power retroactively to substitute just and reasonable rates for the specific ordinance period if it finds the ordinance rate appealed from is invalid (Ohio General Code, §§ 614-44 *et seq.*; 294 U. S., 66, 80). The utility can, as it there did, suspend the ordinance rate and continue collection of its pre-existing higher rate by giving bond to refund any excess over the rate finally fixed or approved by the Ohio Commission (*ibid.*; see *Cleveland* case, *supra*, n. 9). Thus the utility

commits itself to abide by future retroactive rate orders, if valid, in exchange for the right to continue higher collections. It is of course entitled to have its refund liability determined on the facts actually prevailing during the ordinance period, as this Court held. But in absence of this commitment under these special ordinance appeal sections, it is not under the Ohio statutes subject to retroactive rate and refund orders, and is not expected to guess each year with absolute precision what the Ohio Commission would decide its rates should have been upon subsequent survey. *Public Utilities Commission of Ohio v. United Fuel Gas Co., supra,* pages 127-128.

This citation of the *West Ohio* case demonstrates that what Cleveland and the Commission attempted to do in the present case was to add to the Natural Gas Act the special features and to apply the particular considerations governing retroactive rate determination in the case of municipal rate ordinances in Ohio, with which Cleveland is familiar, but which in Ohio are added to the law by special statutory provision. The court below properly set aside this attempt.

## CONCLUSION.

For the foregoing reasons it is respectfully submitted that the judgment below should be affirmed.

## THE LEGISLATIVE HISTORY OF SECTION 6 OF THE NATURAL GAS ACT.

Section 6 of the Natural Gas Act was copied directly from Section 208 of the Federal Power Act, which was enacted as part of the Public Utility Act of 1935. This Public Utility Act of 1935, as originally introduced (Senate Bill 1725 and House Bill 5423, 74th Congress, 1st Session), included a provision as to the rate base applicable both to Title II of the Act (the Federal Power Act) and Title III (regulating natural-gas companies), as follows:

> "Sec. 211. (a) The Commission shall have power to ascertain for the purposes of this title and title III the actual legitimate prudent cost of the property of every public utility, and every fact which in its judgment may or does have any bearing on the determination of such cost.
>
> "• • •
>
> "(c) In determining just and reasonable rates, the Commission shall fix such rate as will allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question."

The Senate Committee on Interstate Commerce reported out a revised version of the Public Utility Act of 1935 (S. 2796), omitting Title III. The section quoted above was renumbered as Section 208 of the Federal Power Act and, as introduced, reported and passed by the Senate, provided as follows:

> "ASCERTAINMENT OF COST OF PROPERTY; RATE BASE
>
> "SEC. 208. (a) The Commission may investigate and ascertain the actual legitimate cost of the property of every public utility, the depreciation therein, and every fact which in its judgment has any bearing on the determination of such cost or depreciation.
>
> "(b) Every public utility upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed

regarding the cost of all additions, betterments, extensions, and new construction.

"(c) In determining just and reasonable rates, the Commission shall fix such rate as will afford the public utility an opportunity to earn a fair return on a rate base not in excess of the actual legitimate cost of the property used and useful for the service in question less the accrued depreciation therein." [43]

The report of the Senate Committee on Interstate Commerce on this bill pointed out that this section represented an attempt to induce the Supreme Court to uphold prudent investment as the rate base (see Statement A, page 147 below).

The House Committee on Interstate and Foreign Commerce substantially amended the Senate Bill (S. 2796) and changed Section 208 of the Federal Power Act to read as follows, in which form it was passed by the House and eventually enacted by Congress:

"ASCERTAINMENT OF COST OF PROPERTY

"Sec. 208. (a) The Commission may investigate and ascertain the actual legitimate cost of the property of every public utility, the depreciation therein, and, when found necessary for ratemaking purposes, other facts which bear on the determination of such cost or depreciation, and the fair value of such property.

"(b) Every public utility upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction." (49 Stat. 853, 16 U. S. C. Sec. 824g)

---

[43] Quoted from the three printed copies of S. 2796 in the Senate as follows: S. 2796, introduced, read twice and referred to the Committee on Interstate Commerce May 7 (calendar day, May 9), 1935; S. 2796 (Report No. 621), Calendar No. 651, reported to the Senate, May 13 (calendar day, May 14), 1935; S. 2796, passed the Senate May 13 (calendar day, June 11), 1935.

The report of the House Committee pointed out that the provision in Section 208(c) of the Federal Power Act as passed by the Senate, quoted above, that cost be used as the rate base, was omitted from the revised bill reported to the House (see Statement B, p. 148 below). In explaining this change in Section 208 upon the floor of the House, Congressmen Lea and Cole, respectively chairman and a member of the sub-committee which redrafted the bill, pointed out that the change was necessary in order to make the section constitutional and that it would require the consideration of reproduction cost as well as original cost in the rate base (see Statements C and D, pages 149 and 150 below).

In the conference between the Senate and the House upon the various amendments, Section 208 of the Federal Power Act as passed by the House was not changed but was accepted by the Senate, and was enacted in the form quoted last above (see Statement E, page 152 below).

The Natural Gas Act itself was enacted in the 75th Congress, 1st Session, as H. R. 6586, originally introduced by Congressman Lea as H. R. 4008. Section 6 of the Natural Gas Act as initially introduced and as finally enacted was identical with Section 208 of the Federal Power Act as finally enacted except for the substitution of "natural-gas company" for "public utility." Section 14 of the Crosser Bill, H. R. 5711, which was introduced as an alternative to Mr. Lea's bill and considered by the House at the same time, was likewise identical with Section 208(a) of the Federal Power Act.

At the hearings on the Natural Gas Act before the House Committee on Interstate and Foreign Commerce on March 24, 1937, Mr. Harry R. Booth, counsel for the Illinois Commerce Commission, and Dr. Milo R. Maltbie, Chairman of the New York Public Service Commission, appeared as advocates of the Act. In the discussion between them and the members of the Committee it was apparent that everyone considered that under the Act the present fair value of

a natural-gas company's properties, determined upon consideration of original cost and reproduction cost, would be the rate base (see Statement F, p. 154 below). In the Committee report to the House and the debate upon the Natural Gas Act there was little discussion of the rate base but Congressman Lea, then Chairman of the House Committee, referred to the Committee's previous consideration of the provisions of Section 6 and stated that it had decided to cut out detailed provisions as to the rate base and "stay with the safe and unquestionably constitutional provision we have here" (see Statement G, page 158 below).

Section 6 of the Natural Gas Act was passed by the House and by the Senate without further comment.

Statement A

## SENATE COMMITTEE REPORT ON THE PUBLIC UTILITY ACT OF 1935

"74th Congress, 1st Session" — SENATE — Report No. 621

### "PUBLIC UTILITY ACT OF 1935

"May 13 (calendar day, May 14), 1935.—Ordered to be printed

"Mr. WHEELER, from the Committee on Interstate Commerce, submitted the following

### REPORT

(To accompany S. 2796)

* * * * *

(Page 20):

"G. *Rates.*—Section 205 (b), transferred from section 202 (c) of the original bill, has been modified by prohibiting merely undue, instead of all, preferences or prejudices in rates. The provisions defining with particularity the power of the Commission to investigate single rates and to fix standards of service (former secs. 208 (b) and 210) and the section authorizing the issuance of reparation orders (former sec. 213) have been eliminated. They are appropriate sections for a State utility law, but the committee does not consider them applicable to one governing merely wholesale transactions. The provision requiring the fixing of rates upon the basis of the actual cost of the property devoted to the service in question (now sec. 208 (c)) has been modified so as to make clear that the rate base is to be no higher than the actual legitimate cost of the property. Furthermore, it is expressly provided that the accrued depreciation of property is to be deducted from the rate base, and the section (302 of S. 1725) requiring the sinking-fund method of depreciation accounting has been

eliminated. This practice is contrary to that of most of the States in the country and the committee is of the opinion that its introduction in a Federal statute would cause unnecessary confusion and hardship."

* * * * *

(Page 52):

"Section 208. Ascertainment of Cost of the Property

"Subsection (a) authorizes the Commission to investigate and ascertain the actual legitimate cost of the property of every public utility and the depreciation therein.

"Subsection (b) provides that every public utility upon request shall file with the Commission an inventory of its property and a statement of the original cost thereof and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction.

"Subsection (c) provides that in determining just and reasonable rates the Commission shall fix such rate as will afford the utility an opportunity to earn a fair return upon a rate base not in excess of the actual legitimate cost of the property used and useful for the service in question, less the accrued depreciation therein.

"Rate regulation must eventually be based on prudent investment. Recent decisions of the Supreme Court, and the respect which the Court has always paid to the constitutional interpretations of the coordinate branches of the Government, afford grounds for hope that this rule which the committee considers essential to effective rate regulation will be sustained if the Congress should now definitely adopt it as a legislative policy. This would present the case to the Court in an entirely new light."

## HOUSE COMMITTEE REPORT ON THE PUBLIC UTILITY ACT OF 1935

"74th Congress, 1st Session } HOUSE OF REPRESENTATIVES { Report No. 1318

### "PUBLIC UTILITY ACT OF 1935

"June 24, 1935.—Committed to the Committee of the Whole House on the state of the Union and ordered to be printed

"Mr. RAYBURN, from the Committee on Interstate and Foreign Commerce, submitted the following

**REPORT**

(To accompany S. 2796)

* * * * *

(Page 30):

"Section 208. Ascertainment of Cost of Property

"The Commission is authorized under subsection (a) to ascertain the actual legitimate cost of the property of public utilities, the depreciation therein, and, when necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property. As an aid to such ascertainment, the public-utility companies may be required, under subsection (b), to file with the Commission an inventory of all or any part of their property, a statement of its original or historical cost and to keep the Commission advised as to the cost of additions, betterments, extensions, and new construction.

"In the Senate bill subsection (c), making the cost as ascertained under subsection (a) the base upon which the Commission shall fix rates, is omitted from the bill as reported."

* * * * *

**STATEMENT BY CONGRESSMAN LEA ON THE PUBLIC UTILITY ACT OF 1935 IN THE HOUSE OF REPRESENTATIVES, JUNE 28, 1935.**

(Congressional Record, Vol. 79, Part 9, p. 10378, 74th Cong., 1st Sess.):

* * * * *

**"RATES**

"This bill also involves the question as to the rate base that should apply in governing the rates for public utilities. The bill contains the general rule that rates must be just and reasonable. The committee would like to have been able to provide a better standard of valuation as a rate-making base, but after considering the question fully we determined it would be a futile thing to do. After the recent decision of the Supreme Court in a Maryland telephone case it is practically a futile thing, in my judgment, for any legislative body to try to write a rate-making base.

"The Constitution has established a rate-making base that cannot be decreased or minimized; so when a legislative body attempts to write a rate-making base, we may add to the burden that may be placed upon the consumers of electricity, but we cannot subtract from their burden on account of anything that we may write in the way of a rate base. So without attempting to go any further, we have provided that rates shall be reasonable and just, and under the Supreme Court decision that means that the valuation must be based upon the current value of the property.

"Cost is an element of the rate base, but only an element. The cost of reproduction might be an element, but only an element. The one question is the current value of the property, and the Supreme Court will permit no deviation from this principle."

* * * * *

**Statement D**

**STATEMENT BY CONGRESSMAN COLE ON THE PUBLIC UTILITY ACT OF 1935 IN THE HOUSE OF REPRESENTATIVES, JUNE 28, 1935.**

(Congressional Record, Vol. 79, Part 9, p. 10384, 74th Cong., 1st Sess.):

* * * * *

"* * * The Commission is empowered to determine the value of properties used in production and transmission of electric energy and to fix the rates and charges therefor. This is confined, naturally, to such part of the business as the Commission controls, leaving to the States that which is of intrastate character. The recent decision of the Supreme Court in the case of West and others against Chesapeake & Potomac Telephone Co. of Baltimore City, delivered June 3, 1935, has been most helpful in connection with framing this important section. There is nothing more important, in our judgment, when we come to deal with this entire subject than the setting up of necessary machinery whereby the Federal Government can appraise and value, for rate-making purposes, that part of the electric-utility business which is interstate in character and beyond the jurisdiction of the State regulatory agencies. Much of the delay and expense incident to rate cases conducted by the States has been directly attributable to the technicalities raised and the expense necessary for the State commission to properly cope with the matter.

"The bill was originally drawn on the theory that for the purpose of just and reasonable rates the Commission should determine the actual and prudent cost of the property less accrued depreciation thereon. Mr. Justice Roberts, in delivering the opinion of the Court in the Telephone case, *supra*, made it very clear that such a provision would be unconstitutional and it was therefore stricken out. In lieu thereof there is new language and while that may not be entirely clear, it was inconceivable to those of us serving on the subcommittee that any State or National commission establishing valuation of a public utility for rate purposes should do other than follow the very clear formula

sideration alone as to value such as legitimate cost or prudent cost, is sufficient; but all elements must be taken into account, such as reproduction value, actual cost, going value, proper depreciation allowance, so that in the end, after considering the aforegoing and such other elements of value as are essential, leave a figure upon which the rate established thereon will not be confiscatory. The dissenting opinion by Mr. Justice Stone on this case was also most helpful in clearing up the difficulties the commissions and courts have had in stating with definiteness that the theory of rate making outlined in Smith and Ames is still the rule, and if not, how it has been changed, by later decisions."

* * * * *

**Statement E**

## CONFERENCE REPORT ON THE PUBLIC UTILITY ACT OF 1935

"74th Congress, 1st Session" **HOUSE OF REPRESENTATIVES** "Report No. 1903"

### "PUBLIC UTILITY ACT OF 1935

"August 23 (calendar day, August 24), 1935.—
Ordered to be printed.

"Mr. RAYBURN, from the committee on conference, submitted the following

### CONFERENCE REPORT

(To accompany S. 2796)

"The committee of conference on the disagreeing votes of the two Houses on the amendment of the House to the bill (S. 2796) to provide for the control and elimination of public-utility holding companies operating, or marketing securities, in interstate and foreign commerce and through the mails, to regulate the transmission and sale of electric energy in interstate commerce, to amend the Federal Water Power Act, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

"That the Senate recede from its disagreement to the amendment of the House and agree to the same with an amendment as follows:

"In lieu of the matter proposed to be inserted by the House amendment insert the following:

"*That this act may be cited as the 'Public Utility Act of 1935.'*"

* * * * * *

(Page 53):

"*Ascertainment of Cost of Property*

"*Sec. 208. (a). The Commission may investigate and ascertain the actual legitimate cost of the property of*

*every public utility, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation, and the fair value of such property.*

*"(b) Every public utility upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction."*

(Page 34):

"MR. MAPES. Both the Crosser and the Lea bills propose to give the Commission the power to fix a just and reasonable rate for gas.

"What do you consider a just and reasonable rate?

"MR. BOOTH. Well, if you will excuse me, Mr. Mapes, I am merely a lawyer, and the question as to what is a fair and reasonable rate is normally left to experts of a technical character.

"You mean what is the fair and reasonable return upon the investment, or do you mean what is a reasonable, fair, and reasonable wholesale rate?

"MR. MAPES. You are the attorney for the Illinois Public Utility Commission.

"MR. BOOTH. That is correct.

"MR. MAPES. The bills provide that the Commission shall have the authority to fix a just and reasonable rate.

"Does that mean a 5-percent return upon the investment, or a 10- or a 15-percent return?

"MR. BOOTH. Well, that all depends upon the individual circumstance. It will—the Commission will undoubtedly allow a fair return upon the fair value of the property of the pipeline company or a producing company devoted to public service."

* * * * *

(Page 36):

MR. COLE. Your amendment, as proposed to this bill, provides for a temporary rate which is pretty much of a guessing proposition, is it not?

"MR. BOOTH. Oh, no; not at all.

"MR. COLE. Why not?

"MR. BOOTH. As a matter of fact, it is much less of a guessing proposition than the determination of the final rate case as laid down by the decisions of the courts, because that amendment suggests that a temporary rate be fixed upon the original cost less accrued depreciation of the physical property of said company used and usable in the gas service plus a reasonable amount for working capital, * * *.

"* * *

"* * * the fixing of the tentative rate base, which is to be determined on the basis of the original cost, eliminates the guesswork that is usually involved in determination of fair value based upon reproduction cost basis and that is a determination arrived at from the testimony and estimates of engineers. Our courts have held that in the determination of fair value, original cost and reproduction cost is to be considered in arriving at the fair value of the

property of the utility company. The New York Court of Appeals has recently sustained the temporary rate provision just referred to."

* * * * *

(Page 37):

"Mr. Booth. I am suggesting this, that because of the time and the delay which usually occur in determination of a final rate that the Commission arrive at a tentative or temporary rate base by taking one of the factors which the courts have said must be considered, in determining fair value, namely, the original cost, and since the original cost can be determined and should be determined with a high degree of accuracy, and since it will give the utility company or the company that is being regulated, presumably, a return upon the money that actually has been expended in the construction of its property and facilities, there does not seem to me anything highly unfair about that.

"Now, it is true that when the Commission determines the final rate, it will then give consideration both to the original cost, less depreciation, and the reproduction cost, less depreciation, and arrive at the final rate base.

"Mr. Cole. Yes; and those elements which you say the Commission would consider in establishing a final rate, as I understand the law, are required to be taken into consideration.

"Mr. Booth. That is right.

"Mr. Cole. You cannot establish a rate solely on original cost."

* * * * *

(Pages 114-115):

"The Chairman. In brief, how do you fix your temporary rate?

"Mr. Maltbie. The temporary rate is fixed upon the basis, according to the law, of the original cost of the physical properties, less depreciation.

"Now, we make an investigation. In some cases the books of the company show the original cost of the property and we have an order out now which will require all of the utilities outside of the railroads in the State of New

York to produce an inventory and show the original cost of their property before the end of this year.

"So, if the book shows we get original cost from the books. If the books do not show we are allowed to estimate the original cost.

"Also the depreciation, if the books show accrued depreciation, we take that from the books. If we do not think that they do, we can quickly make an estimate or fix the minimum amount that we will deduct and deduct that from the original cost, getting the original cost less depreciation, taking all of the physical property, material, supplies, as well as plant. Then, an analysis of the operating expenses show what the revenue should be and we can fix a rate of return on it and do fix it. So far there has not been a temporary rate fixed on that basis reversed in the State of New York; not one.

"THE CHAIRMAN. In effect you give consideration to every fact that you do in fixing the final rate, but you act hurriedly and save yourselves as to the constitutional question in the final rate where you pay the company any deficiency that may be found due.

"MR. MALTBIE. No, Mr. Chairman; I have not included reproduction cost less depreciation.

"Now, according to the law of the land original cost and reproduction cost less depreciation must be taken off of each one and must be considered. There are a number of other things that might be considered before fixing a final rate, but in a temporary rate we do not need to give any consideration to reproduction cost less depreciation; none at all."

* * * * *

---

Note: The persons participating in the foregoing discussion were:

Mr. Mapes, Congressman Carl E. Mapes, member of the Committee.

Mr. Booth, Harry R. Booth, Acting Counsel for the Illinois Commerce Commission.

Mr. Cole, Congressman William P. Cole, Jr., member of the Committee.

Mr. Maltbie, Milo R. Maltbie, Chairman, Public Service Commission of New York.

The Chairman of the Committee, Congressman Clarence F. Lea.

**STATEMENT BY CONGRESSMAN LEA ON H. R. 6586 IN THE HOUSE OF REPRESENTATIVES, APRIL 28, 1937.**

In the course of the reading of the Natural Gas Act (H. R. 6586, Seventy-Fifth Congress, 1st Session), Congressman Poage offered an amendment to Section 6 requiring the Commission in valuing a natural-gas company's properties for rate case purposes to exclude the value of the properties used for industrial gas, and further providing that it should be conclusively presumed that such property was a percentage of the total property equal to the ratio of the industrial gas to all gas sold by the company. Congressman Lea, Chairman of the House Committee on Interstate and Foreign Commerce, opposing the amendment, said (Congressional Record, Vol. 81, Part 6, p. 6729):

"* * * I think the standard proposed here to cover the action of the committee, in the exercise of its powers, is not authorized by the Constitution.

"* * * I believe under the definition of fair value as defined by the Supreme Court, the amendment would make it the duty of the Commission to do a thing that is not justified by the interpretation of the term 'fair value.' We spent a great deal of time on this section, and we had before us another section, such as the gentleman has here suggested, going into more detail, but, in the meantime, a Supreme Court decision came out that made it very clear we should cut out such details and stay with the safe and unquestionably constitutional provision we have here."

## APPENDIX B.

**Original Cost is a Matter of Actual Expenditures, Not of Bookkeeping, and Where Not Shown by Records is to be Estimated.**

### Treatises.

Spurr, Henry C. *Guiding Principles of Public Service Regulation*, Volume I, pp. 290-299.

"The term 'original cost' has been defined as the sum of money expended for the property in use at the time of the valuation for the benefit of the public. It has been said to be not what the original property cost, but rather what the present property cost."

* * *

"Original cost of construction does not necessarily mean book cost. * * * It means actual bona fide cash cost of existing property.[46] The cost shown by the books sometimes referred to as book value may not fairly represent the amount of the investment because the capital account may be overcharged or the operating account undercharged.[47] In the early days there was no uniform system of accounting and, whereas frequently items were unfairly added to the assets column, to balance the liabilities, on the other hand, items which should properly have been classified as fixed capital expenditures were frequently included in the operating expenses.[48]

* * *

"If for any reason the actual cost cannot be obtained from the books or records, it may be estimated. This estimated cost has been called historical cost, probably because the estimate is based upon a history of prices prevailing at the date of the installation.

---

"[46] *Re Mid-Crosstown R. Co.* (1914) 5 P. S. C. R. (1st Dist N. Y.) 22;
*Re Indianapolis Water Co.* (Ind.) P. U. R. 1917 E, 556."

"[47] *Re Madison City Water Works* (1909) 3 Wis. R. C. R. 299.

"[48] *Re New York State Railways* (N. Y.) P. U. R. 1921 C, 496; *Mairies v. Flatbush Gas Co.* (N. Y.) P. U. R. 1920E, 930."

This would seem to be a proper use of the term, but it has not always been employed in this sense. It has sometimes been considered as synonymous with original cost.

• • •

"The method of estimating original cost is the same as that employed in determining reproduction cost except that in the case of original cost there may be and usually are applied several average unit costs varying in amounts according to the period during which the particular portions of the plant were constructed, whereas, for reproduction cost, there is but one average unit cost applicable to all units of the same kind.[59] In estimating original cost, current prices may be obtained from information gathered from the company's original vouchers and contracts, manufacturers' quotations as of the time when the installations were made, catalogues, market reports, and prices current for similar material in other locations. Labor unit costs may be computed from information gathered from the company's pay roll and rates of pay in effect in other states during the period.[60]"

"Out of the Mail Bag," *Public Utilities Fortnightly*, Vol. 17, No. 4, Feb. 13, 1936, p. 250.

"Standardized definitions of the various kinds of 'cost' should simplify regulatory proceedings. The following suggestions are tendered for consideration:

" 'Original cost' to mean the total outlay of actual dollar costs (or equivalent) of the now existing property, from the date of the initial expenditure to the date of inquiry. This information to be actually obtained from the vouchers, invoices, etc., for the entire period, and applying only to those properties where there are continuous, reliable, accurate, detailed records of construction costs throughout the entire history and bearing no relation to changes in ownership.

---

"[59] *Public Service Commission v. Nevada-California Power Co.* (1913) 3 Ann. Rep. Nev. P. S. C. 261, 276.

"[60] *Re Flint* (Mich.) P. U. R. 1922A, 385, 393."

"'Historical cost' to mean an inventory of the physical property as it actually exists at the date of inquiry, to which is applied the correctly weighted average prices that prevailed during the construction period. This plan may be used where the records of original capital expenditures are not obtainable or where they are so generally inadequate as to be unreliable. Changes in ownership to be given no consideration.

"'Original-historical cost' to mean 'original cost' as first defined above, in so far as dependable construction records are available for a substantial period of time, and for that time in which there is a partial lapse of such records, a list of the now existing property which was constructed during such lapse periods shall be made and correctly weighted average prices of labor and material, etc., effective during such period applied thereto. This also ignores changes in ownership."

Whitten, Robert H. *Valuation of Public Service Corporations. Legal and Economic Phases of Valuation for Rate Making and Public Purchase. Supplement.* (New York: The Banks Law Publishing Co., 1914.) pp. 834-836.

"The term 'actual cost' may possibly be taken in three senses: (1) book cost; (2) the first cost of the original units; (3) the first cost of the identical units now in use. The confusion has arisen from identification of actual cost with book cost or first cost of original units, or both. Properly speaking, actual cost is the first cost of the identical units now in use. In the past both the terms 'actual cost' and 'original cost' have been used, the term 'original cost' being most frequently employed. The term 'actual cost' should be substituted, as the term 'original cost' appears to mean the first cost of the original units.

"Book cost would be the same as actual cost, *i.e.*, the first cost of the identical units now in use, assuming that approval accounting principles had been strictly applied from the initiation of the enterprise. Correct accounting principles are, however, of comparatively recent acceptance and application. Book costs as actu-

ally developed often include discount on securities issued, exorbitant profits to promoters, cost of replacing wornout or superseded property, dividends paid out of capital and money sunk in unsuccessful experiments. On the other hand, book cost may exclude various actual costs, such as improvements and betterments constructed out of earnings and overhead construction charges included in operating expenses.

* * *

"Assuming that existing accounts and records may be only partially relied upon, an estimate of actual cost can be ascertained by much the same methods as and with greater accuracy than an estimate of reproduction cost. The first essential in either case is a complete inventory of property units in use. A second requirement in both cases is the determination of the approximate time at which each such unit was installed. This information is essential under the reproduction method in order to determine the age and accrued depreciation of each unit or class of units. It is essential under the actual cost method in order that unit costs varying with the period of purchase may be applied. Records are available showing for any period the prevailing prices of labor and materials entering into construction costs. From such records, supplemented in many cases by fragmentary data obtainable from the books of the company, it is possible to apply unit costs."

Willard J. Graham and Wilber G. Katz, *Accounting in Law Practice* (Callaghan and Company, Chicago, 1938), p. 228.

"Literally, original cost is the total amount (in dollars) that has been expended by the utility at one time or another in the construction or acquisition of the properties which are at the time of the inquiry included in the rate base as being 'used and useful' in the operation of the business. This amount is readily determinable from the books of account, if they have been properly kept since the founding of the business. In the absence of proper records it is often necessary to substitute an estimate of what the cost of the prop-

erties should have been at the date of their acquisition."

Bemis, Edward W., "Original Cost as the Chief Basis for Fair Value." 1 *Utilities Magazine*, No. 3 (1915) p. 36:

"By original cost in the case of physical assets is meant the actual cost of the property now in use."

Erickson, Halford, "Relation Between the Valuation and the Rate of Return Thereon." *N. A. R. C. Proceedings of 25 Annual Convention*, 1913, p. 435.

"The original cost of the plant and of its business may be defined as the amount of money judiciously expended on the property used and useful in the service and on the development of the business."

Smith, Nelson Lee. *The Fair Rate of Return in Public Utility Regulation.* (Boston and New York: Houghton Mifflin Company, 1932), p. 22.

"The original cost method has been styled 'original cost to date,' 'historical cost,' and 'investment' or 'prudent investment' cost. Although these various terms are not always uniform in meaning, the original cost appraisal yields, not the cumulative costs of superseded as well as existing properties, but, rather, the sums actually paid for the units now in service when those items of property were acquired. But before values are assigned according to either one of these price methods, a physical count, or inventory, of the property must be made."

Hartman, Harleigh H., *Fair Value* (The Meaning and Application of the Term "Fair Valuation" as used by Utility Commissions) (Houghton Mifflin Company, The Riverside Press, Cambridge, 1920) p. 109.

"The campaign to discredit original cost failed because the propaganda could not obscure the fact that such valuation is not dependent upon a complete record, but may be estimated just as reproduction cost is calculated, and with as great or even greater accuracy. Original cost can be figured upon the same inventory as reproduction cost by merely substituting prices of

material and labor, which were current at the time the items inventoried were put into the plant, for the present or normal price used in the reproduction cost appraisal. The original prices may be secured in part from the records of the firm and in part from the market quotations of the period."

**United States Supreme Court.**

*City of Knoxville v. Knoxville Water Company*, 212 U. S. 1.

"When, therefore, a public regulation of its [a utility's] prices comes under question the true value of the property then employed for the purpose of earning a return cannot be enhanced by a consideration of the errors in management which have been committed in the past." (p. 14.)

*Doyle v. Mitchell Brothers' Company*, 247 U. S. 179.

"Nor is the result altered by the mere fact that the increment of value had not been entered upon plaintiff's books of account. Such books are no more than evidential, being neither indispensable nor conclusive. The decision must rest upon the actual facts, which in the present case are not in dispute." (p. 187.)

*Lincoln Gas & Electric Light Company v. City of Lincoln*, 250 U. S. 256.

"Again, we question the propriety of the master's treatment of 'going value,' which he seems to have estimated at less than otherwise he would have placed it upon the theory that the company's business had been developed, at the expense of the public, in the expenditure of past earnings exceeding a fair return upon the capital invested, and this without any finding, or any clear evidence to which our attention has been called, that past earnings were excessive." (p. 267.)

*State of Missouri ex rel. Southwestern Bell Telephone Company v. Public Service Commission of Missouri*, 262 U. S. 276.

(See quotation at pp. 36-37 above.)

*Board of Public Utility Commissioners v. New York Telephone Company*, 271 U. S. 23.

(See quotation at pp. 50-51 above.)

*Columbus Gas & Fuel Co. v. Public Utilities Commission of Ohio*, 292 U. S. 398.

"Leases bought with income, proceeds of the sale of gas, and *thus paid for in the last analysis through the contributions of consumers*, ought not in fairness to be capitalized *until* present or imminent need for use as sources of supply *shall have brought them into the base* upon which profits must be earned." (p. 407)

**Federal.**

*Garden City v. Garden City Telephone, Light & Mfg. Co.*, 236 Fed. 693, P. U. R. 1917B, 779 (C. C. A. 8th, 1916).

The Court rejected the city's claim that the utility was not entitled to a full return upon the present value of its property because it had been paid for from earnings, saying:

"No judicial authorities are cited on this point. In the first place there is no evidence that the company ever charged excessive rates until about the commencement of the controversy out of which this litigation arose; but, if it did so, the various parties from whom they were extorted had a cause of action against the company to recover the excessive rates until the statute of limitations had run. Presumptively they were not the identical persons who are now the consumers from the appellee. It is the practice of courts to try cases one at a time; and if the appellee has put money into the development of the plant, the court in this case could not stop to inquire just how it acquired the title to the money. Such a system would involve an investigation into the wholly collateral matter of the entire past life of litigants and the manner in which they acquired the money invested in a private enterprise." (p. 697.)

*Brooklyn Borough Gas Co. v. Prendergast*, 16 F. (2d) 615, P. U. R. 1927A, 200 (D. C., E. D. N. Y., 1926).

"Book cost in a confiscation rate case is not decisive of value, and quite properly, for it indicates the price of acquisition of property, which is one thing, and not present value, which is quite another thing." (p. 625.)

*City of Minneapolis v. Rand*, 285 Fed. 818, 822-824 (C. C. A. 8th, 1923).

*Monroe Gaslight & Fuel Co. v. Michigan Public Utilities Commission*, 292 Fed. 139, 147, P. U. R. 1923E, 661 (D. C., E. D. Mich., 1923).

*Indiana Bell Telephone Co. v. Public Service Commission of Indiana*, 300 Fed. 190, 197, P. U. R. 1925A, 363 (D. C., D. Ind., 1924).

*Wichita Gas Co. v. Public Service Commission of State of Kansas*, 3 F. Supp. 722, 726 (D. C., D. Kans., 1930), modified and affirmed, 290 U. S. 561.

*Illinois Bell Telephone Co. v. Moynihan*, 38 F. (2d) 77, 86, P. U. R. 1930B, 148 (D. C., N. D., Ill., 1930), reversed, *Smith v. Illinois Bell Telephone Company*, 282 U. S. 133.

*Pacific Gas & Electric Co. v. Railroad Commission of California*, 26 F. Supp. 507, 514, 26 P. U. R. (N. S.) 1 (D. C., N. D. Calif., 1938).

**Interstate Commerce Commission.**

*Texas Midland Railroad*, 75 I. C. C. 1 (1918).

In determining the $2,892,361 "original cost" or "investment" as evidence of fair value, the Commission included substantial sums which had originally been charged to expense or to income. The Commission explained the method followed by its staff as follows:

"When the bureau realized that it was impossible to obtain accurate information from the books of the com-

pany concerning original cost to date, it reconstructed the accounts upon what it believed to be a proper basis. To accomplish this it was necessary to examine every voucher which had been issued by the carrier for the payment of money since 1893, the date when its operations began." (p. 10.)

"It became evident that the investment account of this carrier had not been correctly kept and an attempt was made to restate that account in accordance with our accounting rules now in force. For this purpose the entire books of the Texas Midland Railroad were in effect rewritten, every voucher being examined and reassigned as far as possible." (p. 98.)

*Elgin, Joliet & Eastern Railway Company*, 84 I. C. C. 587, 592 (1924).

*New York, Philadelphia and Norfolk Railroad Company*, 97 I. C. C. 273 (1925).

"The question to be determined is whether the voluntary act of the carrier in charging only a portion of the cost of road and equipment to its investment account estops it from thereafter claiming as investment the additional cost not charged out properly in the first instance. Under the mandate of the statute we are required to find the value of the property of the carrier. The investment account, when properly stated, constitutes evidence of value to which consideration must be given. In this case the investment in property being devoted to carrier purposes on valuation date is incompletely stated in that costs incurred therefor were entered as charges to income. If our present system of accounting had been in force when the entries were made the investment account would have included the amount here claimed as proper.

"In previous cases instances have been found where the investment account has been incorrectly kept, capital expenditures being recorded in operating expenses or as charges to income. In order to obtain an accurate statement of investment it has been necessary in such instances to reconstruct the accounts. Here the carrier has presented evidence of costs that have not been in-

cluded in our restated investment figure, although the property was found in ownership and use on date of valuation, was inventoried and is included in our estimates of cost of reproduction new and less depreciation. The evidence is persuasive that the investment figure should be increased by the amount of $733,846.13 and our tentative report will be revised accordingly. * * *" (p. 279.)

*Hamilton Belt Railway Company*, 149 I. C. C. 126 (1928).

*Depreciation Charges of Telephone and Steam Railroad Companies*, 177 I. C. C. 351, 407 (1931).

**California.**

*Re Los Angeles Gas & Electric Corporation*, P. U. R. 1917 F, 717 (Calif. R. R. Comm., 1917).

"In arriving at the sum upon which to calculate the fair return to the company, I have used an estimate of original cost of the entire plant which is now found in use, and have not depreciated this cost. In other words, I have concluded that the just and reasonable thing to do in this proceeding is to allow the company a return upon its actual investment in this property. This includes money invested regardless of the source from which such money came. For instance, no deduction has been made because a part of the depreciation reserve has been invested in plant, nor has any deduction been made because a part of the earnings of the company in times past have been invested in plant.

"Reinvested earnings are legally as much a part of the stockholders' equity in the property as is the property represented by a direct investment by the stockholders." (pp. 722-723)

*Re City of Los Angeles*, P. U. R. 1916F, 593, 601 (Calif. R. R. Comm., 1916).

**Colorado.**

*Re Mountain States Telephone & Telegraph Company*, P. U. R. 1917B, 198 (Colo. P. U. C., 1917).

"The experience of this Commission discloses that book values of public utilities are of very little assistance in obtaining fair value for rate-making purposes. The methods adopted by the various public utilities in building book values are not uniform, and the accounting methods in the past have been far from uniform, as no regulatory boards were in existence to prescribe the methods of accounting, from which book values could be ascertained. Some public utilities build up enormous book values based on many erroneous assumptions; other utilities—of which class the present utility is one—have not taken into consideration proper methods in building up an adequate book value, as has been disclosed from the testimony in this case." (pp. 286-287)

**District of Columbia.**

*Re Washington Gas-Light Company*, 11 P. U. R. (N. S.) 119 (D. C. P. U. C., 1935).

**Idaho.**

*Boise Artesian Water Co. v. Public Utilities Commission*, 236 Pac. 525, P. U. R. 1926A, 195 (Idaho, 1925).

The Commission excluded overheads from the rate base because there was no evidence that they had actually been expended. The Court reversed, saying:

"The value of a property is not necessarily its cost. Even though constructed economically, the construction cost is a mere evidence of value. The fact, even if it be admitted, that the system was largely built from profits, would not deprive the owner of his right to have the property given its present fair value. And ordinarily, even though the system was built up gradually and out of the profits of the company, and conceding that there is no evidence that any sum was ever actually expended for overheads, we do know that there is a value in the completed property in addition to the mere

naked cost of labor and materials necessarily used in its construction." (pp. 529-530)

**Illinois.**

*Illinois Commerce Commission v. Chicago Telephone Company*, P. U. R. 1924A, 213 (Ill. C. C. 1923).

In holding that original cost could not be ascertained entirely from a consideration of book value, the Commission said:

"Furthermore, it appears that the book value now includes some overhead charges but that others have not been properly charged thereto. There is evidence of record to indicate that some costs of an overhead nature have previously been charged to operating accounts instead of to plant account. While this is an erroneous procedure it does not warrant the Commission in eliminating them from consideration when finding the original cost of the existing property." (p. 226)

**Indiana.**

*Re Indianapolis Water Company*, P. U. R. 1917E, 556, 612 (Ind. P. S. C. 1917).

**Maine.**

*Rich v. Biddeford & Saco Water Company*, P. U. R. 1917C, 982, 999 (Me. P. U. C. 1917).

**Missouri.**

*City of Jefferson v. Capital City Water Company*, 27 P. U. R. (N. S.) 69 (Mo. P. S. C. 1938).

"The city objects to the inclusion of this item [construction overheads] in the estimated original cost on the ground that it was not an actual or recorded cost item, and if it had been incurred, it had previously been charged to operating expenses."

"(1) We are endeavoring to arrive at a proper amount for the estimated original cost of the property as one of the elements to be considered in arriving at present fair value. This being true, the disposition of costs in the accounts of the company are immaterial. If the en-

tire costs of the property had been charged to operating expenses, we would still be obliged, to arrive at a figure for the estimated original cost." (p. 74)

## New York.

*People ex rel. New York State Rys. v. Public Service Commission*, 202 App. Div. 576, 195 N. Y. Supp. 174, P. U. R. 1922E, 675 (3d Dept. 1922).

"With the exception above noted, the commission disallowed these items [overheads], because:

'Otherwise it would be necessary to revise the operating expense accounts by excluding a portion of the salaries of the officials concerned, and such revision would produce larger net earnings.'

"The 'larger net earnings' thus produced would relate to the period when the particular portion of the road under consideration was being organized, constructed, and developed, and would in no way affect present net earnings. It has been held that past losses are not to be considered in determining the rate base and whether the present rate is confiscatory.' *Galveston Electric Co. v. City of Galveston*, 257 U. S. . . ., 42 Sup. Ct. 351, 66 L. Ed. . . . (decided April 10, 1922); *City of Knoxville v. Knoxville Water Co.*, 212 U. S. 1, 14, 29 Sup. Ct. 148, 53 L. Ed. 371. It would seem to follow as a necessary corollary that, if past losses may not be considered in fixing a rate base, neither should past profits be so considered, nor what would have been past profits or 'larger net earnings' by a readjustment of operating expenses.

"We think, therefore, the commission has proceeded on an erroneous principle in excluding these overhead expenses." (p. 176)

*Village of Wellsville v. Maltbie*, 257 App. Div. 746, 15 N. Y. Supp. (2d) 580, 32 P. U. R. (N. S.) 436 (3d Dept., 1939).

*Village of Boonville v. Maltbie*, 245 App. Div. 468, 283 N. Y. Supp. 460, 466-467, 14 P. U. R. (N. S.) 93 (3d Dept. 1935), affirmed 4 N. E. (2d) 209 (N. Y., 1936).

*New Rochelle Water Co. v. Maltbie*, 248 App. Div. 66, 289 N. Y. Supp. 388, 397, 15 P. U. R. (N. S.) 32 (3d Dept. 1936).

**Pennsylvania.**

*City of Erie v. Public Service Commission*, 123 Atl. 471, P. U. R. 1924D, 89 (Pa. 1924).

"Time has usually wiped out much of the evidence to show original cost. The records then kept did not account for all the various items entering into it, nor do the books of today, though kept with meticulous care, exactly cover such items. As stated by Mr. Justice Brandeis in his concurrence in the *Southwestern Bell Case*, wherein the present value method is assailed in what may be termed the last word on the subject:

" 'Ordinarily, stocks and bonds did not indicate the amount of capital embarked in the enterprise. Depreciation accounts were unknown, and * * * book values or property accounts furnished no trustworthy evidence either of cost or of real value.'

"It is here that a part of the difficulty is met, if original cost were adopted as the rule of value. * * *." (p. 475)

*Borough of Verona v. Suburban Water Company*, P. U. R. 1920F, 942 (Pa. P. S. C., 1920).

"Original cost, one of the elements to be considered by the Commission in determining fair value, is the actual cost of the property. Historical cost may be defined to be the cost ascertained by applying to the property of the company the prices prevailing at the time the plant was constructed or property acquired. It is only ascertained when original cost is not available. Historical cost, therefore, may be more or less than original cost and neither should be confused with fair value, as they are only elements ascertainable in the manner indicated, to be considered by the Commission in reaching its determination. The cost submitted to the Commission in this case was original cost, so far as it was obtainable from the books of the company, and where original cost could not be obtained it was supplemented

by historical cost. It is, therefore, a combination of the two. Book value is that which is placed upon the property of the company for accounting purposes. It may be the same or more or less than original or historical cost." (p. 945)

*Re Philadelphia Rapid Transit Company*, 26 P. U. R. (N. S.) 65, 105 (Pa. P. U. C., 1938).

**Wisconsin.**

*Re City of Milwaukee*, P. U. R. 1927B, 229, 244 (Wis. R. R. C., 1926).

## APPENDIX C.

**Analysis of Cases Cited in Commission's Brief (Pages 79-82) Said to "Prohibit Reaccounting and Support the Principles Employed by the Commission" in Determining "Original Cost."**

The only three federal cases cited on this point in the Commission's brief not merely for comparison ("Cf.") are the decision of the Supreme Court in the *Natural Gas Pipeline* case, the decision of the District Court in the *Los Angeles Gas & Electric* case, and the decision of the Circuit Court of Appeals for the Ninth Circuit in the *Northwestern Electric* case. As to these three cases we note the following:

1. *Federal Power Commission v. Natural Gas Pipeline Company*, 315 U. S. 575. Here the rate base actually used by the Commission was the reproduction cost new of all of the utility's physical properties, plus the present value of its gas reserves, its estimated capital additions, and working capital (315 U. S., 586-587). The discussion at page 590, specifically referred to in the Commission's brief, deals with the claim for $8,500,000 for going concern value as a separate allowance. There was no exclusion from the rate base in this case of any part of the cost or value of any items of physical property by reason of the past accounting practices of the utility. In excluding a separate allowance for going concern value, the Court pointed out that the only items excluded were "expenditures for securing new business" and costs of carrying "non-productive capacity" (315 U. S., 588).

2. *Los Angeles Gas & Electric Corp. v. Railroad Commission*, 58 F. (2d) 256, (D. Ct., S. D. Calif. 1932). This is the case that ultimately reached the Supreme Court in *Los Angeles Gas & Electric Corp. v. Railroad Commission of California*, 289 U. S. 287. The rate base found non-confiscatory by the Supreme Court was one of $65,500,000,

undepreciated, "on the basis of fair value." This was almost $5,000,000 in excess of historical cost (289 U. S., 310). The views of the California Commission and the District Court as to whether overheads in excess of those actually capitalized should under the particular circumstances of that case be included in the historical cost, the Supreme Court did not pass upon, pointing out that even if the $2,000,000 claimed by the utility had been added to the historical cost allowed by the Commission the result would still be substantially below the Commission's "fair value" rate base (289 U. S., 309-310).

The decision of the District Court that there should not be included in historical cost larger overheads than the utility had capitalized was based upon the principles of estoppel. In the initial valuation proceeding for this company in 1917, *Los Angeles Gas & Electric Corp.*, P. U. R. 1917 F, 717 (1917), the California Commission capitalized and included in the rate base overheads at approximately the 24.27% claimed by the company fifteen years later in the rate proceeding which finally reached the Supreme Court (P. U. R. 1931A, 132 (1930); P. U. R. 1933E, 317 (1933)). Thus, to use its own language, the Commission apprised the company that it could capitalize overheads at a substantial figure, even though part of them had been carried as operating expenses. The company, however, rejected the Commission's suggestion, and continued to capitalize overheads at slightly less than 6%, charging the balance to operating expenses. In this manner the company over a period of some fifteen years after the initial valuation and *in a succession of almost biennial rate hearings obtained increased rates on the basis of the operating expenses shown by its books, including the overheads* which the Commission had originally suggested that it might capitalize. Thus the company was actually *allowed* increased rates to take care of the enhanced operating expenses due to the overhead items it later sought to capitalize.

3. *Northwestern Electric Co. v. Federal Power Commission*, 125 F. (2d) 882 (C. C. A. 9th, 1942). This is a pure accounting case. The Federal Power Commission had ordered the utility not to place certain interest during construction in its capital accounts on its books, and the court held that the Commission was within its jurisdiction in requiring it so to account. The court was careful to point out (at p. 886) that "the system of accounts takes nothing from petitioner."

The two federal cases marked "Cf." in the Commission's brief are not relevant. *Helvering v. Wilshire Oil Company*, 308 U. S. 90, at pages 95, 97, was an income tax case in which the taxpayer sought both to deduct development costs from gross revenues in order to determine taxable net income and not to deduct them for the purpose of computing the depletion allowances. *Chicago & N. W. R. Co. v. Commissioner*, 114 F. (2d) 882, 886 (C. C. A. 7th, 1940), was also an income tax case, involving the right of the taxpayer to shift from the retirement to the straight line method of computing depreciation without complying with relevant regulations.

As to the two state court cases cited we note the following:

1. *Peoples Gas Light & Coke Company v. Slattery*, 373 Ill. 31, 25 N. E. (2d) 482, 493 (1940), app. dism. 309 U. S. 634, was a case in which the commission and court approved a rate base of $120,000,000 as against the historical cost (undepreciated) of the property as claimed by the company of $111,000,000. The case furthermore involves the application of the principle of estoppel since the utility had long been under regulation and had obtained higher rates by reason of the increased operating expenses due to the inclusion of the overheads which the company sought to capitalize.

2. *Natural Gas Company of West Virginia v. Public Service Commission*, 95 W. Va. 557, 121 S. E. 716 (1924). In this case the court disapproved the inclusion in the rate base of overheads and well drilling costs formerly charged to operations by means of which the company had obtained higher rates from the state commission. The court expressly approved the fair value rule for the fixing of a rate base and remanded the case to the Commission for its failure to give proper consideration to reproduction cost. In order to test the company's claim of confiscation, the court reconstructed a hypothetical rate base in which it added 52% to the historical cost of the company's property to determine its current fair value. The company claimed an allowance of 18% for overheads which the court found was not supported by the facts; but the court directed the commission on remand to make proper allowance for overhead costs.

In addition to the foregoing federal and state court cases the Commission's brief cites decisions by various commissions. Only three of these are by federal commissions. Two are the Federal Power Commission's own decisions. The *Canadian River Gas* case (43 P. U. R. (N. S.) 205 (1942)) is a rate case decided by the Commission shortly before the *Hope* case, and it applied exactly the same theories being tested here, but to a new property. The *Northwestern Electric* case (36 P. U. R. (N. S.) 202 (1940)), reviewed by the Circuit Court of Appeals in the opinion previously discussed, is a case involving the Commission's application to purely accounting problems of its own interpretation of its system of accounts.

In addition the decision of the Interstate Commerce Commission in the *Elgin, Joliet & Eastern Railway Company* case is cited (84 I. C. C. 587 (1924)). What this case actually holds is that capital costs formerly charged to operating expenses, when properly identifiable, should be transferred to capital account for the purpose of determin-

ing the actual original cost of a railroad property. As we noted in Appendix B at pages 166 to 168 above the Interstate Commerce Commission has uniformly taken this position and as the oldest federal regulatory body its interpretation of what is meant by the term "original cost" is of controlling significance.

The balance of the cases cited in the Commission's brief are all State commission cases which fall into one or more of the following general classes:

**1. Cases where the rate base fixed was present fair value, substantially in excess of the depreciated original or historical cost of the property.**

*California:*

*San Francisco v. Pacific Gas & E. Co.*, P. U. R. 1918A, 506 (1917) also cited in classes 2 and 4.

*District of Columbia:*

*Re Potomac Electric Power Co.*, P. U. R. 1917D, 563 (1917) also cited in class 2.

*Hawaii:*

*Re Hawaiian Electric Co. Ltd.*, 33 P. U. R. (N. S.) 161 (1940).

*Illinois:*

*Illinois Commerce Comm. v. Pub. Serv. Co.*, 4 P. U. R. (N. S.) 1 (1934) also cited in class 2.

*Illinois Commerce Commission v. Commonwealth Edison Co.*, 15 P. U. R. (N. S.) 404 (1936) also cited in class 2.

*Indiana:*

*Re Indianapolis Water Co.*, P. U. R. 1919A, 448 (1918).

*Michigan:*

*Re Eaton Rapids*, P. U. R. 1922D, 94 (1922).

*Missouri:*

*Re West St. Louis Water & Light Co.*, P. U. R. 1922E, 805 (1922) also cited in class 3.

*Aluminum Goods Mfg. Co. v. Laclede Gas Light Co.*, P. U. R. 1927B, 1 (1926) also cited in class 4.

*New York:*

*Re Brooklyn Borough Gas Co.*, 21 P. U. R. (N. S.) 353 (1937) also cited in classes 2 and 3.

*Herman v. Newtown Gas Co.*, P. U. R. 1916D, 825 (1916).

*Maires v. Flatbush Gas Co.*, P. U. R. 1920E, 930 (1918) also cited in class 2.

*Moritz v. Edison Electric Illum. Co.*, P. U. R. 1917A, 364 (1916) also cited in class 2.

*Pennsylvania:*

*Public Utility Comm. v. Duquesne Light Co.*, 20 P. U. R. (N. S.) 1 (1937).

*West Virginia:*

*Re Clarksburg Light & Heat Co.*, P. U. R. 1928B, 290 (1927) also cited in class 2.

*Re West Virginia Central Gas Co.*, P. U. R. 1924E, 24.

*Re West Virginia Central Gas Co.*, P. U. R. 1918C, 453 also cited in class 3.

*Re Clarksburg Light & Heat Co.*, P. U. R. 1917A, 577 (1916) also cited in class 4.

*Wisconsin:*

*Re Reedsburg Telephone Company*, 7 P. U. R. (N. S.) 389 (1934).

**2. Estoppel cases where the circumstances were similar to those in the Los Angeles case.**

*California:*

*San Francisco v. Pacific Gas & E. Co.*, P. U. R. 1918A, 506 (1917) (Municipal Regulation) also cited in classes 1 and 4.

*Re Los Angeles Gas & Electric Corp.*, P. U. R. 1931A, 132 (1930) (Commission decision under review in *Los Angeles* case above. Commission included interest during construction not previously capitalized).

*Re Los Angeles Gas & Electric Corp.*, P. U. R. 1933E, 317 (1933) (Accounting case).

*District of Columbia:*

*Re Potomac Electric Power Co.*, P. U. R. 1917D, 563 (1917) (Congressional Regulation) also cited in class 1.

*Illinois:*

*Illinois Commerce Comm. v. Pub. Serv. Comm.*, 4 P. U. R. (N. S.) 1 (1934) also cited in class 1.

*Illinois Commerce Comm. v. Commonwealth Edison Co.*, 15 P. U. R. (N. S.) 404 (1936) also cited in class 1.

*New York:*

*Moritz v. Edison Electric Illum. Co.*, P. U. R. 1917A, 364 (1917) also cited in class 1.

*Mairs v. Flatbush Gas Co.*, P. U. R. 1920E, 930 (1918) also cited in class 1.

*Re New York State Railways*, P. U. R. 1922B, 75 (1921).

*Re Westchester Lighting Company*, 15 P. U. R. (N. S.) 299 (1936).

*Re Brooklyn Borough Gas Co.*, 21 P. U. R. (N. S.) 353 (1937) also cited in classes 1 and 3.

*Pennsylvania:*

*Public Utility Com. v. Peoples Natural Gas Co.*, 43 P. U. R. (N. S.) 82 (1942).

*West Virginia:*

*Re Clarksburg Light & Heat Co.*, P. U. R. 1928B, 290 (1927). (Where well drilling costs were being charged to expense, Commission said they "should not be included in the present valuation of its property, *provided the same policy of accounting is continued*," p. 297) also cited in class 1.

*Wisconsin:*

*Re Mondovi Telephone Co.*, P. U. R. 1933B, 319 (1932); P. U. R. 1933D, 142 (1932).

**3. Cases where the items excluded from the rate base comprised for the most part intangible overheads and not direct property costs and the claims for such overheads were wholly unsupported by the facts:**

*Missouri:*

*Re West St. Louis Water & Light Co.*, P. U. R. 1922E, 805 (1922) (Contractor's fee) also cited in class 1.

*New York:*

*Re Brooklyn Borough Gas Co.*, 21 P. U. R. (N. S.) 353 (1937) also cited in classes 1 and 2.

*West Virginia:*

*Re West Virginia Central Gas Co.*, P. U. R. 1918C, 453 (1918) (20%) also cited in class 1.

**4. Cases where the items excluded from the rate base were not proper capital costs but were regarded as current operating expenses:**

*California:*

*San Francisco v. Pacific Gas & E. Co.*, P. U. R. 1918A, 506 (1917) (expense involved in location of street lamps) also cited in classes 1 and 2.

*Colorado:*

*Re Leadville Water Co.*, P. U. R. 1921D, 172 (1921).

*Idaho:*

*Re Kootenai Power Co.*, P. U. R. 1924E, 831 (1924) (Donations, advertising, etc.).

*Missouri:*

*Aluminum Goods Mfg. Co. v. Laclede Gas Light Co.*, P. U. R. 1927B, 1 (1926) (Cost of records) also cited in class 1.

*Montana:*

*Public Service Commission v. Montana Petroleum Company*, P. U. R. 1924B, 364 (1923).

*West Virginia:*

*Re Clarksburg Light & Heat Co.*, P. U. R. 1917A, 577 (1916) (Drilling costs excluded because treated as operating expenses by Commission for future) also cited in class 1.

The only case cited by the Commission which is not included in any of the foregoing categories is *Re Central Maine Power Co.*, P. U. R. 1918C, 792 (1918), which was not a rate case at all but involved simply the authorization of the issuance of securities.

As a matter of fact, many of the cases cited by the Commission expressly permit the inclusion of overheads not previously carried in capital account or expressly approve the inclusion in the rate base of property purchased from income, including the following cases:

*California:*

*San Francisco v. Pacific Gas & E. Co.*, P. U. R. 1918A, 506 (1917) (10% for overheads; see also page 519).

*Michigan:*

*Re Eaton Rapids*, P. U. R. 1922D, 94 (1922) ($31,000 acquired from profits as against $185,000 rate base).

*Missouri:*

*Aluminum Goods Manufacturing Company v. Laclede Gas Light Co.*, P. U. R. 1927B, 1 (1926) (15% for overheads and also donated property included).

*Montana:*

*Public Service Commission v. Montana Petroleum Company*, P. U. R. 1924B, 364 (1923) (20% for overheads).

*West Virginia:*

*Re West Virginia Central Gas Co.*, P. U. R. 1918C, 453 (1918).

*Re West Virginia Central Gas Co.*, P. U. R. 1924E, 24 (1924).

# APPENDIX D.

## HOPE NATURAL GAS COMPANY

### "Direct Costs of Production of Gas (Exclusive of Return) and Increment of Direct Costs Year 1940 Over 1939."

*[Copy of Table 12 of Cleveland Reply Brief before the Commission (p. 104)]*

| | Exhibit 67, 1939 | Exhibit 78, 1940 | Increment Costs—1940 over 1939 |
|---|---|---|---|
| Expenses of Producing Gas, Excl. of eciation and Depletion (Ex. 67, pp. 17, Ex. 78, pp. 17, 23) | | | |
| 4.1 Gas Well Labor | $ 330,338.52 | $ 347,147.21 | |
| 5.1 Gas Well Supplies and Expenses | 150,999.56 | 164,662.01 | |

| 35.1 Gas Well Supplies and Expenses | .79 | .61 | |
| 41 Maint. of Prod. Gas Well Equip. | .32 | .31 | |
| 45 Gas Well Royalties | 5.01 | 3.31 | |
| Total Direct Gas Well Expenses | 8.12 | 5.52 | |
| Gross Production Tax | .87 | .83 | |
| Total, Incl. Production Tax | 8.99¢ | 6.35¢ | |
| reciation and Depletion per M.c.f. Pro ced: | | | |
| Depletion | 1.75¢ | 1.68¢ | |
| Depreciation of Gas Well Equipment | 1.14 | .70 | |
| Total Depreciation and Depletion | 2.89¢ | 2.38¢ | |
| al Direct Costs of Producing Gas, Incl. epreciation and Depletion: | | | |
| Amount | $1,966,105.10 | $2,338,940.06 | $372,834.96 |
| Per M.c.f. Produced | 11.88¢ | 8.73¢ | 3.64¢ |

# APPENDIX E.

## HOPE NATURAL GAS COMPANY.

### Indicated Rate Reduction Based on Findings of the Commission for the Year 1940 and Reported Changes in Plant, Revenues, and Expenses to December 31, 1942.

### (Excluding former Reserve Gas Company Operations)

| | 1940 per Commission Findings (R. I, 12) | Increase on Commission's Method | 1942 | Less former Reserve Gas Company (Ex. 77) | 1942 excluding former Reserve Gas Company |
|---|---|---|---|---|---|
| | (1) | (2) | (3) | (4) | (5) |
| Operating Revenues from Interstate Sales | $19,296,755 | $5,933,028 | $25,229,783 | $1,210,973 | $24,018,810 |
| Operating Deductions: | | | | | |
| Operating Expenses except Federal Income Tax | 12,997,845 | 4,452,813 | 17,450,658 | 716,942 | 16,733,716 |
| Federal Income Tax | 912,313 | 1,627,704 | 2,540,017 | 71,207 | 2,468,810 |
| Total | $13,910,158 | $6,080,517 | $19,990,675 | $ 788,149 | $19,202,526 |
| Net Operating Revenues from Interstate Sales | 5,386,597 | (147,489) | 5,239,108 | 422,824 | 4,816,284 |
| Return at 6½% | 2,088,756 | 231,976 | 2,320,732 | (Note A) | 2,320,732 |
| Excess Earnings before Income Tax Saving | 3,297,841 | (379,465) | 2,918,376 | — | 2,495,552 |
| Income Tax Savings | 912,313 | 1,033,271 | 1,945,584 | — | 1,663,701 |
| Total Indicated Rate Reduction | $ 4,210,154 | $ 653,806 | $ 4,863,960 | — | $ 4,159,253 |

NOTE A: No adjustment of the 1942 return computed by the Commission's brief is made since there is no way of determining what if any amount is included therein on account of the Reserve Gas Company's properties. The $3,377,171 net addition to the average 1938-1939 rate base used by the Commission's brief in computing the return would include at the most the very low net book cost of the Reserve properties, a 6½% return on which would be less than $150,000.

( ) Parentheses denote losses.

| XII. | Hope's Fixed Assets, Total Sales and Revenues, Depreciation and Net Operating Gas Income Per Books—1926-1940. |

**SCHEDULE I**

## HOPE NATURAL GAS COMPANY

### Annual Gas Sales—M.c.f.

| | 1937 | 1938 | 1939 | 1940* |
|---|---|---|---|---|
| Total Local Sales of Gas in West Virginia | 11,428,353 | 8,632,673 | 9,732,983 | 11,320,325 |
| Export Gas Sales: | | | | |
| To East Ohio | 35,074,416 | 30,316,773 | 33,907,672 | 40,376,091 |
| To Peoples | 3,506,013 | 2,870,545 | 3,864,104 | 9,738,612 |
| To River | 330,644 | 222,615 | 237,640 | 391,859 |
| To Fayette | 849,305 | 837,986 | 840,398 | 859,106 |
| To Manufacturers | 4,523,967 | 3,995,563 | 2,500,755 | 2,241,684 |
| Total Export Gas Sales | 44,284,345 | 38,243,482 | 41,350,569 | 53,607,352 |
| Total Gas Sales | 55,712,698 | 46,876,155 | 51,083,552 | 64,927,677 |

* Excluding per stipulation (Ex. 77) sales from former Reserve Gas Company properties merged with Hope on December 30, 1939.

*(From Hope Brief, p. 4)*

SCHEDULE II

## HOPE NATURAL GAS COMPANY

**Comparison of Net Returns from Interstate Business, 1937-1940, Based on Hope's and Commission Staff's Claims as to Operating Expenses**

| | Hope | Commission Staff |
|---|---|---|
| 1937 | $2,587,901 | $3,244,904 |
| 1938 | 730,529 | 1,186,435 |
| 1939 | 2,174,361 | 3,020,246 |
| 1940 | 4,574,804 | 5,576,982 |
| 3-Year Average—1937 to 1939 | 1,830,930 | 2,483,862 |
| 4-Year Average—1937 to 1940 | 2,516,899 | 3,257,142 |

*(From Hope Brief, p. 116; Hope figures from Ex. 133, p. 1)*

**Net Returns from Interstate Business on Commission Basis if Rates Fixed by It for the Future Had Been in Effect in the Years 1937 to 1939**

| | Net Interstate Operating Income |
|---|---|
| 1937 | $ 708,653 |
| 1938 | (1,394,164) Loss |
| 1939 | 333,502 |
| 3-Year Average | $ (117,336) Loss |

*(From Hope Brief, p. 123)*

**SCHEDULE III**

## HOPE NATURAL GAS COMPANY

### Rate Bases Found by the Commission

| | December 31, 1938 | December 31, 1940 |
|---|---|---|
| | (1) | (2) |
| "Gross Investment in Gas Plant in Service" (including all leaseholds) | $51,792,000 | $52,523,000 |
| Less: "Actual Existing Depletion and Depreciation" | 21,188,000 | 22,328,000 |
| "Net Investment" | $30,604,000 | $30,195,000 |
| Add: "Working Capital" | 2,100,000 | 2,125,000 |
| "Interstate Rate Base" | $32,704,000 | $32,320,000 |
| Add: "Net Capital Additions, 1941, 1942, 1943" | | 1,392,000 |
| Total Future Rate Base | | $33,712,000 |

*(From Hope Brief, p. 28; also Opinion, R. I, p. 50)*

SCHEDULE IV

## HOPE NATURAL GAS COMPANY

**Original Cost—Difference Between Hope's Evidence and Commission's Findings as of December 31, 1938**

| | | |
|---|---|---|
| Hope's Evidence as to Original Cost | | $69,735,000 |
| Commission's Adjusted Book Cost | | 51,792,000 |
| Difference | | $17,943,000 |
| This difference is due to the omission from the Commission's Adjusted Book Cost of the following principal classes of items: | | |
| Drilling and other direct well construction costs for 2633 wells | $12,643,641 | |
| Other direct material and labor costs of buildings, pipe lines and other miscellaneous property | 1,380,154 | |
| Field and general overheads, including interest during construction | 3,825,126 | |
| | $17,848,921 | |

*(From Hope Brief, pp. 28-29, 33)*

SCHEDULE V

## HOPE NATURAL GAS COMPANY

### "The Leasehold Costs of Natural Gas Produced

| | Method of Handling The Exploration And Development Costs | |
|---|---|---|
| | Industry Practice Of Charging To Expense | Capitalization Method Used in This Exhibit |
| | (1) | (2) |
| **"Depreciated Costs as of December 31, 1938 for Inclusion in Rate Base** | | |
| Operated acreage—acquisition cost | $ 482,311 | $ 482,311 |
| Net remainder of accumulated exploration and development costs | — | 5,331,236 |
| Unoperated acreage—acquisition cost | 681,882 | — |
| Total for rate base | $1,164,193 | $5,813,547 |
| **"Average 1937, 1938 and 1939 Exploration and Development Costs** | | |
| Delay rentals | $ 450,981 | $ — |
| Loss on unoperated leases cancelled | 49,543 | — |
| Non-productive drilling costs | 53,037 | — |
| Depletion of operated acreage @ 4.77 per cent | 23,006 | 23,006 |
| Depletion of exploration and development costs @ 4.77 per cent | — | 254,300 |
| Return on rate base at 8 per cent | 93,135 | 465,084 |
| Total | $ 669,702 | $ 742,390" |
| With return on rate base at 6½ per cent the total figures become | $ 652,240 | $ 655,187 |

*(Copy of Table on p. 11 of Rhodes' Ex. 26; "The Leasehold Costs of Natural Gas Produced," with last line from Hope Brief, footnote p. 45)*

SCHEDULE VI

## HOPE NATURAL GAS COMPANY

### Original Cost and Original Cost Trended to 1938 Prices of Hope's Production, Transmission and General Properties Existing at December 31, 1938

| Year First Placed in Public Service | Original Cost | Original Cost Trended To 1938 Prices |
|---|---|---|
| (1) | (2) | (3) |
| 1891 | $ 9,732 | $ 30,400 |
| 1892 | 203,822 | 487,857 |
| 1893 | 52,126 | 135,566 |

**SCHEDULE VII**

## HOPE NATURAL GAS COMPANY

**Summary of Evidence of Interstate Rate Base—Before Depreciation**
**As of December 31, 1938**

*(Exclusive of Working Capital and Capital Additions)*

| | |
|---|---|
| **Hope Evidence** | |
| 1. Book Cost | $ 52,730,000 |
| 2. Original Cost | 69,735,000 |
| 3. Original Cost at 1917-1938 prices | 90,000,000 |
| 4. Original Cost Trended to 1938 prices | 105,101,000 |
| 5. Reproduction Cost New: | |
| (a) Ohio Commission—6/30/37 | 100,257,000 |
| (b) Hope—12/31/38 | 97,340,000 |
| **Commission Staff Evidence** | |
| Staff's Adjusted Book Cost | $ 51,792,000 |

*(From Hope Brief, p. 29)*

SCHEDULE VIII

## HOPE NATURAL GAS COMPANY

### Investors' Appraisal of Capital Risk in Various Divisions of the Utility Business

| | 1937 | 1938 | 1939 | 1940 | Four Year Average 1937-1940 |
|---|---|---|---|---|---|
| | (1) | (2) | (3) | (4) | (5) |
| Electric Utility Operating Companies | 5.47% | 5.50% | 5.41% | 5.34% | 5.45% |
| Water Companies | 5.52 | 5.39 | 5.66 | 5.23 | 5.45 |
| Manufactured and Mixed Gas Companies | 6.17 | 6.61 | 6.61 | 6.88 | 6.57 |
| Natural Gas Companies | 7.91 | 7.79 | 7.53 | 7.97 | 7.80 |
| Natural Gas Companies excluding Pacific Lighting Corporation | 8.32 | 8.05 | 8.32 | 9.34 | 8.51 |

*(From Hope Brief, footnote, p. 107)*

**SCHEDULE IX**

## HOPE NATURAL GAS COMPANY

### Hope's Interstate Rate Base for Future Rates Using California Method of an Undepreciated Rate Base

a) **Using Commission's Adjusted Book Cost as Original Cost:**

| | |
|---|---|
| Physical Properties and Operated Leaseholds | $51,957,416 |
| Useful Unoperated Leaseholds | 566,105 |
| Working Capital | 2,125,000 |
| Net Capital Additions | 1,392,021 |
| Total | $56,040,542 |

b) **Using Hope's Determination of Original Cost:**

| | |
|---|---|
| Original Cost* | $70,593,000 |
| Working Capital | 2,125,000 |
| Net Capital Additions | 1,392,000 |
| Total | $74,110,000 |

**Commission's Allowances in Future Rates:**

| | |
|---|---|
| For Return | $ 2,191,314 |
| For Depreciation and Depletion | $ 1,460,037 |
| Total | $ 3,651,351 |

* Hope's original cost of physical properties and leaseholds as of December 31, 1938 plus 1939 and 1940 net additions as found by the Commission (R. I, 36).

*(From Hope Brief, pp. 114, 113)*

**SCHEDULE X**

## HOPE NATURAL GAS COMPANY

### "Direct Costs of Production of Gas (Exclusive of Return) and Increment of Direct Costs Year 1940 Over 1939."

*[Copy of Table 12 of Cleveland Reply Brief before the Commission (p. 104)]*

| | Exhibit 67, 1939 | Exhibit 78, 1940 | Increment Costs—1940 over 1939 |
|---|---|---|---|
| "Direct Expenses of Producing Gas, Excl. of Depreciation and Depletion (Ex. 67, pp. 17, 39; Ex. 78, pp. 17, 23) | | | |
| 734.1 Gas Well Labor | $ 330,338.52 | $ 347,147.21 | |
| 735.1 Gas Well Supplies and Expenses | 130,999.56 | 164,662.01 | |
| 741 Maint. of Prod. Gas Well Equip. | 53,457.92 | 83,242.02 | |
| 745 Gas Well Royalties | 828,851.62 | 885,841.27 | |
| Total Direct Gas Well Expenses | 1,343,647.62 | 1,480,892.51 | |
| Gross Production Tax | 144,633.15 | 221,908.58 | |
| Total, Incl. Production Tax | 1,488,280.77 | 1,702,801.09 | |
| "Depreciation and Depletion (Ex. 78, p. 54) | | | |
| Operated Acreage | $ 36,772.47 | $ 57,084.00 | |
| Gas Well Construction | 182,755.43 | 286,492.00 | |
| Cost of Abandoning | 69,813.58 | 105,860.00 | |
| Total Depletion | 289,341.48 | 449,436.00 | |
| Depreciation of Gas Well Equipment (Ex. 61, p. 21; Ex. 78, p. 26) | 188,482.85 | 186,702.97 | |
| Total Depreciation and Depletion | $ 477,824.33 | $ 636,138.97 | |
| Volume of Gas Produced—M.c.f. (Ex. 78, p. 54) | 16,546,230 | 26,800,000 | 10,253,770 |
| "Direct Expenses per M.c.f. Produced | | | |
| 734.1 Gas Well Labor | 2.00¢ | 1.29¢ | |
| 735.1 Gas Well Supplies and Expenses | .79 | .61 | |
| 741 Maint. of Prod. Gas Well Equip. | .32 | .31 | |
| 745 Gas Well Royalties | 5.01 | 3.31 | |
| Total Direct Gas Well Expenses | 8.12 | 5.52 | |
| Gross Production Tax | .87 | .83 | |
| Total, Incl. Production Tax | 8.99¢ | 6.35¢ | |
| "Depreciation and Depletion per M.c.f. Produced: | | | |
| Depletion | 1.75¢ | 1.68¢ | |
| Depreciation of Gas Well Equipment | 1.14 | .70 | |
| Total Depreciation and Depletion | 2.89¢ | 2.38¢ | |
| "Total Direct Costs of Producing Gas, Incl. Depreciation and Depletion: | | | |
| Amount | $1,966,105.10 | $2,338,940.06 | $372,834.96 |
| Per M.c.f. Produced | 11.88¢ | 8.73¢ | 3.64¢" |

*(Copy of Appendix D, Hope Brief, p. 183)*

**SCHEDULE XI**

## HOPE NATURAL GAS COMPANY

**Subnormality of Hope's Costs in 1940 as Shown by the Commission's Findings**

| | 1939 | 1940 | Increase 1940 over 1939 |
|---|---|---|---|
| | (1) | (2) | (3) |
| 1. "Revenues from Interstate Sales .. | $14,866,894 | $19,296,755" | $4,429,861 |
| 2. "Operating Deductions [Expenses] | 11,845,649 | 12,997,845" | 1,152,196 |
| 3. "Net Operating Income from Interstate Sales ..... | $ 3,021,245 | $ 6,298,910" | $3,277,665 |
| 4. "Interstate Sales in M.c.f. ..... | 41,350,569 | 53,604,243" | 12,253,674 |

5. Increase in operating expenses, $1,152,196 ÷ Increase in M.c.f. sales, 12,253,674 = 9¢ per M.c.f.

*(From Hope Brief, p. 119; also lines 1, 2 and 3 quoted from Commission's "Findings as to Lawfulness of Past Rates," R. 1, p. 12, and line 4 from its Opinion, R. 1, p. 40)*

SCHEDULE XII

# HOPE NATURAL GAS COMPANY

## Fixed Assets, Total Sales and Revenue, Depreciation and Net Operating Gas Income per Books 1926-1940

| Year | Fixed Assets Per Books* | Hope's Total Sales Per Books | | Depreciation and Depletion Per Books | Hope Net Operating Gas Income Per Books | Total Col. (5) + (6) |
|---|---|---|---|---|---|---|
| | | M.c.f. | Revenue | | | |

## No. 891.

CITY OF CLEVELAND,
*Petitioner,*

v.

HOPE NATURAL GAS COMPANY,
*Respondent.*

## PETITION FOR A WRIT OF CERTIORARI

**To the United States Circuit Court of Appeals For the Fourth Circuit.**

The Director of Law on behalf of the City of Cleveland, Ohio respectfully prays that a writ of certiorari issue to review the judgment of the United States Circuit Court of Appeals for the Fourth Circuit, entered in the case of *Hope Natural Gas Company v. Federal Power Commission, City of Cleveland, City of Akron, and Pennsylvania Public Utility Commission* on February 16, 1943, setting aside the Federal Power Commission's "Order Reducing Rates" of the respondent, Hope Natural Gas Company, and setting aside the Federal Power Commission's "Findings as to Lawfulness of Past Rates," charged by respondent.

### OPINIONS BELOW.

The opinion of the Circuit Court of Appeals is not yet officially reported, but may be found at R.[1] IV, pp. 169-207. The opinion of the Federal Power Commission is found at R. I, pp. 1-89.

[1] In the record citations, roman numerals refer to the volume, arabic numerals to the page.

## JURISDICTION.

The judgment of the Circuit Court of Appeals was entered on February 16, 1943 (R. IV, p. 207). The jurisdiction of this Court is invoked under Section 240(a) of the Judicial Code, as amended by the Act of February 13, 1925, and Section 19(b) of the Natural Gas Act.

## STATUTE INVOLVED.

The pertinent provisions of the Natural Gas Act of 1938 (52 Stat. 821; 15 U. S. C. § 717 *et seq.*) are set forth in Appendix A, *infra*, pp. 22-24.

## QUESTIONS PRESENTED.

The Federal Power Commission, after complaints by Cleveland, Akron, and the Pennsylvania Public Utility Commission and after extensive hearings, found that Hope's interstate rates were unreasonable and unlawful and issued an order reducing Hope's future rates $3,609,857 annually. The Commission also determined the lawful rate for sales to Hope's affiliate, East Ohio, for a period subsequent to the passage of the Natural Gas Act and prior to the Commission's order fixing future rates. The Commission adopted a prudent investment rate base. The Circuit Court invoked the "present fair value" theory to set aside the Commission's findings and order. The questions presented are:

1. Whether, for rate-making purposes under the Natural Gas Act, the Commission is authorized to use a rate base determined exclusively upon the basis of "prudent investment" measured by actual legitimate cost less depreciation, or whether it must use a rate base which reflects estimates of the extent and effect of post-investment fluctuations in labor and material prices.

2. Whether the Commission must include in actual legitimate cost amounts previously and correctly

charged to operating expenses, in accordance with industry practice of the time, and determined by the Commission to have been recouped through revenues from the rate payers.

3. Whether the lower court erred in holding that in determining the actual existing or accrued depletion and depreciation, the Commission failed to take into account "the present condition of the property."

4. Whether the Commission may determine actual existing or accrued depletion and depreciation, and the annual allowance in operating expenses for these factors, upon the basis of actual legitimate cost, or whether the Commission must base such determinations upon estimates of "present fair value" of the property.

5. Whether the economic-service-life principle, as applied by the Commission in this case, is a reasonable method of determining the actual existing depletion and depreciation and the annual allowance therefor.

6. Whether the lower court erred in holding that $165,965 for an experimental deep-test well, which was completed dry and charged to operating expenses in 1941, should have been included in 1940 operating expenses.

7. Whether the rates fixed by the Commission are just and reasonable in the statutory sense and nonconfiscatory in the constitutional sense.

8. Whether the Commission has jurisdiction to determine the *lawful* rates for interstate sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and prior to the issuance of a Commission rate-fixing order.

9. Whether the lower court erred in holding that the Commission's "findings as to past rates * * * should be set aside."

## STATEMENT.

### The Respondent.

Hope Natural Gas Company, a wholly-owned subsidiary of the Standard Oil Company (New Jersey), is conceded to be a "natural-gas company" within the meaning of the Natural Gas Act (R. III, p. 19). Hope purchases and produces natural gas in West Virginia, transports it in pipe lines to the West Virginia-Ohio and West Virginia-Pennsylvania state lines, and there sells it in interstate commerce to its affiliates, East Ohio Gas Company and River Gas Company, for resale to ultimate consumers in Ohio, to its affiliate, Peoples Natural Gas Company, for resale to ultimate consumers in Pennsylvania, and to the non-affiliated Manufacturers Light and Heat Company and Fayette County Gas Company for resale in Pennsylvania. About 85% of Hope's total sales are in interstate commerce and 95% of such sales are to its aforementioned affiliates. About 15% of Hope's total volume of gas is sold in intrastate commerce to local consumers in West Virginia (R. I, p. 18). Hope has been purchasing, producing, transporting and selling natural gas for more than forty years. Hope's interstate sales in 1940 amounted to about 53,000,000 M.c.f. and its interstate gross revenues in that year amounted to $19,296,000 (R. I, p. 51).

### The Statute.

The Natural Gas Act (the "Act"), effective June 21, 1938, requires that all rates or charges in connection with the transportation or sale of natural gas subject to the Act must be just and reasonable and declares any rate or charge that is not just and reasonable to be unlawful (Sec. 4(a)). It provides that the Federal Power Commission (the "Commission"), upon complaint of any State, municipality, State Commission, or gas distributing company, or upon its own motion, whenever it finds that any rate is unjust or unreasonable, shall determine the rate to be

thereafter observed and in force, and shall fix the same by order; and, further, that the Commission "may order a decrease where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates" (Sec. 5(a)).

Any State, municipality, or State commission, complaining of anything done or omitted to be done by any natural gas company in contravention of the provisions of the Act may file a complaint with the Commission (Sec. 13). Under Section 14(a) the Commission may investigate "to determine whether any person has violated or is about to violate any provision of this act," and Section 16 empowers it to perform any and all acts as it may find necessary or appropriate to carry out the provisions of the Act. The Commission is required by Section 17(c) to make available to the several State Commissions "such information and reports as may be of assistance in State regulation of natural gas companies."

**The Proceedings Before the Commission.**

In July, 1938, the Cities of Cleveland and Akron filed complaints with the Federal Power Commission, charging that the rate collected by Hope from East Ohio was excessive and unreasonable (R. II, pp. 1, 7). Cleveland's complaint, filed two weeks after the Natural Gas Act became effective, was the first complaint received by the Commission under the Act. In October, 1938, the Commission, on its own motion, instituted an investigation to determine the reasonableness of all of Hope's interstate rates (R. II, p. 28). In March, 1939, the Pennsylvania Public Utility Commission filed a complaint with the Federal Power Commission, charging that the rates collected by Hope from Peoples Natural Gas Company, Manufacturers Light and Heat Company, and Fayette County Gas Company were unreasonable. (R. II, p. 18). The City of Cleveland's complaint, as amended and modified, prayed spe-

cially for a determination by the Commission that Hope's collected rate from East Ohio was unreasonable and therefore unlawful, and for a determination of just and reasonable Hope-East Ohio rates from June 30, 1939 to the date of the Federal Power Commission's decision, requesting such determinations "in aid of State regulation" and particularly to afford The Public Utilities Commission of Ohio a proper basis for disposition of a fund collected by East Ohio under bond from Cleveland consumers during the period since June 30, 1939 (R. II, p. 14). The City of Cleveland represented to the Federal Power Commission that, in a pending proceeding before The Public Utilities Commission of Ohio, Hope's distributing affiliate, East Ohio, sought to use the rate paid to Hope under the initial schedule filed by Hope with the Federal Power Commission, to support a claim that an ordinance rate of the municipality, suspended by the filing of a bond, should be permanently set aside, and that higher rates should be imposed upon the ultimate consumers of gas in the municipality. In October, 1939, the Federal Power Commission consolidated the three complaint cases and its own investigation of Hope's interstate wholesale rates for hearing (R. II, p. 34). On December 20, 1940, the Commission denied without prejudice a motion of the Cities of Cleveland and Akron for an immediate order reducing the Hope-East Ohio rate upon the Hope Company's own testimony, upon the ground that "there is insufficient evidence of record, at this time, to support the prayer for relief requested by movants," and subject to the reservation that "this order is not to be construed as a determination of any of the issues in the pending principal proceedings" (R. II, p. 43). Hearings were held in 1940 and 1941, and after briefs were filed, the case was argued orally before the Commission sitting *en banc* on October 27, 1941 (R. II, p. 48). The Commission decided the case on May 26, 1942 (R. I, pp. 1, 8) when it entered an "Order Reducing Rates" charged by Hope and in addition, separate

"Findings as to Lawfulness of Past Rates" collected by Hope from East Ohio.

**The Commission's Determinations.**

The Commission's "Order Reducing Rates" required Hope to reduce its interstate rates for the future to reflect a reduction of not less than $3,609,857 in operating revenues on an annual basis (R. I, p. 6). More particularly, the order required minimum reductions of 7 cents per M.c.f. from the 36.5 cent and 35.5 cent rates previously charged East Ohio and Peoples, respectively, and 3 cents per M.c.f. from the 31.5 cent rate previously charged Fayette County and Manufacturers Light and Heat (R. I, pp. 73-74). The Commission's "Findings as to Lawfulness of Past Rates," made in deciding the complaint of the City of Cleveland, determined that the rates collected by Hope from East Ohio were unjust, unreasonable, excessive, and therefore unlawful, by $830,892 in 1939, $3,219,551 during 1940 and $2,815,789 on an annual basis since 1940; it further determined just, reasonable and lawful rates for gas sold to East Ohio for resale for ultimate public consumption to be $11,528,608 for 1939, $11,507,185 for 1940 and $11,910,947 on an annual basis for 1941 and the first half of 1942 (R. I, pp. 12-13).

The Commission founded its "Order Reducing Rates" upon a rate base of $33,712,526, upon which it granted respondent a 6½% rate of return (R. I, p. 4), or $2,191,314, annually. The rate base was determined to be the actual legitimate cost of, or gross investment in, Hope's interstate property less existing depletion and depreciation, plus allowances for unoperated acreage, working capital and future net capital additions (R. I, p. 50).

The Commission's rate base was arrived at substantially as follows: The Commission found that Hope had kept complete documentary evidence, through books, records and vouchers, of its expenditures throughout its existence, so that no estimates were required to ascertain the

actual legitimate cost (R. I, pp. 23, 174). Pursuant to a check of the inventory of Hope's property in service and examination, analysis and audit of respondent's records, the Commission determined the cost to be $52,174,873 for the property devoted to the interstate sales, as of December 31, 1940 (R. I, p. 36). From this amount, the Commission then deducted accrued depletion and depreciation, which it found to be $22,328,016 (R. I, pp. 45-50). It arrived at this figure by applying the economic-service-life method to actual legitimate cost (R. I, p. 41). In making these determinations the Commission was guided by a study conducted by a qualified staff engineer, who made a field inspection of the Company's physical properties to aid in the determination of service lives (R. I, p. 42). The actual existing depletion and depreciation found by the Commission came to about $24,000,000 less than the depletion and depreciation which the Company had accrued on its books (R. I, p. 81). One of the Commissioners dissented on the ground that the Commission should have deducted accrued depreciation and depletion of not less than $38,000,000, the reserve remaining on the Company's books after it had transferred $7,500,000 from the reserve to surplus (R. I, p. 81). The Commission then added $1,392,021 for future net capital additions, $566,105 for useful unoperated acreage and $2,125,000 for working capital, yielding the total rate base of $33,712,526 (R. I, p. 50).

Using 1940 as a test year to forecast future revenues, and forecasting expenses at the 1940 figure plus $421,160, the Commission allowed respondent operating expenses and taxes amounting to $13,495,584 (R. I, pp. 62, 70, 72). Of this total $1,460,037 represented the annual allowance for depreciation and depletion (R. I, p. 53). This allowance was determined by the Commission in the same way as the actual existing depreciation and depletion, by the application of the economic-service-life method to the actual legitimate cost of respondent's properties (R. I, pp. 51-52).

The Commission's "Findings as to Lawfulness of Past Rates" were arrived at on the same principles and in substantially the same manner as the "Order Reducing Rates," except that they were based on actual operating experience for the years in question, instead of a test year (R. I, p. 11).

In issuing its order and findings the Commission rejected respondent's argument that post-investment changes in price levels had to be reflected in the rate base and in computing both accrued depreciation and depletion and the annual allowance in operating expenses for depreciation and depletion (R. I, pp. 20-23, 36, 41, 52). It condemned as hypothetical and without probative value the "reproduction cost new" and "trended original cost" estimates (amounting to approximately $97,000,000 and $105,000,000 respectively) submitted in evidence by respondent in support of its claimed rate base of some $66,000,000 (R. I, pp. 20-23). The Commission also rejected respondent's contention that, in any event, the rate base should have reflected an additional sum of about $17,000,000, representing largely expenditures for well-drilling prior to 1923, which respondent had charged to operating expense (R. I, pp. 24-34). Likewise unsuccessful were respondent's espousal of the "percent condition" theory of measuring accrued depreciation (R. I, p. 38), its claim that an expenditure of $165,965 for a deep-test well, which was completed dry and charged to operating expenses in 1941, should have been included in 1940 operating expenses, and its argument that the annual allowance for depletion and depreciation should take account of the capital additions recognized after 1940.

Pursuant to Section 19 of the Act, Hope filed an application for rehearing (R. II, p. 51), and upon denial, petitioned the United States Circuit Court of Appeals for the Fourth Circuit for a review of the Commission's "Order Reducing Rates" and the Commission's "Findings as to Lawfulness of Past Rates," naming the Federal Power Commission, the City of Cleveland, the City of Akron, and the Pennsylvania Public Utility Commission as parties

respondent (R. IV, p. 1). Hope did not seek a stay of the Commission's order from the Court of Appeals and such order has not been stayed; instead Hope agreed with its customer companies to charge the ordered rates pending litigation, upon the customers' agreement to make Hope whole if the Commission's order should be finally invalidated.

**The Opinion Below.**

On review, the court below, with one judge dissenting, set aside the Commission's "Order Reducing Rates" on the basic grounds that: (1) the Commission's use of a prudent investment rate base failed to reflect "present fair value," in view of the post-investment, "decided change in price levels" shown by the record and judicially noticeable (R. IV, pp. 172, 184); (2) the Commission erroneously excluded from the rate base the well-drilling costs charged to operating expenses prior to 1928 (R. IV, pp. 172, 184-189); (3) the Commission improperly determined accrued depreciation on the basis of "mere formulas," without considering the present physical condition of respondent's property (R. IV, pp. 172, 190); (4) the Commission should have based its annual allowance in operating expenses for depreciation and depletion upon the "present fair value" of the physical property, instead of upon actual legitimate cost (R. IV, pp. 194-196); (5) the Commission should have included in 1940 operating expenses $165,965 for an experimental deep-test well, which was completed dry and charged to operating expenses in 1941 (R. IV, p. 198); (6) the Commission should have made an annual allowance for depreciation and depletion on capital added to the rate base after 1940 (R. IV, p. 198).

The Court also set aside the Commission's "Findings as to Lawfulness of Past Rates," holding (1) that the Commission had no jurisdiction to make findings as to lawfulness of past rates "to be given effect in rate proceedings

before state commissions," and that rates filed with the Commission under Section 4 (e) of the Act became the only "lawful" ones which the utility could charge or accept until changed by the Commission; (2) that the Commission could investigate "the conditions and rates of the past" as an incident of its power to fix future rates, but that so viewed the findings in question were invalid for the same reasons as its "Order Reducing Rates," and were also objectionable in that they were based on actual experience for the years in question, rather than reasonable estimates of expenses based on experience during a prior period (R. IV, p. 203). The Court further held that if the Commission has jurisdiction to determine lawful rates for a period subsequent to the passage of the Natural Gas Act and prior to the making of an order fixing future rates, its determination is, in effect, an order of the Commission affecting substantial rights and contractual relationships of a party to a proceeding before it and is reviewable as such (R. IV, p. 203). On March 8, 1943, the Circuit Court granted a motion for the stay of its mandate pending further order, upon the condition that a petition for writ of certiorari be filed with the Supreme Court of the United States within thirty days.

## REASONS FOR GRANTING THE WRIT.

1. The public interest will be promoted by the prompt settlement in this Court of the questions involved.

The issue which is stirred by the main questions presented in this case is whether the Federal Power Commission under the Natural Gas Act may adopt the prudent investment method of rate-making.

The right of the Federal Power Commission to adopt the prudent investment method of rate-making under the Natural Gas Act is a matter of great importance to the Federal Power Commission in the administration of the Act; to States, municipalities, and State commissions, which are authorized by the Act to petition the Federal

Power Commission; to natural gas companies subject to the Act; and to the ultimate consumers of natural gas throughout the Nation, for whose benefit the Act was passed.

Several years ago the importance of a formal recognition by this Court of the freedom of an administrative body to adopt the prudent investment method of rate-making was urged in the concurring opinion of Mr. Justice Frankfurter, with whom Mr. Justice Black joined, in *Driscoll v. Edison Light and Power Company*, 307 U. S. 104, 122-123 (1939), as follows:

> "The decree below was clearly wrong. But in reversing it, the Court's opinion appears to give new vitality needlessly to the mischievous formula for fixing utility rates in *Smyth v. Ames*, 169 U. S. 466. The force of reason, confirmed by events, has gradually been rendering that formula moribund by revealing it to be useless as a guide for adjudication. Experience has made it overwhelmingly clear that *Smyth v. Ames* and the uses to which it has been put represented an attempt to erect temporary facts into legal absolutes. The determination of utility rates—what may fairly be exacted from the public and what is adequate to enlist enterprise—does not present questions of an essentially legal nature in the sense that legal education and lawyers' learning afford peculiar competence for their adjustment. These are matters for the application of whatever knowledge economics and finance may bring to the practicalities of business enterprise. The only relevant function of law in dealing with this intersection of government and enterprise is to secure observance of those procedural safeguards in the exercise of legislative powers which are the historic foundations of due process.
>
> "Mr. Justice Bradley nearly fifty years ago made it clear that the real issue is whether courts or commissions and legislatures are the ultimate arbiters of utility rates (dissenting, in *Chicago, M. & St. P. Ry. Co. v. Minnesota*, 134 U. S. 418, 461). Whatever may be thought of the wisdom of a broader judicial role

in the controversies between public utilities and the public, there can be no doubt that the tendency, for a time at least, to draw fixed rules of law out of *Smyth v. Ames* has met the rebuff of facts. At least one important state has for decades gone on its way unmindful of *Smyth v. Ames*, and other states have by various proposals sought to escape the fog into which speculations based on *Smyth v. Ames* have enveloped the practical task of administering systems of utility regulation.

"*Smyth v. Ames* should certainly not be invoked when it is not necessary to do so. The statute under which the present case arose represents an effort to escape *Smyth v. Ames* at least as to temporary rates. It is the result of a conscientious and informed endeavor to meet difficulties engendered by legal doctrines which have been widely rejected by the great weight of economic opinion (See 2 *Bonbright, The Valuation of Property*, 1081-1086, 1094-1102; 3A *Sharfman, The Interstate Commerce Commission*, 121-137) by authoritative legislative investigations (N. Y. State Commission on Revision of the Public Service Commission Law, *Report of Commissioners, passim* (1930)), by utility commissions throughout the country, (Proceedings of the Forty-Seventh Annual Convention of the National Association of Railroad and Utilities Commissioners, 232 *et seq.*; Proceedings of the Forty-Eighth Annual Convention of the National Association of Railroad and Utilities Commissioners, 115 *et seq.*, 289 *et seq.*; Proceedings of the Forty-Ninth Annual Convention of the National Association of Railroad and Utilities Commissioners, 159 *et seq.*) and by impressive judicial dissents. (See, e.g., Brandeis, *J.*, concurring, in *Missouri ex rel. Southwestern Bell Telephone Co. v. Public Service Comm'n*, 262 U. S. 276, 289 and bibliography therein contained.)"

More recently, Justices Black, Douglas, and Murphy, concurring in *Federal Power Commission v. Natural Gas Pipeline Company of America*, 315 U. S. 575, 606 (1942), flatly stated that the Federal Power Commission under the Natural Gas Act may adopt prudent investment as a rate base, in the following explicit language:

"As we read the opinion of the Court, the Commission is now freed from the compulsion of admitting evidence on reproduction cost or of giving any weight to that element of 'fair value.' The Commission may now adopt, if it chooses, prudent investment as a rate base—the base long advocated by Mr. Justice Brandeis. And for the reasons stated by Mr. Justice Brandeis in the *Southwestern Bell Telephone* case, there could be no constitutional objection if the Commission adhered to that formula and rejected all others."

Judge Dobie of the United States Circuit Court of Appeals for the Fourth Circuit, dissenting below, interprets the opinions in *Federal Power Commission v. Natural Gas Pipeline Company*, 315 U. S. 575 (1942), *supra*, as authorizing the Commission to adopt a prudent investment rate base, as follows (R. IV, pp. 203-205):

"The Commission, in arriving at the proper rate-base, frankly and openly adopted the Prudent Investment Theory and paid no attention to the present value of the properties of Hope. Mr. Justice Brandeis, in his classic concurring opinion (Mr. Justice Holmes joined in the opinion) in *State of Missouri ex rel. Southwestern Bell Telephone Co. v. Public Service Commission of Missouri*, 262 U. S. 276, has set forth, with his customary incisive clarity, the Prudent Investment Theory, together with the reasons for his belief in that theory. To my mind, the arguments he therein advances have never been convincingly refuted.

"Nearly twenty years have slipped by since that opinion was handed down. During this period, the pronouncements of the United States Supreme Court in this field have been many, varied and quite confusing. This fact has been pointed out by writers whose names are thrice legion. The recent case (involving the Natural Gas Act, with which we are also concerned) of *Federal Power Commission v. Natural Gas Pipeline Co.*, 315 U. S. 575, however, does call for some comment.

"The majority opinion in that case (written by Chief Justice Stone) contains no express discussion of

the Prudent Investment Theory and certainly does not in precise terms sanction the use of that theory alone. Interesting, though, in this connection is the oft-quoted statement of Chief Justice Stone (315 U. S. at page 586):

> "'The Constitution does not bind rate-making bodies to the service of any single formula or combination of formulas. Agencies to whom this legislative power has been delegated are free, within the ambit of their statutory authority, to make the pragmatic adjustments which may be called for by particular circumstances. Once a fair hearing has been given, proper findings made and other statutory requirements satisfied, the courts cannot intervene in the absence of a clear showing that the limits of due process have been overstepped. If the Commission's order, as applied to the facts before it and viewed in its entirety, produces no arbitrary result, our inquiry is at an end.'

But the concurring opinion of Justices Black, Douglas and Murphy, on the specific point under discussion, is as clear as crystal and as crisp as bacon; for this opinion flatly and squarely upholds the validity of the application of the Prudent Investment Theory, to the exclusion of any other theory (315 U. S. at page 606) in three sentences so free from ambiguity that they cannot be misunderstood:

> "'As we read the opinion of the Court, the Commission is now freed from the compulsion of admitting evidence on reproduction cost or giving any weight to that element of fair "value." The Commission may now adopt, if it chooses, prudent investment as a rate base—the base long advocated by Mr. Justice Brandeis. And for the reasons stated by Mr. Justice Brandeis in the *Southwestern Bell Telephone* case, there *could be no constitutional objection if the Commission adhered to that formula and rejected all others.*' (Italics ours.)

It is difficult for me to believe that the majority of the Supreme Court, believing otherwise, would leave such a statement unchallenged.

"A careful study of the Natural Gas Act (particularly the precise wording of Section 6) convinces me that Congress intended to give to the Federal Power Commission a wider latitude and a more extended discretion than had been given to any other federal board or commission under any previous statute in the field of rate making.

"Further, I think that the methods adopted by the Commission under the Prudent Investment Theory, in arriving at a rate-base in the instant case, were neither fanciful nor arbitrary. It seems to me, too, that there was substantial evidence to support the opposite findings of the Commission.

"Accordingly, I see here no adequate reasons for reversing on this score the decision and findings of the Commission."

In short, the prudent investment issue is important to the Federal Power Commission, States, municipalities, State commissions, natural gas companies, and ultimate consumers of natural gas. A dissenting opinion in the Court below interprets the decision of this Court in the *Natural Gas Pipeline Company Case* as authorizing the Commission to adopt a prudent investment rate base. Four of the Justices of this Court have rendered opinions urging that the public interest will be promoted by the prompt settlement of the prudent investment issue. There has been a change in the personnel of this Court since the *Natural Gas Pipeline* decision was rendered.

The first reason for granting the writ, therefore, is that the public interest will be promoted by the prompt settlement in this Court of the issue as to whether the Federal Power Commission under the Natural Gas Act may adopt the prudent investment method of rate-making.

2. The holding of the Court below that the Federal Power Commission has no jurisdiction to determine upon complaint of a municipality and upon its own investigation that a natural gas company has violated the Natural Gas Act Section 4(a) by charging an unjust, unreasonable and

therefore unlawful initial rate, and to determine the lawful rate for a period after the passage of the Natural Gas Act and prior to a Commission order fixing future rates, decides a federal question in a way probably in conflict with applicable decisions of this Court.

This question is of substantial importance to petitioner, the City of Cleveland, because the Federal Power Commission's "Findings as to Lawfulness of Past Rates," if valid, furnish an appropriate basis for refunds to Cleveland consumers of temporary rates collected under bond by respondent's affiliate, The East Ohio Gas Company, in pending proceedings before The Public Utilities Commission of Ohio (*East Ohio Gas Company v. City of Cleveland*, P. U. C. O. Nos. 11,001, 11,218, 11,442), of $3,600,000 or an average of about $13 per customer from June 30, 1939 to June 30, 1942.

Conversely, the holding of the Court below that initial filed rates of a natural gas company are the only lawful rates until changed by a future rate-fixing order of the Federal Power Commission, unless reviewed by this Court, would become *res judicata* between Cleveland and The East Ohio Gas Company as a privy of Hope, cf. *Sunshine Coal Company v. Adkins*, 310 U. S. 381, 389-391, 401-404 (1940) and in that event, the $3,600,000 would inure to the benefit of the Standard Oil Company (New Jersey), which is the sole owner of both Hope and East Ohio.

In holding that initial-filed schedule rates of a natural gas company are the only lawful rates until changed by a future rate-fixing order of the Federal Power Commission, the Court below has decided a federal question, to wit, the interpretation of a federal statute. More particularly, the lower Court has misinterpreted Section 4(a) of the Natural Gas Act, which provides that all rates and charges made by any natural gas company for or in connection with the sale of natural gas shall be just and reasonable, and any such rate or charge that is not just and reasonable is hereby declared to be unlawful. It has misinterpreted

Section 13 of the Natural Gas Act, which provides that any municipality complaining of anything done or omitted to be done by any natural gas company in contravention of the provisions of the Act may file a complaint with the Commission. It has misinterpreted Section 14(a) of the Natural Gas Act, which provides that the Commission may investigate to determine whether any person has violated any provision of this Act. It has misinterpreted Section 16 which empowers the Commission to perform any and all acts as it may find necessary or appropriate to carry out the provisions of the Act. And it has misinterpreted Section 17(c), which requires the Federal Power Commission to make available to the several State commissions such information and reports as may be of assistance in State regulation of natural gas companies.

The holding of the Court below that the Federal Power Commission has no jurisdiction to determine lawful rates for interstate sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and prior to the issuance of the Commission rate-fixing order, upon the ground that initial filed rates of a natural gas company are the only lawful rates until changed by a future rate-fixing order of the Federal Power Commission, is in conflict with applicable decisions of this Court.

First, the holding of the Court below is in conflict with the decision of this Court in *United States v. Morgan*, 307 U. S. 183, 191-193 (1939) (Mr. Justice Stone) where the Court said:

> "Assuming, as appellees contend, that after the Secretary's order of June, 1933, was set aside he could, in the reopened proceeding, neither promulgate a rate order as of that date nor make an order for the payment of money, he was still not without authority in the premises under the statute and the mandate of this Court. He was free to make an order fixing rates for the future, and for that purpose or any other within the purview of the Act he is now free to determine a reasonable rate for the period antedating any order he may now make. See *Atlantic Coast Line R. Co. v.*

*Florida*, 295 U. S. 301, 312. No prior decision of the Secretary stands in the way of his making the determination now. Cf. *Arizona Grocery Co. v. Atchison, T. & S. F. Ry. Co.*, 284 U. S. 370. The sole limitation upon his power, prescribed by sec. 309 (e), is that upon an inquiry instituted by him he may not order the payment of money. In other respects his power to investigate and decide is unaffected.[3] He may make inquiry 'as to any matter or thing concerning which a complaint is authorized to be made' to him, 'or concerning which any question may arise under any of the provisions' of the Act, 'or relating to the enforcement of any' provision. He is given 'the same power and authority to proceed with any inquiry instituted upon his own motion as though he had been appealed to by petition, including the power to make and enforce any order or orders in the case or relating to the matter or thing concerning which the inquiry is had, except orders for the payment of money.' Sec. 309(e).

"That the Secretary, acting under sec. 309(a), could now entertain a complaint by the patrons of appellees who have contributed to the fund in court charging that the rates exacted were in violation of sec. 305, seems to be conceded as is, we think, plain. Section 309(a) specifically provides: 'If * * * there appears to be any reasonable ground for investigating the complaint, it shall be the duty of the Secretary to investigate the matters complained of in such manner and by such means as he deems proper.' It seems equally plain that under sec. 309 (e) the Secretary, in the exercise of his discretion, may conduct such an investigation on his own motion. Ordinarily, it is true, there would be no occasion for such an investigation if, as a result of it, the Secretary could make no reparation order. But, as we shall presently point out, when the alleged excessive rates are *in custodia legis*, the court has authority and is under an equitable duty to dispose of them according to law and justice. Thus the Secretary has the best of reasons to exercise his power to determine whether the rates were reasonable and may rightly do so, if his determination can afford a proper basis for the action of the district court in making disposition of the fund."

---

[3] Sec. 309(e): [Copy of this section set forth in margin of Court's opinion will be found in Appendix B, *infra*, p. 25].

Second, the holding of the Court below is in conflict with the decision of this Court in *Atlantic Coast Line Railroad Company v. Florida*, 295 U. S. 301, 312 (1935) (Mr. Justice Cardozo), where the Court said:

> "* * * Unjust discrimination against interstate commerce, 'forbidden' by the statute, and there 'declared to be unlawful,' (Interstate Commerce Act, sec. 13(4); *Board of Railroad Commissioners v. Great Northern Ry. Co., supra*, at pp. 425, 430; *Florida v. United States*, 292 U. S. 1, 5) does not lose its unjust quality because the evil is without a remedy until the Commission shall have spoken. The word when it goes forth invested with the forms of law may fix the consequences to be attributed to the conduct of the carrier in reliance upon an earlier word, defectively pronounced, but aimed at the self-same evil, there from the beginning. The Commission was without power to give reparation for the injustice of the past, but it was not without power to inquire whether injustice had been done and to make report accordingly. * * *"

Third, the holding of the Court below is in conflict with applicable decisions of this Court because it overlooks the distinction between a legal and a lawful rate, enunciated by Mr. Justice Roberts in *Arizona Grocery v. Atchison Railway*, 284 U. S. 370 (1932), where the Court said at page 384:

> "* * * In order to render rates definite and certain, and to prevent discrimination and other abuses, the statute required the filing and publishing of tariffs specifying the rates adopted by the carrier, and made these the *legal* rates, that is, those which must be charged to all shippers alike. (*Id.*, sec. 6. *Kansas City Southern Ry. Co. v. Carl*, 227 U. S. 639, 653; *Pennsylvania R. Co. v. International Coal Co.*, 230 U. S. 184, 197; *Louisville & N. R. Co. v. Maxwell*, 237 U. S. 94, 97; *Dayton C. & I. Co. v. Cincinnati, N. O. & T. P. Ry. Co.*, 239 U. S. 446, 450. Any deviation from the published rate was declared a criminal offense, and also a civil wrong giving rise to an action for damages by the injured shipper. (Id. secs. 8, 9, 10.) Although the Act thus created a legal rate, it did not abrogate, but ex-

pressly affirmed, the common-law duty to charge no more than a reasonable rate, and left upon the carrier the burden of conforming its charges to that standard. (Id. sec. 1.) In other words, the legal rate was not made by the statute a lawful rate—it was lawful only if it was reasonable. * * *"

The second reason for granting the writ is that the holding of the Court below that the Federal Power Commission has no jurisdiction to determine the lawful rate for interstate gas for a period after the passage of the Natural Gas Act and prior to a Commission order fixing future rates, decides a federal question in a way probably in conflict with applicable decisions of this Court.

## CONCLUSION.

Since the public interest will be promoted by the prompt settlement in this Court of the issue as to whether the Federal Power Commission under the Natural Gas Act may employ the prudent investment method of rate-making, and

Since the holding of the Court below, that the Federal Power Commission has no jurisdiction to determine the lawful rate for interstate gas for a period after the passage of the Natural Gas Act and prior to a Commission order fixing future rates, decides a federal question in a way probably in conflict with applicable decisions of this Court,

Therefore, it is respectfully submitted that the petition for a writ of certiorari should be granted.

## APPENDIX A.

Applicable sections of The Natural Gas Act of 1938, C. 556, 52 Stat. 833; 15 U. S. C. Supp. V, Secs. 717-717w, provide:

Sec. 4.(a) All rates and charges made, demanded, or received by any natural-gas company for or in connection with the transportation or sale of natural gas subject to the jurisdiction of the Commission, and all rules and regulations affecting or pertaining to such rates or charges, shall be just and reasonable, and any such rate or charge that is not just and reasonable is hereby declared to be unlawful.

Sec. 5.(a) Whenever the Commission, after a hearing had upon its own motion or upon complaint of any state, municipality, State commission, or gas distributing company, shall find that any rate, charge, or classification demanded, observed, charged, or collected by any natural-gas company in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, or that any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory, or preferential, the Commission shall determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force, and shall fix the same by order: *Provided, however*, That the Commission shall have no power to order any increase in any rate contained in the currently effective schedule of such natural gas company on file with the Commission, unless such increase is in accordance with a new schedule filed by such natural gas company; but the Commission may order a decrease where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates.

Sec. 13. Any State, municipality, or State commission complaining of anything done or omitted to be done by any natural-gas company in contravention of the provisions of this act may apply to the Commission by petition, which shall briefly state the facts, whereupon a statement of the complaint thus made

shall be forwarded by the Commission to such natural-gas company, which shall be called upon to satisfy the complaint or to answer the same in writing within a reasonable time to be specified by the Commission.

Sec. 14.(a) The Commission may investigate any facts, conditions, practices, or matters which it may find necessary or proper in order to determine whether any person has violated or is about to violate any provision of this act or any rule, regulation, or order thereunder, or to aid in the enforcement of the provisions of this act or in prescribing rules or regulations thereunder, or in obtaining information to serve as a basis for recommending further legislation to the Congress. The Commission may permit any person to file with it a statement in writing, under oath or otherwise, as it shall determine, as to any or all facts and circumstances concerning a matter which may be the subject of investigation. The Commission, in its discretion, may publish in the manner authorized by section 312 of the Federal Power Act, and make available to State commissions and municipalities, information concerning any such matter.

Sec. 16. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, amend, and rescind such orders, rules, and regulations as it may find necessary or appropriate to carry out the provisions of this act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed. Unless a different date is specified therein, rules and regulations of the Commission shall be effective thirty days after publication in the manner which the Commission shall prescribe. Orders of the Commission shall be effective on the date and in the manner which the Commission shall prescribe. For the purposes of its rules and regulations, the Commission may classify persons and matters within its jurisdiction and prescribe different requirements for different classes of persons or mat-

ters. All rules and regulations of the Commission shall be filed with its secretary and shall be kept open in convenient form for public inspection and examination during reasonable business hours.

Sec. 17.(c) The Commission shall make available to the several State commissions such information and reports as may be of assistance in State regulation of natural-gas companies. Whenever the Commission can do so without prejudice to the efficient and proper conduct of its affairs, it may, upon request from a State commission, make available to such State commission as witnesses any of its trained rate, valuation, or other experts, subject to reimbursement of the compensation and traveling expenses of such witnesses. All sums collected hereunder shall be credited to the appropriation from which the amounts were expended in carrying out the provisions of this subsection.

Sec. 6.(a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.

(b) Every natural-gas company upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction.

## APPENDIX B.

Section 309 (c) of Packers and Stockyards Act:

§ 309 (c) "The Secretary may at any time institute an inquiry on his own motion, in any case and as to any matter or thing concerning which a complaint is authorized to be made to or before the Secretary, by any provision of this title, or concerning which any question may arise under any of the provisions of this title, or relating to the enforcement of any of the provisions of this title. The Secretary shall have the same power and authority to proceed with any inquiry instituted upon his own motion as though he had been appealed to by petition, including the power to make and enforce any order or orders in the case or relating to the matter or thing concerning which the inquiry is had, except orders for the payment of money."

## INDEX.

Introductory Statement ..... 1

Opinions Below ..... 2

Jurisdiction ..... 2

Statute Involved ..... 3

Questions Presented ..... 7

Statement ..... 9

1. The respondent ..... 9

2. The proceedings before the Commission ..... 9

3. The Commission's Determinations ..... 15

4. The Opinion Below ..... 18

Specification of Errors to be Urged ..... 19

Summary of Argument ..... 21

Argument ..... 24

I. The Court of Appeals Erred in Holding that the Commission's "Order Reducing Rates" and "Findings as to Lawfulness of Past Rates" Are Unconstitutional, for the Reason, Among Others, That There Is No Constitutional Question Involved in this Case ..... 24

No person is deprived of property and there is no taking of private property within the meaning of the Fifth Amendment ..... 24

By reason of the 100 per cent common ownership of respondent and respondent's principal customers by the Standard Oil Company (New Jersey), neither the Federal Power Commission's "Order Reducing Rates" nor its "Findings as to Lawfulness of Past Rates" substantially reduces, without further administrative action, the system's revenues or the annual return available to the owner of the business ..... 24

II. The Court of Appeals Further Erred in Setting Aside the Federal Power Commission's "Order Reducing Rates" for the Reason that Said Order is Authorized by the Natural Gas Act, and is Supported by Substantial Evidence ..... 28

A. The Court of Appeals erred in holding that for rate-making purposes under the Natural Gas Act, the Commission is not authorized to use a rate base determined exclusively upon the basis of "prudent investment" measured by actual legitimate cost less the depreciation therein, but that it must use a rate base which reflects estimates of the extent and effect of post investment fluctuations in labor and material prices ..... 28

1. The Natural Gas Act does not provide either expressly or by necessary implication that the lowest just and reasonable rate which the Commission may fix is one which yields a reasonable return upon the "present value" of the physical property 28

2. Under the Natural Gas Act, the selection of an appropriate rate base is a matter of sound discretion for the Federal Power Commission ..... 32

3. The Commission's selection of a rate base determined exclusively upon the basis of "prudent investment" measured by actual legitimate cost less the depreciation therein was a reasonable exercise of discretion 34

B. The Court of Appeals erred in holding that the Commission's findings of actual legitimate cost, the depreciation therein, the annual allowance for depreciation, and the dry hole as an operating expense of 1941, were not conclusive upon the court, since each of said findings has a rational basis and is supported by substantial evidence ..... 38

1. The Commission's finding of actual legitimate cost has a rational basis and is supported by substantial evidence ..... 39

2. The Commission's finding as to the depreciation in the actual legitimate cost has a rational basis and is supported by substantial evidence ..... 46

3. The Commission's finding as to the annual allowance for depreciation has a rational basis and is supported by substantial evidence ..... 52

4. The Commission's finding that the deep test dry hole is an operating expense in 1941, when it was booked, has a rational basis and is supported by substantial evidence, and even if there were error on the part of the Commission in not treating the said dry hole as an operating expense of 1940, the error is harmless ..... 54

III. Even If There Were a Constitutional Question Involved, as There is Not, the Court of Appeals Further Erred in Setting Aside the Federal Power Commission's "Order Reducing Rates" for the Reason that in the Absence of an Exercise of the Power of Eminent Domain or Other Direct Appropriation of Property for the Use of the United States Government, Respondent Was Not Entitled Under the Fifth Amendment to Anything More Than Due Process of Law ..... 56

IV. The Court of Appeals Erred in Holding that the Federal Power Commission Has No Jurisdiction to Determine the Lawful Rates for Interstate Sales of Natural Gas at Wholesale After the Effective Date of the Natural Gas Act of 1938 and Prior to the Issuance of a Commission Rate-Fixing Order, for the Reason that Said Jurisdiction is Implied from Expressly Granted Powers, and is Supported by the Legislative History of the Statute ..... 60

A. The jurisdiction of the Commission to determine *lawful* rates for interstate sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and prior to the issuance of a Commission rate-fixing order is implied from the expressly granted power to determine upon complaint of a municipality and upon the Commission's own investigation that the act has been violated by charging an unlawful rate and by not charging a lawful rate ..... 63

B. The power to determine a reasonable and lawful rate for a reasonable period antedating the Commission's first order fixing rates for the future is implied from the expressly granted power to fix reasonable future rates 67

C. The holding of the Court of Appeals that the Federal Power Commission is without jurisdiction to determine lawful rates for a period subsequent to the passage of the Natural Gas Act and prior to an initial rate-fixing order thwarts and defeats the intent and purpose of the Congress ..... 69

V. The Court of Appeals Further Erred in Holding That the Commission's "Findings as to Lawfulness of Past Rates" Should Be Set Aside Even If the Commission Has Jurisdiction to Make Such Findings, for the Reason that said Findings Have a Rational Basis and Are Supported by Substantial Evidence ..... 77

Conclusion ..... 78

**OCTOBER TERM, 1943.**

## No. 35.

CITY OF CLEVELAND,
*Petitioner,*

v.

HOPE NATURAL GAS COMPANY,
*Respondent.*

ON WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE FOURTH CIRCUIT.

## BRIEF OF PETITIONER.

This case is here on writ of certiorari, which this Court allowed on May 17, 1943 to review a judgment in favor of the Hope Natural Gas Company entered by the United States Circuit Court of Appeals for the Fourth Circuit—it is true, by a divided vote of its members[1]—setting aside the Federal Power Commission's "Order Reducing Rates" and "Findings as to Lawfulness of Past Rates," which were made in a consolidated proceeding under the Natural Gas Act of 1938, wherein the City of Cleveland, the City of Akron, and the Pennsylvania Public Utility Commission, were complainants, and the Federal Power Commission had made an investigation upon its own motion.

The City of Cleveland, petitioner, is especially interested in this review of the judgment of the divided court below, for the reason that the Federal Power Commission's

[1] John J. Parker, Senior Circuit Judge; Morris A. Soper, U. S. Circuit Judge; A. M. Dobie, U. S. Circuit Judge, dissenting. (IV R. 207.)

"Order Reducing Rates" and "Findings as to Lawfulness of Past Rates," if valid, constitute an appropriate basis for refunds to the ultimate consumers of natural gas in Cleveland of temporary rates collected under bond by respondent's affiliate, The East Ohio Gas Company[2] in presently pending proceedings before The Public Utilities Commission of Ohio[3] of over $5,000,000 or an average of about $20 per customer from June 30, 1939 to June 30, 1943.

## OPINIONS BELOW.

The opinion of the Circuit Court of Appeals (Parker, Senior Circuit Judge, and Soper, Circuit Judge), together with the dissenting opinion of Dobie, Circuit Judge (IV R. 169-207), is officially reported in 134 F. (2d) 287.

The opinion of the Federal Power Commission (I R. 1-89) is reported in 44 P. U. R. (N. S.) 1.

## JURISDICTION.

The judgment of the Circuit Court of Appeals was entered on February 16, 1943. (IV R. 207.)

The jurisdiction of this Court is invoked under Section 240(a) of the Judicial Code, as amended by the Act of February 13, 1925 (28 U. S. C. Secs. 346 and 347), and as made applicable by Section 19(b) of the Natural Gas Act of 1938. (52 Stat. 831; 15 U. S. C. Sec. 717r(b).)

This Court granted certiorari on May 17, 1943. (*City of Cleveland v. Hope Natural Gas Company*, ... U. S. ..., 63 S. Ct. 1165, 87 L. Ed. 995 (1943); IV R. 210.)

---

[2] Both The East Ohio Gas Company and respondent, Hope Natural Gas Company, are wholly-owned subsidiaries of the Standard Oil Company (New Jersey).

[3] *East Ohio Gas Company v. City of Cleveland*, P. U. C. O. Nos. 11,001, 11,218, 11,442.

## STATUTE INVOLVED.

The statute involved is the Natural Gas Act (52 Stat. 821; 15 U. S. C. Sec. 717, *et seq.*), which became effective June 21, 1938.

The sections of the Natural Gas Act directly involved are Sections 1, 4(a), 5(a), 6, 13, 14(a), 16, 17(c), 19(b), which provide:

Sec. 1. "(a) As disclosed in reports of the Federal Trade Commission made pursuant to S. Rec. 83 (Seventieth Congress, first session) and other reports made pursuant to the authority of Congress, it is hereby declared that the business of transporting and selling natural gas for ultimate distribution to the public is affected with a public interest, and that Federal regulation in matters relating to the transportation of natural gas and the sale thereof in interstate and foreign commerce is necessary in the public interest.

"(b) The provisions of this chapter shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas." (15 U. S. C. A. Sec. 717.)

Sec. 4(a). "(a) All rates and charges made, demanded, or received by any natural-gas company for or in connection with the transportation or sale of natural gas subject to the jurisdiction of the Commission, and all rules and regulations affecting or pertaining to such rates or charges, shall be just and reasonable, and any such rate or charge that is not just and reasonable is hereby declared to be unlawful." (15 U. S. C. A. Sec. 717c (a).)

Sec. 5(a) "(a) Whenever the Commission, after a hearing had upon its own motion or upon complaint of any State, municipality, State commission, or gas

distributing company, shall find that any rate, charge, or classification demanded, observed, charged, or collected by any natural-gas company in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, or that any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory, or preferential, the Commission shall determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force, and shall fix the same by order: *Provided, however,* That the Commission shall have no power to order any increase in any rate contained in the currently effective schedule of such natural gas company on file with the Commission, unless such increase is in accordance with a new schedule filed by such natural gas company; but the Commission may order a decrease where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates." (15 U. S. C. A. Sec. 717d (a).)

Sec. 6. "(a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.

"(b) Every natural-gas company upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction." (15 U. S. C. A. Sec. 717e.)

Sec. 13. "Any State, municipality, or State commission complaining of anything done or omitted to be done by any natural-gas company in contravention of the provisions of this chapter may apply to the Commission by petition, which shall briefly state the facts, whereupon a statement of the complaint thus

made shall be forwarded by the Commission to such natural-gas company, which shall be called upon to satisfy the complaint or to answer the same in writing within a reasonable time to be specified by the Commission." (15 U. S. C. A. Sec. 717l.)

Sec. 14(a). "(a) The Commission may investigate any facts, conditions, practices, or matters which it may find necessary or proper in order to determine whether any person has violated or is about to violate any provision of this chapter or any rule, regulation, or order thereunder, or to aid in the enforcement of the provisions of this chapter or in prescribing rules or regulations thereunder, or in obtaining information to serve as a basis for recommending further legislation to the Congress. The Commission may permit any person to file with it a statement in writing, under oath or otherwise, as it shall determine, as to any or all facts and circumstances concerning a matter which may be the subject of investigation. The Commission, in its discretion, may publish in the manner authorized by section 825k of Title 16, and make available to State commissions and municipalities, information concerning any such matter." (15 U. S. C. A. Sec. 717m (a).)

Sec. 16. "The Commission shall have power to perform any and all acts, and to prescribe, issue, make, amend, and rescind such orders, rules, and regulations as it may find necessary or appropriate to carry out the provisions of this chapter. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this chapter; and may prescribe the form or forms of all statements, declarations, applications and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed. Unless a different date is specified therein, rules and regulations of the Commission shall be effective thirty days after publication in the manner which the Commission shall prescribe. Orders of the Commission shall be effective on the date and in the manner which the Commission shall prescribe. For the purposes of its rules and regulations, the Commission may classify

persons and matters within its jurisdiction and prescribe different requirements for different classes of persons or matters. All rules and regulations of the Commission shall be filed with its secretary and shall be kept open in convenient form for public inspection and examination during reasonable business hours." (15 U. S. C. A. Sec. 717o.)

Sec. 17(c). "(c) The Commission shall make available to the several State commissions such information and reports as may be of assistance in State regulation of natural-gas companies. Whenever the Commission can do so without prejudice to the efficient and proper conduct of its affairs, it may, upon request from a State commission, make available to such State commission as witnesses any of its trained rate, valuation, or other experts, subject to reimbursement of the compensation and traveling expenses of such witnesses. All sums collected hereunder shall be credited to the appropriation from which the amounts were expended in carrying out the provisions of this subsection." (15 U. S. C. A. Sec. 717p (c).)

Sec. 19(b). "(b) Any party to a proceeding under this chapter aggrieved by an order issued by the Commission in such proceeding may obtain a review of such order in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the order relates is located or has its principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the order of the Commission upon the application for rehearing, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon any member of the Commission and thereupon the Commission shall certify and file with the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part. No objection to the order of the

Commission shall be considered by the court unless such objection shall have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do. The finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If any party shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court, affirming, modifying, or setting aside, in whole or in part, any such order of the Commission, shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 346 and 347 of Title 28, as amended." (15 U. S. C. A. Sec. 717r (b).)

## QUESTIONS PRESENTED.

1. Whether, for rate-making purposes under the Natural Gas Act, the Commission is authorized to use a rate base determined exclusively upon the basis of "prudent investment" measured by actual legitimate cost less depreciation, or whether it must use a rate base which reflects estimates of the extent and effect of post-investment fluctuations in labor and material prices.

2. Whether the Commission must include in actual legitimate cost amounts previously and correctly charged to operating expenses, in accordance with industry practice

of the time, and determined by the Commission to have been recouped through revenues from the rate payers.

3. Whether the lower court erred in holding that in determining the actual existing or accrued depletion and depreciation, the Commission failed to take into account "the present condition of the property."

4. Whether the Commission may determine actual existing or accrued depletion and depreciation, and the annual allowance in operating expenses for these factors, upon the basis of actual legitimate cost, or whether the Commission must base such determinations upon estimates of "present fair value" of the property.

5. Whether the economic-service-life principle, as applied by the Commission in this case, is a reasonable method of determining the actual existing depletion and depreciation and the annual allowance therefor.

6. Whether the lower court erred in holding that $165,965 for an experimental deep-test well, which was completed dry and charged to operating expenses in 1941, should have been included in 1940 operating expenses.

7. Whether the rates fixed by the Commission are just and reasonable in the statutory sense and nonconfiscatory in the constitutional sense.

8. Whether the Commission has jurisdiction to determine the **lawful** rates for interstate sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and prior to the issuance of a Commission rate-fixing order.

9. Whether the lower court erred in holding that the Commission's "findings as to past rates * * * should be set aside."

## STATEMENT.

### 1. The respondent.

Hope Natural Gas Company, a wholly owned subsidiary of the Standard Oil Company (New Jersey), is conceded to be a "natural-gas company" within the meaning of the Natural Gas Act. (III R. 19.) Hope purchases and produces natural gas in West Virginia, transports it in pipe lines to the West Virginia-Ohio and West Virginia-Pennsylvania state lines, and there sells it in interstate commerce to its affiliates East Ohio Gas Company and River Gas Company for resale to ultimate consumers in Ohio; to its affiliate Peoples Natural Gas Company for resale to ultimate consumers in Pennsylvania; and to the nonaffiliated Manufacturers Light and Heat Company and Fayette County Gas Company for resale to ultimate consumers in Pennsylvania. (I R. 106-110.) East Ohio, River and Peoples, like Hope, are 100 per cent owned subsidiaries of the Standard Oil Company (New Jersey). (I R. 106.) About 85 per cent of Hope's total sales are in interstate commerce and 95 per cent of such sales are to its aforementioned affiliates—East Ohio, River, and Peoples. About 15 per cent of Hope's total volume of gas is sold in intrastate commerce to local consumers in West Virginia. (I R. 18.) Hope has been purchasing, producing, transporting and selling natural gas for more than forty years. Hope's interstate sales in 1940 amounted to about 53,000,000 M.c.f. and its interstate gross revenues in that year amounted to $19,296,000. (I R. 51.)

### 2. The proceedings before the Commission.

The proceedings before the Commission were initiated by the filing of the complaint by the City of Cleveland against Hope Natural Gas Company in Docket No. G-100 on July 6, 1938. Cleveland's was the first complaint filed under the Natural Gas Act, which became effective on June 21, 1938.

The material allegations of the complaint of the City of Cleveland may be shortly stated. (II R. 1.) The complainant City of Cleveland is an Ohio municipal corporation and a municipality within the meaning of the Natural Gas Act. (Cleveland Complaint, par. first.) The defendant Hope Natural Gas Company is a West Virginia corporation engaged in the sale of natural gas in interstate commerce. (Cleveland Complaint, par. second.) The defendant Hope is a wholly owned subsidiary of the Standard Oil Company (New Jersey). (Cleveland Complaint, par. third.) Defendant Hope sells gas produced in West Virginia and delivers said gas to its affiliate, The East Ohio Gas Company, likewise a wholly owned subsidiary of the Standard Oil Company (New Jersey), at the Ohio River. (Cleveland Complaint, par third.) The interest of the City of Cleveland in this proceeding arises because East Ohio, which is the only company distributing natural gas in Cleveland, purchases approximately 70 per cent of the gas which it merchandises in Cleveland and other municipalities in Ohio from its affiliate, the defendant Hope. (Cleveland Complaint, par. third.) Under an intercorporate contract between defendant Hope and East Ohio, East Ohio pays to Hope annually a total of approximately $13,000,000. (Cleveland Complaint, par. fourth.) In a proceeding then pending before The Public Utilities Commission of Ohio, Hope's affiliate, East Ohio, was then seeking to use the rate paid to Hope under the initial schedule filed by Hope with the Federal Power Commission, to support a claim that an ordinance rate of the City of Cleveland for the two years ending June 30, 1939, suspended by the filing of a bond, should be permanently set aside, and that higher rates should be imposed upon the consumers of gas in Cleveland than would otherwise be allowable. (Cleveland Complaint, par. sixth.) The complaint further alleged that, in any event, a determination by the Federal Power Commission of the fair,

just and reasonable rate for gas sold by Hope to East Ohio at the Ohio River, was essential to the determination of a fair, just and reasonable rate for natural gas to be sold in Cleveland during the next ordinance period beginning June 30, 1939. (Cleveland Complaint, par. sixth.) Cleveland alleged on that sixth day of July, 1938, that the price charged by Hope to East Ohio for gas for resale in Cleveland and elsewhere is excessive, unjust and unreasonable. (Cleveland Complaint, par. fifth.)

On January 6, 1939, the City of Cleveland filed an amendment to its complaint. (II R. 14-15.) The amendment pointed out that pursuant to Section 14(a) of the Act the Federal Power Commission has authority to investigate any facts, conditions, practices, or matters which it may find necessary or proper in order to determine whether any person has violated or is about to violate any provision of the Natural Gas Act. (Cleveland Amendment, par. first.) It suggested that pursuant to Section 14(a), the Federal Power Commission is specifically authorized to make available to state commissions and municipalities, information concerning any such matter. (Cleveland Amendment, par. second.) The Cleveland Amendment further averred that under Section 4(a) of the Natural Gas Act, all rates and charges made, demanded or received by any natural gas company for or in connection with the transportation or sale of natural gas subject to the jurisdiction of the Commission must be just and reasonable and any such rate that is not just and reasonable is unlawful, and has been unlawful ever since the effective date of the Natural Gas Act on June 21, 1938. (Cleveland Amendment, par. third.) It urged that Congress had thus specifically authorized the Commission to investigate and determine whether the charges made by Hope Natural Gas Company and payments received from The East Ohio Gas Company were unjust, unreasonable and therefore contrary to Federal law, as of June 21, 1938, the effective date of the Natural Gas Act, and at all times subsequent thereto.

(Cleveland Amendment, par. fourth.) This amended complaint was itself filed under authority of Section 13 of the Natural Gas Act, which permits only a State, a municipality, or a State commission to file a complaint against anything done or omitted to be done by any natural gas company in contravention of the provisions of the Natural Gas Act. The Amendment to Cleveland's complaint specifically alleged that the price charged by Hope to East Ohio for natural gas on June 21, 1938, and has been at all times since excessive, unjust and unreasonable, at least in so far as said price has exceeded an average of 30 cents per M.c.f., and therefore was as of June 21, 1938, and has been at all times since, unlawful and contrary to the laws of the United States. (Cleveland Complaint, par. sixth.) The Federal Power Commission was urged to make the determination upon the ground that under the Natural Gas Act, Section 1, the only body which can determine in the first instance whether the price charged by Hope to East Ohio and received by Hope from East Ohio has been unlawful and contrary to the laws of the United States is the Federal Power Commission. (Cleveland Complaint, par. seventh.) The City's Amendment to Complaint asserted finally that a determination by the Federal Power Commission in accordance with the prayer of this amendment should be of assistance in the cases of Cleveland and other Ohio municipalities then pending before The Public Utilities Commission of Ohio, in that the reasonableness of the suspended ordinance rate in Cleveland for the two year period ending June 30, 1939, is ultimately dependent upon the lawfulness of the charge made by Hope Natural Gas Company to The East Ohio Gas Company at the Ohio River, and in the case of the affiliated *East Ohio Gas Company v. Cleveland*, then pending before The Public Utilities Commission of Ohio, no allowance can be made in the operating expenses of East Ohio which is unlawful either for the affiliated buyer to pay or for the affiliated seller to charge or receive. (Cleveland Amendment to Complaint, par. seventh.)

At the trial before the Commission, the City's amended complaint was modified. (Reply Brief of City of Cleveland before Federal Power Commission, filed September 30, 1941.) The City reported that during the Federal Power Commission's investigation and hearings in the Hope case, the Ohio Commission had decided the related *East Ohio Gas Company* case involving Cleveland natural gas rates for the two year period ended June 30, 1939. (*East Ohio Gas Company v. Cleveland*, 27 P. U. R. (N. S.) 387 (decided January 10, 1939); aff'd *The East Ohio Gas Company v. Public Utilities Commission of Ohio* (two cases), 137 O. S. 225 (1940).) Hence the City conceded that the lawfulness of the Hope-East Ohio rate from June 21, 1938 to June 30, 1939 had become moot. However, Cleveland further advised the Federal Power Commission that by reason of the pendency of another East Ohio appeal to the Ohio Commission from a later Cleveland rate ordinance, the ownership of moneys collected under bond by East Ohio in Cleveland since June 30, 1939, was still in issue in 1941 under the retroactive rate-fixing powers of the Ohio Commission. (Ohio General Code, Sec. 614-44-614-47, both inclusive.) (*East Ohio Gas Company v. Cleveland*, P. U. C. O. Nos. 11,001, 11,218 and 11,442.) Therefore, the City modified its complaint as amended by relating its charge that Hope had violated the Natural Gas Act, Section 4(a) by charging East Ohio an unreasonable rate and by not charging East Ohio a reasonable rate, only to the period since and after June 30, 1939. (Reply Brief of City of Cleveland before Federal Power Commission filed September 30, 1941.)

The Complaint of the City of Cleveland, as so amended and modified, thus prayed (1) for an investigation by the Federal Power Commission, a finding that the Hope-East Ohio rate *is* excessive and unreasonable, and for the fixing of a just, fair and reasonable rate for the future; (2) that the Commission determine separately in aid of state regulation that the Hope-East Ohio rate *has been* unjust, un-

reasonable and unlawful from June 30, 1939 to the date of its determination, and that the Commission further determine that a reasonable Hope-East Ohio rate for such period was not more than 30 cents per M.c.f.

The allegations of Cleveland's complaint as amended were put in issue by the answer of Hope Natural Gas Company to complaint of the City of Cleveland, filed August 18, 1938 (II R. 3) and by the answer of Hope Natural Gas Company to amendment to complaint of the City of Cleveland filed February 6, 1939. (II R. 16.)

A complaint against Hope similar to that filed by the City of Cleveland was filed by the City of Akron in July of 1938, charging that the rate collected by Hope from East Ohio was excessive and unreasonable. (II R. 7.) In October, 1938, the Federal Power Commission, on its own motion, instituted an investigation to determine the reasonableness of all Hope's interstate rates. (II R. 28.) In March, 1939, the Pennsylvania Public Utility Commission filed a complaint with the Federal Power Commission, charging that the rates collected by Hope from Peoples Natural Gas Company, Manufacturers Light and Heat Company, and Fayette County Gas Company, were unreasonable. (II R. 18.) In October, 1939, the Federal Power Commission consolidated the three complaint cases and its own investigation of Hope's interstate wholesale rates for hearing. (II R. 34.) On December 20, 1940, the Commission denied without prejudice a motion of the Cities of Cleveland and Akron for an immediate order reducing the Hope-East Ohio rate upon the Hope company's own testimony, upon the ground that "there is insufficient evidence of record, at this time, to support the prayer for relief requested by movants," and subject to the reservation that "this order is not to be construed as a determination of any of the issues in the pending principal proceeding." (II R. 43.) Hearings were held in 1940 and 1941, and after briefs were filed, the case was argued orally before the Commission sitting *en banc* on October

27, 1941. (II R. 48.) The Commission decided the case on May 26, 1942 (I R. 1, 8) when it entered its "Order Reducing Rates" charged by Hope and in addition, made separate "Findings as to Lawfulness of Past Rates" collected by Hope from East Ohio.

**3. The Commission's Determinations.**

The Commission's "Order Reducing Rates" required Hope to reduce its interstate rates for the future to reflect a reduction of not less than $3,609,857 in operating revenues on an annual basis. (I R. 6.) More particularly, the order required minimum reductions of 7 cents per M.c.f. from the 36.5 cent and 35.5 cent rates previously charged the affiliates, East Ohio and Peoples, respectively, and 3 cents per M.c.f. from the 31.5 cent rate previously charged the non-affiliates, Fayette County and Manufacturers Light and Heat. (I R. 73-74.) The Commission's "Findings as to Lawfulness of Past Rates," made in deciding the complaint of the City of Cleveland, determined that the rates collected by Hope from East Ohio were unjust, unreasonable, excessive, and therefore unlawful, by $830,892 in 1939, $3,219,551 during 1940 and $2,815,789 on an annual basis since 1940; it further determined just, reasonable and lawful rates for gas sold to East Ohio for resale for ultimate public consumption to be $11,528,608 for 1939, $11,507,185 for 1940 and $11,910,947 on an annual basis for 1941 and the first half of 1942. (I R. 12-13.)

The Commission founded its "Order Reducing Rates" upon a rate base of $33,712,526, upon which it granted respondent a 6½ per cent rate of return (I R. 4), or $2,191,314, annually. The rate base was determined to be the actual legitimate cost of, or gross investment in, Hope's interstate property less existing depletion and depreciation, plus allowances for unoperated acreage, working capital and future net capital additions. (I R. 50.)

The Commission's rate base was arrived at substantially as follows: The Commission found that Hope had

kept complete documentary evidence, through books, records and vouchers, of its expenditures throughout its existence, so that no estimates were required to ascertain the actual legitimate cost. (I R. 23, 174.) Pursuant to a check of the inventory of Hope's property in service and examination, analysis and audit of respondent's records, the Commission determined the cost to be $52,174,873 for the property devoted to the interstate sales, as of December 31, 1940. (I R. 36.) From this amount, the Commission then deducted accrued depletion and depreciation, which it found to be $22,328,016. (I R. 45-50.) It arrived at this figure by applying the economic-service-life method to actual legitimate cost. (I R. 41.) In making these determinations the Commission was guided by a study conducted by a qualified staff engineer, who made a field inspection of the Company's physical properties to aid in the determination of service lives. (I R. 42.) The actual existing depletion and depreciation found by the Commission came to about $24,000,000 less than the depletion and depreciation which the Company had accrued on its books. (I R. 81.) One of the Commissioners dissented on the ground that the Commission should have deducted accrued depreciation and depletion of not less than $38,000,000, the reserve remaining on the Company's books after it had transferred $7,500,000 from the reserve to surplus. (I R. 81.) The Commission then added $1,392,021 for future net capital additions, $566,105 for useful unoperated acreage and $2,125,000 for working capital, yielding the total rate base of $33,712,526. (I R. 50.)

Using 1940 as a test year to forecast future revenues, and forecasting expenses at the 1940 figure plus $421,160, the Commission allowed respondent operating expenses and taxes amounting to $13,495,584. (I R. 62, 70, 72.) Of this total $1,460,037 represented the annual allowance for depreciation and depletion. (I R. 53.) This allowance was determined by the Commission in the same way as the actual existing depreciation and depletion, by the

application of the economic-service-life method to the actual legitimate cost of respondent's properties. (I R. 51-52.)

The Commission's "Findings as to Lawfulness of Past Rates" were arrived at on the same principles and in substantially the same manner as the "Order Reducing Rates," except that they were based on actual operating experience for the years in question, instead of a test year. (I R. 11.)

In issuing its order and findings the Commission rejected respondent's argument that post investment changes in price levels had to be reflected in the rate base and in computing both accrued depreciation and depletion and the annual allowance in operating expenses for depreciation and depletion. (I R. 20-23, 36, 41, 52.) It condemned as hypothetical and without probative value the "reproduction cost new" and "trended original cost" estimates (amounting to approximately $97,000,000 and $105,000,000 respectively) submitted in evidence by respondent in support of its claimed rate base of some $66,000,000. (I R. 20-23.) The Commission also rejected respondent's contention that, in any event, the rate base should have reflected an additional sum of about $17,000,000, representing largely expenditures for well-drilling prior to 1923, which respondent had charged to operating expense. (I R. 24-34.) Likewise unsuccessful were respondent's espousal of the "per cent condition" theory of measuring accrued depreciation (I. R. 38), its claim that an expenditure of $165,965 for a deep-test well, which was completed dry and charged to operating expenses in 1941, should have been included in 1940 operating expenses, and its argument that the annual allowance for depletion and depreciation should take account of the capital additions recognized after 1940.

Pursuant to Section 19 of the Act, Hope filed an application for rehearing (II R. 51), and upon denial, petitioned the United States Circuit Court of Appeals for the Fourth Circuit for a review of the Commission's "Order

Reducing Rates" and the Commission's "Findings as to Lawfulness of Past Rates," naming the Federal Power Commission, the City of Cleveland, the City of Akron, and the Pennsylvania Public Utility Commission as parties respondent. (IV R. 1.) Hope did not seek a stay of the Commission's order from the Court of Appeals and such order has not been stayed; instead Hope agreed with its customer companies to charge the ordered rates pending litigation, upon the customers' agreement to make Hope whole if the Commission's order should be finally invalidated.

**4. The Opinion Below.**

On review, the court below, with one judge dissenting, set aside the Commission's "Order Reducing Rates" on the basic grounds that: (1) the Commission's use of a prudent investment rate base failed to reflect "present fair value," in view of the post investment, "decided change in price levels" shown by the record and judicially noticeable (IV R. 172, 184); (2) the Commission erroneously excluded from the rate base the well-drilling costs charged to operating expenses prior to 1923 (IV R. 172, 184-189); (3) the Commission improperly determined accrued depreciation on the basis of "mere formulas," without considering the present physical condition of respondent's property (IV R. 172, 190); (4) the Commission should have based its annual allowance in operating expenses for depreciation and depletion upon the "present fair value" of the physical property, instead of upon actual legitimate cost (IV R. 194-196); (5) the Commission should have included in 1940 operating expenses $165,963 for an experimental deep-test well, which was completed dry and charged to operating expenses in 1941 (IV R. 198); (6) the Commission should have made an annual allowance for depreciation and depletion on capital added to the rate base after 1940. (IV R. 196.)

The lower court also set aside the Commission's "Findings as to Lawfulness of Past Rates," holding (1) that the Commission had no jurisdiction to make findings as to the lawfulness of past rates "to be given effect in rate proceedings before state commissions," and that rates filed with the Commission under Section 4(c) of the Act became the only "lawful" ones which the utility could charge or accept until changed by the Commission; (2) that the Commission could investigate "the conditions and rates of the past" as an incident of its power to fix future rates, but that so viewed the findings in question were invalid for the same reasons as its "Order Reducing Rates," and were also objectionable in that they were based on actual experience for the years in question, rather than reasonable estimates of expenses based on experience during a prior period. (IV R. 203.) The Court further held that if the Commission has jurisdiction to determine lawful rates for a period subsequent to the passage of the Natural Gas Act and prior to the making of an order fixing future rates, its determination is, in effect, an order of the Commission affecting substantial rights and contractual relationships of a party to a proceeding before it and is reviewable as such. (IV R. 203.) On March 8, 1943, the Circuit Court granted a motion for the stay of its mandate pending further order, upon the condition that a petition for writ of certiorari be filed with the Supreme Court of the United States within thirty days. (IV R. 208.)

## SPECIFICATION OF ERRORS TO BE URGED.

1. The Court of Appeals erred in holding that for rate-making purposes under the Natural Gas Act, the Commission is not authorized to use a rate base determined exclusively upon the basis of "prudent investment" measured by actual legitimate cost less depreciation, but that it must use a rate base which reflects estimates of the extent and effect of post investment fluctuations in labor and material prices.

2. The Court of Appeals erred in holding that the Commission must include in actual legitimate cost amounts previously and correctly charged to operating expenses, in accordance with industry practice of the time and determined by the Commission to have been recouped through revenues from the rate payers.

3. The Court of Appeals erred in holding that in determining the actual existing or accrued depletion and depreciation, the Commission failed to take into account "the present condition of the property."

4. The Court of Appeals erred in holding that the Commission may not determine actual existing or accrued depletion and depreciation, and the annual allowance in operating expenses for these factors, upon the basis of actual legitimate cost, but that the Commission must base such determinations upon estimates of "present fair value" of the property.

5. The Court of Appeals erred in holding that the economic service-life principle, as applied by the Commission in this case is not a reasonable method of determining the actual existing depletion and depreciation and the annual allowance therefor.

6. The Court of Appeals erred in holding that $165,963 for an experimental deep-test well, which was completed dry and charged to operating expenses in 1941, should have been included in 1940 expenses.

7. The Court of Appeals erred in holding that the rates fixed by the Commission are not just and reasonable in the statutory sense and are confiscatory in the constitutional sense.

8. The Court of Appeals erred in holding that the Commission has no jurisdiction to determine the *lawful* rates for interstate sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and prior to the issuance of a Commission rate-fixing order.

9. The Court of Appeals erred in holding that the Commission's "Findings as to past rates * * * should be set aside."

## SUMMARY OF ARGUMENT.

### I.

The Court of Appeals erred in holding that the Commission's "Order Reducing Rates" and "Findings as to Lawfulness of Past Rates" are unconstitutional, for the reason, among others, that there is no constitutional question involved in this case.

No person is deprived of property and there is no taking of private property within the meaning of the Fifth Amendment. By reason of the 100 per cent common ownership of respondent and respondent's principal customers by the Standard Oil Company (New Jersey), neither the Federal Power Commission's "Order Reducing Rates" nor its "Findings as to Lawfulness of Past Rates" substantially reduces, without further administrative action, the system's revenues or the annual return available to the owner of the business.

### II.

The Court of Appeals further erred in setting aside the Federal Power Commission's "Order Reducing Rates," for the reason that said order is authorized by the Natural Gas Act, and is based upon findings which have a rational basis and are supported by substantial evidence.

The Court of Appeals erred in holding that for rate-making purposes under the Natural Gas Act, the Commission is not authorized to use a rate base determined exclusively upon the basis of "prudent investment" measured by actual legitimate cost less the depreciation therein but that it must use a rate base which reflects estimates of the extent and effect of post investment fluctuations in labor and material prices. The Natural Gas Act does not provide

either expressly or by necessary implication that the lowest just and reasonable rate which the Commission may fix is one which yields a reasonable return upon the "present value" of the physical property. Under the Natural Gas Act, the selection of an appropriate rate base is a matter of sound discretion for the Federal Power Commission. The Commission's selection of a rate base determined exclusively upon the basis of "prudent investment" measured by actual legitimate cost less the depreciation therein was a reasonable exercise of discretion.

The Court of Appeals erred in holding that the Commission's findings of actual legitimate cost, the depreciation therein, the annual allowance for depreciation, and the dry hole as an operating expense of 1941, were not conclusive upon the court since each of said findings has a rational basis and is supported by substantial evidence.

## III.

Even if there were a constitutional question involved, as there is not, the Court of Appeals further erred in setting aside the Federal Power Commission's "Order Reducing Rates" for the reason that in the absence of an exercise of the power of eminent domain or other direct appropriation of property for the use of the United States Government, respondent was not entitled under the Fifth Amendment to anything more than due process of law.

## IV.

The Court of Appeals erred in holding that the Federal Power Commission has no jurisdiction to determine the lawful rates for interstate sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and prior to the issuance of a Commission rate-fixing order for the reason that said jurisdiction is implied from expressly granted powers, and is supported by the legislative history of the statute.

The jurisdiction of the Commission to determine lawful rates for interstate sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and, prior to the issuance of a Commission rate-fixing order is implied from the expressly granted power to determine upon complaint of a municipality and upon the Commission's own investigation that the Act has been violated by charging an unlawful rate and by not charging a lawful rate.

The power to determine a reasonable and lawful rate for a reasonable period antedating the Commission's first order fixing rates for the future is implied from the expressly granted power to fix reasonable future rates.

The holding of the Court of Appeals that the Federal Power Commission is without jurisdiction to determine lawful rates for a period subsequent to the passage of the Natural Gas Act and prior to an initial rate-fixing order thwarts and defeats the intent and purpose of Congress.

## V.

The Court of Appeals further erred in holding that the Commission's "Findings as to Lawfulness of Past Rates" should be set aside even if the Commission has jurisdiction to make such findings, for the reason that said findings have a rational basis and are supported by substantial evidence.

## ARGUMENT.

### I.

### THE COURT OF APPEALS ERRED IN HOLDING THAT THE COMMISSION'S "ORDER REDUCING RATES" AND "FINDINGS AS TO LAWFULNESS OF PAST RATES" ARE UNCONSTITUTIONAL, FOR THE REASON, AMONG OTHERS, THAT THERE IS NO CONSTITUTIONAL QUESTION INVOLVED IN THIS CASE.

**No person is deprived of property and there is no taking of private property within the meaning of the Fifth Amendment.**

**By reason of the 100 per cent common ownership of respondent and respondent's principal customers by the Standard Oil Company (New Jersey), neither the Federal Power Commission's "Order Reducing Rates" nor its "Findings as to Lawfulness of Past Rates" substantially reduces, without further administrative action, the system's revenues or the annual return available to the owner of the business.**

Contrary to the holding of the court below (IV R. 1847) there is no question of confiscation under the Fifth Amendment involved in this case.

A regulation of the rates of a corporation can deprive a person of property within the meaning of the Fifth Amendment only by reducing the earnings available for interest to bondholders and dividends to stockholders. *Chicago, etc., Railway Company v. Wellman*, 143 U. S. 339, 345 (1892) (Mr. Justice Brewer).

In *McCart v. Indianapolis Water Company*, 302 U. S. 419, 433-434 (1938), Mr. Justice Black, dissenting, said:

> "The doctrine against confiscatory rates is based upon the theory of protecting the right of bondholders to their interest and that of stockholders to a fair return upon the value of their actual investments. While this matter has been confused by the 'reproduction cost' theory, the fact remains that, as applied to corporations, it is the interest of the stockholders and bondholders which the due process clause protects."

Where the seller and purchaser are corporations owned by the same stockholder, and there are no bondholders, a reduction in rates of the seller alone reduces *pro tanto* the costs of the purchaser, and there is no deprivation of property, because no reduction in the earnings available for dividends to the stockholder. The Federal Power Commission under the Natural Gas Act, unlike the Interstate Commerce Commission under the Interstate Commerce Commission Act and the Federal Communications Commission under the Federal Communications Commission Act, does not by its order control the rate which the public shall pay. Under the Natural Gas Act, the regulation of local distribution rates is left to the states. (Natural Gas Act, Section 1(b), *supra*, p. 3.)

A mere division order of the Interstate Commerce Commission does not take private property for the public. See *B. & O. Railroad Company v. United States*, 298 U. S. 349 (1936), concurring opinion of Justices Brandeis, Stone, Roberts, and Cardozo, pages 382-383. With even greater force it may be said that an order of the Federal Power Commission reducing rates charged by a 100 per cent owned subsidiary to another 100 per cent owned subsidiary of the same holding company does not take private property for the public. That is this case.

The Federal Power Commission's "Order Reducing Rates" in this case does not, standing alone, without further administrative action, substantially reduce the annual return available for dividends to respondent's sole stockholder, Standard Oil Company (New Jersey). *A fortiori*, the Federal Power Commission's "Findings as to Lawfulness of Past Rates" do not, in the absence of further administrative action, reduce the annual return available to respondent's sole stockholder.

Respondent, Hope Natural Gas Company, is wholly owned by the Standard Oil Company (New Jersey). (*Supra*, p. 9.) The three principal interstate customer companies of respondent, namely The East Ohio Gas Company,

Peoples Natural Gas Company, and River Gas Company, are likewise wholly owned by the Standard Oil Company (New Jersey). (*Supra*, p. 9.) The Federal Power Commission's "Order Reducing Rates" of respondent, Hope Natural Gas Company, reduces *pro tanto* the operating costs of petitioner's affiliates, East Ohio, Peoples, and River, and increases *pro tanto* the return available for dividends to Standard from these affiliates, unless and until some action is taken by a state commission which reduces the revenue received by the system from the gas consuming public.

Respondent conceded in its brief before the United States Circuit Court of Appeals for the Fourth Circuit that "to have either reductions or increases in gas rates reflected to consumers requires not merely the approval of the Federal Power Commission but of the state commission" (*Hope Natural Gas Company v. Federal Power Commission, et al.*, C. C. A. 4, No. 4979, Brief of Petitioner, Hope Natural Gas Company, p. 118.) As to the three principal interstate customers of respondent, the Federal Power Commission's "Order Reducing Rates" does not therefore reduce the annual return available for dividends to respondent's sole stockholder Standard Oil Company (New Jersey).

The inconsequential reduction in respondent's rates to The Manufacturers Light and Heat Company and the Fayette County Gas Company, which are not owned by the Standard Oil Company (New Jersey), included in the Commission's "Order Reducing Rates," does not reduce the total return available for dividends to the Standard Oil Company (New Jersey) in an amount sufficient to lay any ground for a claim of confiscation.

The Federal Power Commission's "Order Reducing Rates," standing alone, thus reduces the annual return available for dividends for respondent's sole stockholder Standard Oil Company (New Jersey) in a total

amount of not to exceed $55,815 per year. (I R. 6, 51.)[1] This reduction of the annual return available for dividends to Standard Oil, being only 8/100 of one per cent of respondent's claimed rate base of $66,000,000, constitutes no basis for invoking the Fifth Amendment to the Constitution of the United States. The respondent's petition for review made no complaint of the absence of an allocation as between the affiliated and nonaffiliated customers (IV R. 1-42), and petitioner has no basis for a claim that the 3 cents per M.c.f. reduction in the nonaffiliated Manufacturers and Fayette County rate (as compared with the 7 cent reduction in rates to affiliates Peoples and East Ohio) is separable from the effect of the order as a whole, and no such claim has been made. Cf. *Puget Sound Traction Co. v. Reynolds*, 244 U. S. 574, 579-80 (1917) (Mr. Justice Pitney).

For the court below to invoke the Fifth Amendment at this time is at least premature. See *Dayton Power and Light Company v. Public Utilities Commission of Ohio*, 292 U. S. 398, 414-5 (1934) (Mr. Justice Cardozo).

The court below erroneously concluded that a question of confiscation was involved, because the Federal Power Commission's order in this case manifestly works no deprivation of property of any person within the meaning of the Fifth Amendment to the Constitution of the United States.

"The Constitution," as Mr. Justice Holmes once said, "is not to be satisfied with a fiction." *Hyde v. United States*, 225 U. S. 347, 390 (1912) (Mr. Justice Holmes, dissenting).

## II.

**THE COURT OF APPEALS FURTHER ERRED IN SETTING ASIDE THE FEDERAL POWER COMMISSION'S "ORDER REDUCING RATES" FOR THE REASON THAT SAID ORDER IS AUTHORIZED BY THE NATURAL GAS ACT, AND IS SUPPORTED BY SUBSTANTIAL EVIDENCE.**

**A. The Court of Appeals erred in holding that for rate-making purposes under the Natural Gas Act, the Commission is not authorized to use a rate base determined exclusively upon the basis of "prudent investment" measured by actual legitimate cost less the depreciation therein, but that it must use a rate base which reflects estimates of the extent and effect of post investment fluctuations in labor and material prices.**

It is conceded that the Commission gave no weight to the Company's evidence of post-investment changes in labor and material prices. The question presented is whether the statute requires the Commission to give some, if not controlling weight, to evidence of reproduction or trended original cost or other evidence of "present value" of the physical property in arriving at a rate base.

**1. The Natural Gas Act does not provide either expressly or by necessary implication that the lowest just and reasonable rate which the Commission may fix is one which yields a reasonable return upon the "present value" of the physical property.**

The court below erroneously concluded that under the Natural Gas Act, the lowest just and reasonable rate which the Commission may fix is one which yields a reasonable return upon the "present value" of the physical property of the natural gas company. (IV R. 174-180.)

Sections 5(a) and 6(a) of the Natural Gas Act provide:

> Sec. 5(a) "(a) Whenever the Commission, after a hearing had upon its own motion or upon complaint of any State, municipality, State commission, or gas distributing company, shall find that any rate, charge, or classification demanded, observed, charged, or col-

lected by any natural-gas company in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, or that any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory, or preferential, the Commission shall determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force, and shall fix the same by order: *Provided, however,* That the Commission shall have no power to order any increase in any rate contained in the currently effective schedule of such natural gas company on file with the Commission, unless such increase is in accordance with a new schedule filed by such natural gas company; but the Commission may order a decrease where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates."

Sec. 6(a) "(a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property."

The statute manifestly does not provide that the lowest just and reasonable rate which the Commission may fix is one which yields a reasonable return upon the "present value" of the physical property of a natural gas company. Section 5(a) merely provides that the rates fixed by the Commission shall be just and reasonable. It sets up no standard beyond that. *Federal Power Commission v. Natural Gas Pipeline Company,* 315 U. S. 575 (1942) (concurring opinion of Black, Douglas and Murphy, *JJ.*, at page 606).

Section 6(a) does not require the Commission to determine present value. It does not require the Commission to determine prudent investment. It does not require the Commission to determine fair value. It does not require

the Commission to determine any rate base. The language of the section is wholly permissive. The Commission "may" investigate and ascertain the actual legitimate cost of the property of every natural gas company and depreciation therein. The Commission "may" ascertain and determine other facts only "when found necessary for rate-making purposes." In the absence of such a finding of necessity, the statute does not in terms even permit the Commission to ascertain and determine "other facts which bear on the determination of such cost or depreciation and the fair value of such property." This is the single plain meaning of the statute.

The legislative history of the companion section of the Federal Power Act, enacted as Section 208 of Title 2 of the Public Utility Act of 1935, supports and confirms this single plain meaning of Section 6(a) and Section 5(a) of the Natural Gas Act. In adopting the Federal Power Act, Congress rejected an amendment offered by Senator Bailey, requiring the use of "fair value" as the rate base. (79 Cong. Rec. 8858.) In adopting the Federal Power Act, Congress also rejected a draft which provided that in determining just and reasonable rates, the Commission shall fix a rate base "not in excess of the actual legitimate cost of the property used and useful for the service in question, less the depreciation therein." Section 208 of Title 2 of the Public Utility Act of 1935; Sec. 208 of S. 2796, 74th Cong. First Session; Senate Report No. 621, 74th Cong. First Session, p. 52; 79th Cong. Rec. 9065; Senate Report No. 621, 74th Cong. First Session, p. 20; House Report No. 1318, 74th Cong. First Session, p. 30. The legislative history thus supports the conclusion apparent on the face of the Natural Gas Act that Congress did not intend to impose upon the Federal Power Commission as a mandatory requirement the use of "present value" or any other rate base formula.

Even if the word "may" used in Section 6(a) of the Natural Gas Act were interpreted to mean "shall," the

statute could not be construed to require the Commission to base rates on "present value."

As the Special Committee of the Public Utility Law section of the American Bar Association said in its report to the annual meeting of the association in September, 1940 (1940 Report of the American Bar Association, pp. 14-15) (quoted in *City of Detroit v. Panhandle Eastern Pipe Line Company*, 45 P. U. R. (N. S.) 203 (September 23, 1942)):

> "It will be noted that the primary duty of the Commission under these two provisions (Fed. Power Act, Sec. 208, Natural Gas Act, Sec. 6) is to ascertain the cost of the property and the depreciation therein, and that 'other facts which bear on the determination of such cost or depreciation, and the fair value of such property' are to be determined only 'when found necessary for rate making purposes.' There is here the possible inference that the Congress, when it drafted this provision, was hopeful that the courts would decide that nothing other than the 'actual legitimate cost' of the property would be 'found necessary for rate making purposes.' However that may be it is patent that an accounting or cost rate base was dominant in the congressional mind, and that these very recent statutes in that respect are the very antithesis of some of the older state statutes which prescribe the reproduction cost new less depreciation formula."

Had Congress intended to impose upon the Federal Power Commission the "mischievous" doctrine of *Smyth v. Ames*, 169 U. S. 466, as developed into the doctrine of "present value," see *West v. Chesapeake and Potomac Telephone Company*, 295 U. S. 662 (1935) (Mr. Justice Roberts), as a matter of statutory requirement, the Congress surely would have at least used language such as it did use in Section 15a added to the Interstate Commerce Act by the Transportation Act, 1920, which had been held apt to that purpose. *St. Louis and O'Fallon Railroad Company v. United States*, 279 U. S. 461, 478, (1929) (Mr.

Justice McReynolds) (Brandeis, Holmes, and Stone, *JJ.*, dissenting).

Neither in the express words of the statute nor in its legislative history is there any support for the conclusion of the court below that the Natural Gas Act impliedly requires that the lowest just and reasonable rate which the Commission may fix is one which yields a reasonable return upon the "present value" of the physical property.

**2. Under the Natural Gas Act, the selection of an appropriate rate base is a matter of sound discretion for the Federal Power Commission.**

In *Federal Power Commission v. Natural Gas Pipeline Company*, 315 U. S. 575 (1942), Justices Black, Douglas and Murphy, concurring, said at page 606:

> "Yet it is important to note, as we have indicated, that Congress has merely provided in § 5 of the Natural Gas Act that the rates fixed by the Commission shall be 'just and reasonable.' It has provided no standard beyond that. Congress, to be sure, has provided for judicial review. But § 19(b) states that the 'finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive.' In view of these provisions, we do not think it is permissible for the courts to concern themselves with any issues as to the economic merits of a rate base. The Commission has a broad area of discretion for selection of an appropriate rate base. * * *"

The Natural Gas Act legislatively reflects the doctrine of administrative discretion urged by Mr. Justice Frankfurter, concurring, in *Driscoll v. Edison Light and Power Company*, 307 U. S. 104, 122 (1939), when he said:

> "* * * The determination of utility rates—what may fairly be exacted from the public and what is adequate to enlist enterprise—does not present questions of an essentially legal nature in the sense that legal education and lawyers' learning afford peculiar competence for their adjustment. These are matters for the applica-

tion of whatever knowledge economics and finance may bring to the practicalities of business enterprise. The only relevant function of law in dealing with this intersection of government and enterprise is to secure observance of those procedural safeguards in the exercise of legislative powers which are the historic foundations of due process."

In the case at bar, Dobie, Circuit Judge, dissenting below, said (IV R. 205):

> "A careful study of the Natural Gas Act (particularly the precise wording of Section 6) convinces me that Congress intended to give to the Federal Power Commission a wider latitude and a more extended discretion than had been given to any other federal board or commission under any previous statute in the field of rate making."

A mere standard of reasonableness, without the express requirement of a fair return on fair value, delegates to the Commission only a mediating administrative discretion, see *Freund, Administrative Powers over Persons and Property* (1928) p. 84; and in the Natural Gas Act, the discretion of the Commission is not even qualified by directing the consideration of specified factors.

The function of a rate base is to shed light upon the question of how much a utility will be allowed to earn. See *Group of Institutional Investors v. Chicago Railroad*, 318 U. S. 523, 540 (1943) (Mr. Justice Douglas).

Where the statute specifically authorizes the Commission to fix the lowest reasonable rate, as does the Act here involved (Natural Gas Act Sec. 5(a), *supra*, p. 4; *Federal Power Commission v. Natural Gas Pipeline Company*, 315 U. S. 575, 583 (Mr. Chief Justice Stone)), the Commission is at liberty to seek the lowest reasonable measure of a rate base as the limit below which the return can not go within the contemplation of reasonable men. Cf. Bentel, *Valuation as a Requirement of Due Process*, 43 Harvard L. R. 1249, 1253, note 14.

It is therefore respectfully submitted that under the Natural Gas Act, the selection of an appropriate rate base is a matter of sound discretion for the Commission. Cf. *Gray v. Powell*, 314 U. S. 402 (1941) (Mr. Justice Reed); *I. C. C. v. Illinois Central*, 215 U. S. 452, 477-478 (1910) (Mr. Justice White); and see *Brown, Fact and Law in Judicial Review*, 56 Harvard Law Review 899, 921-926 (1943).

**3. The Commission's selection of a rate base determined exclusively upon the basis of "prudent investment" measured by actual legitimate cost less the depreciation therein was a reasonable exercise of discretion.**

Actual legitimate cost less the depreciation therein is a recognized measure of prudent investment. 74th Congress 1st Sess. Senate Report No. 621, p. 52, Section 208 (May 13, 1935). *Re Canadian River Gas Company*, 43 P. U. R. (N. S.) 205 (F. P. C.) (1942); *Detroit v. Panhandle Eastern Pipe Line Company*, 45 P. U. R. (N. S.) 203 (F. P. C.) (1942); *Re Chicago District Electric Generating Corporation*, 39 P. U. R. (N. S.) 263 (F. P. C.) (1941); *Re Interstate Natural Gas Company* (F. P. C.) 48 P. U. R. (N. S.) 267 (1943); *Bonbright, Valuation of Property*, Vol. II, p. 1139.

Prudent investment has long been considered a reasonable measure of a rate base.

In *Boston and Worcester Railroad Corp. v. Western Railroad Corp.*, 80 Mass. 253, 260 (1859) (Merrick, *J.*), the Supreme Judicial Court of Massachusetts said:

> "* * * It would without doubt be reasonable that the proprietors of a railroad which had been judiciously located and prudently constructed and afterwards properly managed, should annually receive an aggregate sum for all the services of every kind performed by them, at least equal to legal interest upon the amount of their investment, after payment of all current expenses and charges necessarily incurred in preserving their road and its appendages from waste and

depreciation. It is easy to state, and to see the justice and equity of this general proposition."

In *Southwestern Bell Telephone Company v. Public Service Commission of Missouri*, 262 U. S. 276, Mr. Justice Brandeis, with whom Mr. Justice Holmes joined, concurring, said at pages 306-307:

> "The adoption of the amount prudently invested as the rate base and the amount of the capital charge as the measure of the rate of return would give definiteness to these two factors involved in rate controversies which are now shifting and treacherous, and which render the proceedings peculiarly burdensome and largely futile. Such measures offer a basis for decision which is certain and stable. The rate base would be ascertained as a fact; not determined as matter of opinion. It would not fluctuate with the market price of labor, or materials, or money. It would not change with hard times or shifting populations. It would not be distorted by the fickle and varying judgments of appraisers, commissions, or courts. It would, when once made in respect to any utility, be fixed, for all time, subject only to increases to represent additions to plant, after allowance for the depreciation included in the annual operating charges. The wild uncertainties of the present method of fixing the rate base under the so-called rule of *Smyth v. Ames* would be avoided; and likewise the fluctuations which introduce into the enterprise unnecessary elements of speculation, create useless expense, and impose upon the public a heavy, unnecessary burden."

On September 22, 1932, Governor Franklin D. Roosevelt said in an address on the subject of power control, delivered at Portland, Oregon, and broadcast to the nation (I Public Papers and Addresses of Franklin D. Roosevelt 727):

> "I seek to protect both the consumer and the investor. To that end I propose and advocate now, as I have proposed and advocated heretofore, the following remedies on the part of the government for the

regulation and control of public utilities engaged in the power business and companies and corporations relating thereto:

"'7. Abolishing by law the reproduction cost theory for rate making and establishing in place of (it) the actual money prudent investment principle as the basis of rate-making.'"

In *Federal Power Commission v. Natural Gas Pipeline Company of America*, 315 U. S. 575, Justices Black, Douglas and Murphy, concurring, said at pages 606-607:

"'* * * The requirements of 'just and reasonable' embrace, among other factors, two phases of the public interest: (1) the investor interest; (2) the consumer interest. The investor interest is adequately served if the utility is allowed the opportunity to earn the cost of the service. That cost has been defined by Mr. Justice Brandeis as follows: 'Cost includes not only operating expenses, but also capital charges. Capital charges cover the allowance, by way of interest, for the use of the capital, whatever the nature of the security issued therefor; the allowance for risk incurred; and enough more to attract capital.' *Southwestern Bell Telephone Co. v. Public Service Commission, supra*, 262 U. S. at p. 291. Irrespective of what the return may be on 'fair value,' if the rate permits the company to operate successfully and to attract capital all questions as to 'just and reasonable' are at an end so far as the investor interest is concerned. * * *'"

*In the Matter of Minnesota Power and Light Company*, Docket No. IT 5769, decided March 12, 1942, approximately two months before the decision in the instant case, the Federal Power Commission said:

"Reclassification and original cost studies are an essential aid to prosecution of the war effort in that they provide a sound basis for the most effective control of the prices of utility services entering into practically every important essential war activity as well as into the general cost of living. The availability of such regulation as a means of warding off the dangers

of inflation in this field apparently led the Congress specifically to exempt the control of public utility prices from the provisions of the Emergency Price Control Act of 1942."

In the instant case, Dobie, Circuit Judge, dissenting below, said (IV R. 203-204):

> "The Commission, in arriving at the proper rate-base, frankly and openly adopted the Prudent Investment Theory and paid no attention to the present value of the properties of Hope. Mr. Justice Brandeis, in his classic concurring opinion (Mr. Justice Holmes joined in the opinion) in *State of Missouri, ex rel. Southwestern Bell Telephone Co. v. Public Service Commission of Missouri*, 262 U. S. 276, has set forth, with his customary incisive clarity, the Prudent Investment Theory, together with the reasons for his belief in that theory. To my mind, the arguments he therein advances have never been convincingly refuted."

The Commission's selection of a rate base determined exclusively upon the basis of "prudent investment" measured by actual legitimate cost less the depreciation therein was a reasonable exercise of discretion. See also *Driscoll v. Edison Light and Power Company*, 307 U. S. 104, 122-123 (1939) (Mr. Justice Frankfurter concurring); *McCart v. Indianapolis Water Company*, 302 U. S. 419, 441 (1938) (Mr. Justice Black dissenting).

It is respectfully submitted that under the Natural Gas Act, as Justices Black, Douglas and Murphy, concurring, tersely stated in *Federal Power Commission v. Natural Gas Pipeline Company*, 315 U. S. 575, 606 (1942):

> "As we read the opinion of the Court, the Commission is now freed from the compulsion of admitting evidence on reproduction cost or of giving any weight to that element of 'fair value.' The Commission may now adopt, if it chooses, prudent investment as a rate base —the base long advocated by Mr. Justice Brandeis. And for the reasons stated by Mr. Justice Brandeis in

the *Southwestern Bell Telephone* case, there could be no constitutional objection if the Commission adhered to that formula and rejected all others."

**B. The Court of Appeals erred in holding that the Commission's findings of actual legitimate cost, the depreciation therein, the annual allowance for depreciation, and the dry hole as an operating expense of 1941, were not conclusive upon the court, since each of said findings has a rational basis and is supported by substantial evidence.**

In *American Gas and Electric Company v. Securities and Exchange Commission*, 134 F. (2d) 633, 641 (1943) (Rutledge, Associate Justice) (now Mr. Justice Rutledge); cert. den. 63 S. Ct. 1318, 87 L. Ed. 1165 (June 1, 1943), the court said in construing the Public Utility Holding Company Act of 1935:[1]

"* * * The judicial function is exhausted when there is found a rational basis for the conclusions of the Commission after a fair and adequate hearing. (*Rochester Telephone Corp. v. United States*, 1939, 307 U. S. 125, 146, 59 S. Ct. 754, 83 L. Ed. 1147; *Gray v. Powell*, 1941, 314 U. S. 402, 411, 62 S. Ct. 326, 86 L. Ed. 301; *Public Service Corp. of New Jersey v. Securities and Exchange Commission*, 3 Cir., 1942, 129 F. 2d 899, 903.) Although the initial burden is on petitioner to prove to the Commission that its management and policies are not subject to Bond and Share's 'controlling influence,' the Commission's function is to make an adequate and fair appraisal of the weight and credibility of the evidence. (*Detroit Edison Co. v. Securities and Exchange Commission*, 6 Cir., 1941, 119 F. 2d 730, 736; *Pacific Gas & Electric Co. v. Securities and Exchange Commission*, 9 Cir., 1942, 127 F. 2d 378, 382; *Public Service Corp. of New Jersey v. Securities*

[1] Sec. 24(a) 15 U. S. C. Sec. 79x of the Public Utility Holding Company Act of 1935, like Sec. 19(b) of the Natural Gas Act, provides that "the finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive."

*and Exchange Commission*, 3 Cir., 1942, 129 F. 2d 899, 902. The Commission, like other expert agencies dealing with specialized fields, has the function of appraising conflicting and circumstantial evidence and the weight and credibility of testimony. *National Labor Relations Board v. Link-Belt Co.*, 1941, 311 U. S. 584, 597, 61 S. Ct. 358, 85 L. Ed. 368; *Rochester Telephone Corp. v. United States*, 1939, 307 U. S. 125, 146, 59 S. Ct. 754, 83 L. Ed. 1147.)"

**1. The Commission's finding of actual legitimate cost has a rational basis and is supported by substantial evidence.**

It was not irrational for the Commission to adopt after extensive investigation substantially the investment shown by the respondent's books as the actual investment which the owner had made to establish the business, and to reject the respondent's attempt to write up the investment by about $17,000,000 which the evidence showed had already been recouped from the public as a day to day cost of operating the business.

The Commission reasonably adopted the investment substantially as shown by the respondent's books.

The books of a corporation are ordinarily prima facie evidence of the investment which the owners have made. This rule arises from the fact that the investment spread upon the books of a corporation, particularly in the public utility field, is not put there merely as the hobby of an eccentric. The rule arises from the known fact that the books of a corporation, even a subsidiary corporation like the Hope Company, show the investment as a basis of day to day decisions of management, as a basis of reports to tax authorities, as a basis of reports to regulatory commissions, and as a record for the information of the public and its government generally. (I R. 260, 253; II R. 173-175.) The books of a public utility corporation are ordinarily prima facie evidence of the facts set forth therein. *Newton v. Consolidated Gas Company*, 258 U. S. 165, 176 (1922) (Mr. Justice McReynolds).

The extensive investigation of the books and supporting vouchers of the respondent by the Commission's staff confirmed the rule that the respondent's books show prima facie the investment the owner has made in establishing the business. From October of 1938 to February of 1941, the Federal Power Commission's staff conducted an extensive investigation of the books, records, and vouchers of the respondent, after which it concluded that the books correctly show the investment the owner has made to establish the business, except for one accounting error amounting to approximately $1,300,000, which the Commission corrected. (III R. 25-39; I R. 35.) The Commission's conclusion that the investment in the respondent's property devoted to interstate business is substantially that shown by the books (I R. 23) is not merely sustained by the prima facie evidence rule attaching to book figures of a corporation such as respondent; but is also supported by substantial testimony.

The Commission rationally rejected the respondent's attempt to write up the investment by about $17,000,000 which the evidence showed was a cost of the day to day operation of the business which had long since been recouped from the public.

The respondent complains that the Commission did not add to the investment substantially as shown by the books a further sum of approximately $17,000,000 for well drilling expenses prior to 1923, overheads, and miscellaneous items, which the respondent had always hitherto treated as a cost of operating the business. It appears that the Federal Power Commission reasonably rejected this claim and that its conclusion is supported by substantial evidence.

The respondent's management has always treated the items of well drilling expenses prior to 1923, overheads, and other miscellaneous items as day to day costs of operating the business, and not as an investment which the

owner had made in establishing the business. Mr. Joseph C. Chisler, Vice President, Treasurer, director and chief accounting officer of the Hope company, and a responsible member of the management, testified that the items aggregating $17,000,000 previously charged to operating expenses and now sought to be included in the investment, were charged to operating expense accounts either pursuant to a code of accounts or in the exercise of managerial discretion. (II R. 172-173.) Mr. Chisler said that the respondent had an option in respect to the treatment of well construction costs and made an election and charged such costs to operating expense. (II R. 173.) He stated that the accounting officers of the respondent had all been competent men. (II R. 173.) Chisler also testified that the charging of well construction costs to operating expenses from the beginning of operations until 1923 was in accordance with accounting principles followed at that time and which had been followed by oil companies. (II R. 174.) He stated that under federal income tax regulations, the respondent could also elect to treat well construction costs either as operating expense or capital, and that it had elected to treat them as operating expense. (II R. 176.) It is a matter of public record that in 1921 the respondent claimed and the West Virginia Commission held that well drilling expenditures constituted at that time and in that stage of the industry a cost of operating the business and not an investment which the owner had made for the purpose of establishing the business. *Re Hope Natural Gas Company*, P. U. R. 1921 E, 418, 439-440. In fact, down to the very day of the commencement of the present controversy, the responsible managerial and accounting officers of the Hope Natural Gas Company had written these early well drilling costs, overheads, and other miscellaneous items off as operating expense, and it is difficult to understand by what legerdemain these costs of operation have suddenly been transmuted into an owner's investment.

The Commission found that the expensed items had been recouped through revenues from Hope's customers (I R. 28) and this finding is supported by substantial evidence. (I R. 34; III R. 13-14, years 1898-1923.)

The Commission's chief accountant testified that it would be unjust and inequitable to the public to permit this gas company, which has once recouped these operating costs through revenue from rates, now to include those same expenditures in the investment so that the customers must again pay these costs to the utility in the guise of a return of the investment through depreciation and depletion allowances in addition to paying a return upon these past operating expenses for years to come. Mr. Charles W. Smith, Chief of the Bureau of Accounts, Finance and Rates of the Federal Power Commission, and a nationally known authority on public utility accounting (I R. 225-227), testified that it would be unjust and inequitable to the public to permit items previously charged to operating expenses under the allowable discretion of management and without accounting error to be later included in the base upon which customers are required to pay a return and depletion and depreciation allowances. Mr. Smith said (I R. 305-306):

> "Q. If the company were permitted to capitalize retroactively items which it had formerly expensed, in a rate case, would not multiple charges against the consumers result?
>
> (Objection overruled.)
>
> The Witness: It would be purely a question of fact. If they are allowed as expenses and then put in plant and allowed again, of course, there is duplication."

The decided cases hold that once the management without accounting error decides to treat an item as a cost of operation, it remains a cost of operating the business and not an investment that the owners have made for the purpose of establishing the business in spite of later changes in

accounting practice or management election, which can operate only for the future. *Peoples Gas Light and Coke Company v. Slattery*, 373 Ill. 31, 51, 25 N. E. (2d) 482, 493, 31 P. U. R. (N. S.) 193, 207; App. Dismissed 309 U. S. 634; *Los Angeles Gas and Electric Corporation v. Railroad Commission of California*, 58 F. (2d) 256, 260, P. U. R. 1932 C, 397, 404, aff'd. 289 U. S. 287; *Natural Gas Company of West Virginia v. Public Service Commission*, 95 W. Va. 557, 570-572, 121 S. E. 716, 720, P. U. R. 1924 D, 346, 357-361; and see *Federal Power Commission v. Natural Gas Pipeline Company*, 315 U. S. 575, 589 (1942).

On behalf of the gas consumers in Cleveland who would ultimately be required to pay higher rates to the affiliated East Ohio Gas Company for the unjust enrichment of the respondent Hope Natural Gas Company if the Federal Power Commission had held otherwise, petitioner respectfully submits that the Federal Power Commission acted properly in rejecting the respondent's attempt to inflate for rate case purposes the investment which its management had long recognized and spread upon its books as the actual investment.

The presumption, supported by testimony of both the respondent's management and the public accounting authorities establishing that the respondent's books substantially show the investment made by the owner, was not overthrown by the testimony of an engineer who undertook to inflate the utility's investment under the guise of reaccounting as capital for items charged to day to day cost of operation in the past. The respondent presented no independent accounting witness to testify that these 17 millions of dollars of intangible well drilling expenditures, overheads, and miscellaneous items are an investment of the owner of the property. Instead, the respondent presented in support of its rate case claim an engineer, who devoted 400 volumes of working papers to the alchemy of transmuting what the management had always treated as

operating expenses into investment for rate case purposes. (Antonelli, Tr. 1425.) But, being an honest man, Mr. Antonelli was finally forced to admit under cross examination by Mr. Slaff of Federal Power Commission counsel that it is improper to capitalize items which have previously been expensed by the respondent, exercising its discretion under a controlling system of accounts. He said (IV R. 326-327):

"By Mr. Slaff:

Q. I see. Then I understand your present testimony to mean that you consider it improper to capitalize items which have previously been expensed by the company exercising its discretion under a controlling system of accounts, is that correct? (Objection overruled.)

• • •

A. Yes, sir.

By Mr. Slaff:

Q. And that applies, of course, not only to the specific account that we were discussing, but throughout?

Mr. Milde: Same objection.

By Mr. Slaff:

Q. I mean, you weren't confining that to a specific account, were you?

Mr. Milde: Same objection.

Trial Examiner: Objection overruled.

A. No, sir."

With that admission by the respondent's witness, the respondent's case for inflating its investment by $17,000,000 of items previously recouped from the public as costs of day to day operation of the business collapsed.

Dobie, Circuit Judge, dissenting below, said on this branch of the case (IV R. 205, 206-207):

"Further, I think that the methods adopted by the Commission under the Prudent Investment Theory, in

arriving at a rate-base in the instant case, were neither fanciful nor arbitrary. It seems to me, too, that there was substantial evidence to support the opposite findings of the Commission.

• • •

The Commission refused to allow as capital the amount of drilling cost which Hope had in the past charged to operating expenses. The Commission found (and I think this finding is supported by the evidence) that these costs had been considered by Hope in fixing its rates in previous years and that these costs had already been paid by the consumers. On this ground, the Commission declined to include these costs in arriving at the rate-base.

It was the practice of Hope, prior to 1923, to charge well-drilling costs to operating expenses rather than to capital account. In so doing, Hope seems to have followed the then general procedure of the natural gas industry. It changed this practice under a requirement of the Public Service Commission of West Virginia. The present system of accounting prescribed by the Federal Power Commission also follows the West Virginia practice. It is my considered opinion that the present procedure is the proper one.

It is to be noted that this is not a mere mathematical error in book-keeping, which of course, should be corrected. It is rather an accounting policy. It does not seem to me to be vital whether the decision of the Commission here is based upon technical estoppel, equity or fair dealing. And once more, I think the Commission should be here sustained. Under its present claim, Hope seeks to impeach its books, which were competently kept for a long period of years under the older method. And Hope itself, in a previous rate case before the Public Service Commission of West Virginia, claimed these well-drilling costs as operating expenses, its contention was allowed, and its rates were fixed accordingly.

The holding of the Commission here is sustained by the great weight of authority. In the Commission's brief, these authorities are set out at great length, and include decisions of federal courts, decisions of state

courts, and decisions of State Utility Commissions. Quite striking here, I think, is an extract from the majority opinion in the recent *Natural Pipe Line* case (315 U. S. at pages 590, 591):

"Here the companies, though unregulated, always treated their entire original investment, together with subsequent additions, as capital on which profit was to be earned. They charged the out-of-pocket cost of maintenance of plant, whether used to capacity or not, as operating expenses deductible from earnings before arriving at net profits. *They have thus treated the items now sought to be capitalized in the rate base as operating expenses to be compensated from earnings, as in the case of regulated companies.* * * * *We cannot say that the Commission has deprived the companies of their property by refusing to permit them to earn for the future a fair return and amortization on the costs of maintenance of initial excess capacity—costs which the companies fail to show have not already been recouped from earnings before computing the substantial "net profits" earned during the first seven years.'* (Italics ours.)"

It is respectfully submitted that the Commission's findings of actual legitimate cost has a rational basis and is supported by substantial evidence.

**2. The Commission's finding as to the depreciation in the actual legitimate cost has a rational basis and is supported by substantial evidence.**

There is no inconsistency between the Commission's method of determining the investment and its method of determining the depreciation in the investment. The Commission adopted substantially the book investment, because it found after extensive investigation, that the books stated the investment without serious accounting error. It rejected the book figures for depreciation in the investment because the Commission's investigation and the testimony of the respondent's witnesses showed that

the book reserve for depreciation was shot through with error, having been built up by charging to operating expenses over the years excessive amounts of annual depreciation. (III R. 176; II R. 399; I R. 40.) Were that not so, as it is, the respondent could hardly be heard to complain, for the Commission's method of determining depreciation in the investment results in depreciating the original investment about $25,000,000 less than if the respondent's own book depreciation accruals had been adopted as the measure of the depreciation in the investment. (I R. 46; I R. 86.)

The Commission's method was apt for the purpose of determining the depreciation in the investment.

The Commission's method for determining depreciation and depletion in the investment pursuant to the Natural Gas Act, Section 6(a) as of December 31, 1940 is explained as follows in the Commission's Opinion (I R. 45):

> "The required depletion and depreciation reserve, as we have determined it upon the record, is the best evidence of the measure of actual existing depletion and depreciation, and it will be deducted from the actual legitimate cost of the Company's property for rate-making. The reserve requirement on any selected date is the total of the annual provisions for depletion and depreciation less the actual retirements of property. The method used here determines the amount required annually to reimburse the Company for property consumed in service, and it results in a correlation of the annual expense and the accumulated reserve. The method is just and consistent for each operating period because the costs utilized are matched with the revenues produced by the property in service."

The economic service life method is a recognized method of determining depreciation in the investment and the annual allowance for depreciation or return of the investment.

The method used by the Commission in this case produces substantially the same result as the method which the Commission used and this Court approved in *Federal Power Commission v. Natural Gas Pipeline Company*, 315 U. S. 575, 593-595 (1942). In the *Natural Gas Pipeline Company* case, the Commission employed the sinking fund method of providing for annual amortization or depreciation allowances, and used as the interest attributable to the fund in the calculation the same interest rate as the rate of return. The use of the sinking fund formula with the same rate of interest as the rate of return has substantially the same effect as a straight-line annual allowance coupled with a rate base deduction for depreciation equivalent to the ratio of the expired service life of the property to the total service life of the property. See *Public Utilities Commission of District of Columbia v. Capital Traction Company*, 17 F. (2d) 673, 676 (District of Columbia Court of Appeals); *Re Duluth Street Railway Company*, P. U. R. 1923 D, 705, 737-738 (Wisconsin Commission).

For example, in the *Natural Gas Pipeline* case, the expired service life was approximately one-third of the assumed overall service life. The use of the sinking fund formula by the Federal Power Commission in that case was equivalent to the use of a straight line annual allowance for depreciation in operating expenses coupled with deduction of a depreciation of one-third of the amount of the original investment in the property. Therefore, the use of the sinking fund formula by the Commission in the *Natural Gas Pipeline Company* case was similar to what the Commission did in the instant case, where the Commission made a straight line annual allowance in operating expenses, while at the same time deducting from the original investment depreciation in proportion to the relation that the expired service life bears to the total service life, or about 43 per cent. The decision of this Court affirming

the Federal Power Commission's decision in the *Natural Gas Pipeline* case is therefore a square precedent for affirmance in the instant case.

Both methods harmonize the deduction for depreciation in the investment, express or implied, with the annual allowance for depreciation in the investment. The fact that the Commission used the sinking fund formula instead of the straight line method in the *Natural Gas Pipeline* case should not obscure the fact that this Court's affirmance in the *Natural Gas Pipeline* case applies with equal force to the deduction of the reserve requirement from the original investment where, as here, an annual allowance based on the straight line method is made. This Court said in the *Natural Gas Pipeline* case that "The companies are not deprived of property by a requirement that they credit in the amortization account so much of the earnings received during the prior period as are appropriately allocable to it for amortization." (315 U. S. 575, 595.) So here, the respondent is not deprived of property by the finding of the Commission that a proper depreciation in the investment is that proportion of the investment which the expired service life bears to the total service life.

The Commission's finding of depreciation was supported by substantial evidence.

In arriving at its determination of the depreciation in the investment in the instant case, the Commission properly relied on its engineers to determine the ultimate composite service life of the investment. (III R. 151.) And it properly relied upon its accountants to determine how much of the ultimate service life of the investment had already been used up in the public service. (III R. 175.)

The lower court erroneously stated that in determining the actual existing or accrued depletion and depreciation the Commission failed to take into account "the present condition of the property." (Majority Opinion, IV R. 189.) In making these determinations the Commission was in

fact guided by a study conducted by a qualified staff engineer, who made a field inspection of the Company's physical properties to aid in the determination of service lives. (I R. 42; III R. 157-158.)

The Commission's straight-line service-life method of determining depreciation in the investment represents its judgment as an experienced administrative body as to the consumption of capital, on a cost basis, according to the method which spreads the loss over the respective service periods. See *Lindheimer v. Illinois Bell Telephone Company*, 292 U. S. 151, 169 (1934).

The majority below complained that the net investment in certain accounts found by the Commission is less than gross salvage value. (IV R. 189.)

In the first place, it is wholly improper to compare the net investment found by the Commission for these accounts with the alleged gross salvage value. Any proper comparison should be with the net salvage value. The negative salvage, i.e., the cost of removal or abandonment and delivery for sale of certain items of utility property may be and sometimes is greater than the gross salvage value, or what the item could be sold for. The respondent's witness Rhodes himself used net salvage value in arriving at his estimated claimed net value of the property. (II R. 422.) The unfairness and gross impropriety of comparing the Commission's net investment of well equipment, for example, with the gross salvage value of well equipment is emphasized by the fact that the respondent's witness Rhodes estimated a lower net value for well equipment than his gross salvage value of 65 per cent, to wit 56 per cent. (I R. 369.)

Finally, Hope's claimed "gross salvage" percentages do not represent the ultimate salvage from retirements of equipment at the end of its useful life, but are inflated by the inclusion of so-called warehouse recoveries which are transfers of reusable equipment from plant to the ware-

house at full book cost. Respondent's witness Rhodes recognized this fact and, in determining the gross salvage of gas well equipment, made an adjustment purporting to correct for it, although he merely estimated, from some inspection, that reuseable gas well equipment returned to the warehouse had depreciated 12 per cent and, instead of eliminating from the calculation the equipment that was to be reused, he merely made a minor reduction. (I R. 469-470.) The effect of the inclusion of reuseable equipment in the calculation of per cent salvage is demonstrated by a comparison of the gross salvage from gas well equipment that could no longer be used or was abandoned of about 33 per cent (11 per cent salvage from 34 per cent of equipment, I R. 469-470) with the 65 per cent determined by including reuseable equipment, even though the minor adjustment for observed depreciation in the reuseable equipment had been made. In comparing the Commission's net investment in field line and compressor station equipment with the alleged gross salvage figures, the respondent makes no adjustment even for the depreciated condition of reuseable equipment. (I R. 470-471.)

The respondent's attempted comparison of the Commission's *net* investment in well equipment, field line pipe, and compressor station equipment with the claimed *gross* salvage value of these items, which apparently impressed the majority below, is wholly meaningless.

It is respectfully submitted that the method used by the Commission was apt for the purpose of determining the depreciation in the investment, and that the Commission's finding of depreciation was supported by substantial evidence.

After carefully examining the record, Dobie, Circuit Judge, dissenting in the court below, said on this branch of the case (IV R. 205):

> "In computing depreciation and depletion, the Commission employed the Economic Life Service Method.

This formula has long been known to, and has been frequently applied by, economists and accountants. It seems to have been often used in connection with depreciation under the federal income tax. I cannot find in this formula any active germs of constitutional invalidity, as it is applied to the instant case.

"The Commission based its determination of existing depletion and depreciation upon actual legitimate cost of the properties of Hope. An apparently competent engineer inspected this property to obtain information that would serve as a guide for estimating the property's service life and the amount of money required annually to reimburse Hope for so much of this property as might be consumed in rendering service to the public.

"Incidentally, the amount deducted by the Commission fell short by many millions of dollars of the amount accrued and set up by Hope for depreciation and depletion. In his partially dissenting opinion Commissioner Scott expressed the view that the Commission had been, in fixing the amount for depreciation and depletion, far too lenient with Hope.

"Again I feel that there was substantial evidence to sustain the Commission's findings under a formula which was neither unrealistic nor capricious."

It is respectfully submitted that the Commission's finding as to the depreciation in the actual legitimate cost has a rational basis and is supported by substantial evidence.

### 3. The Commission's finding as to the annual allowance for depreciation has a rational basis and is supported by substantial evidence.

Here the question is whether in a wasting asset business annual allowances for depreciation and depletion may be based upon investment rather than upon reproduction cost. That question has quite recently been decided in favor of the investment base as against the reproduction cost

base by this Court. *Federal Power Commission v. Natural Gas Pipeline Company*, 315 U. S. 575, 593 (1942). In a wasting asset business, any scheme of depreciation allowance which will restore the capital investment by the end of its useful life involves no injustice. The Commission's annual allowance for depreciation restores from current earnings the amount of service capacity of the investment consumed in each year, which is reasonable. See *Lindheimer v. Illinois Bell Telephone Company*, 292 U. S. 151, 167. Had the Commission allowed depreciation and depletion on the theoretical reproduction cost of well drilling expenses, overheads and other intangible items previously recovered as operational costs, items in which the owners have made no investment, as the court below held it should have done, the depreciation and depletion allowance would not be the computation of a proper expense, but instead the allowance of additional profit over and above a fair return.

The respondent complained that "by omitting 2600 wells and thousands of other property items actually in service from its 'adjusted book cost' the Commission treats them as nonexistent or in zero per cent condition" and makes no allowance therefor by way of annual depletion. (IV R. 25.) Of course, the Commission did not omit 2600 wells from the investment. Its determination of the investment includes the investment in materials in all the 3300 wells of the respondent. The investment does not include well drilling expenses for certain of the wells because the respondent prior to 1923 elected to treat drilling expenses as costs of operating the business and recovered those costs currently from the public through revenues. The Commission properly did not allow any depletion on the drilling expenses for these wells, because the owner has made no investment in these drilling expenses for the purpose of establishing the business.

It is respectfully submitted that the Commission's finding as to the annual allowance for depreciation has a rational basis and is supported by substantial evidence.

**4. The Commission's finding that the deep test dry hole is an operating expense in 1941, when it was booked, has a rational basis and is supported by substantial evidence, and even if there were error on the part of the Commission in not treating the said dry hole as an operating expense of 1940, the error is harmless.**

The lower court approved the respondent's claim for an increase in the Commission's allowance for exploration and development costs upon the ground that it should be allowed $165,000 more for dry hole expense than the books showed it spent in 1940. (IV R. 198.) As a matter of fact, the Commission in fixing future rates allowed the respondent $192,000 more for exploration and development expense than the books showed it actually spent in 1940 without making any allowance for the known upward trend in gross sales and revenues. (I R. 70.) But laying to one side the fact that the respondent's claim for dry hole expense is academic so far as the reasonableness of the Commission's rate order is concerned, the lower court's suggestion that dry hole expense booked in 1941 should be treated as a 1940 expense because the money was spent in that year is wholly impractical and unreasonable. (IV R. 198.) Upon the lower court's theory, many expense items booked in 1940 would have to be treated as expenses of 1939 when the money was spent, and many expenses booked in 1939 would have to be treated as operating expenses of 1938 when the money was spent, and this would force a complete reaccounting of the book operating expenses back through the years with no proof that such a reaccounting would produce overall any substantial change in the allowable operating expenses for 1940. This the Commission was not required to do. The Commission's

finding as to dry hole expense has a rational basis and is supported by substantial evidence.

It is respectfully submitted that the Court of Appeals erred in holding that the Commission's findings of actual legitimate cost, the depreciation therein, the annual allowance for depreciation, and the dry hole as an operating expense of 1941, were not conclusive upon the court since each of said findings has a rational basis and is supported by substantial evidence.

Since the Court of Appeals erred in holding that for rate-making purposes under the Natural Gas Act, the Commission is not authorized to use a rate base determined exclusively upon the basis of "prudent investment" measured by actual legitimate cost less depreciation, but that it must use a rate base which reflects estimates of the extent and effect of post investment fluctuations in labor and material prices, and since the Court of Appeals erred in holding that the Commission's findings of actual legitimate cost, the depreciation therein, the annual allowance for depreciation, and the dry hole as an operating expense of 1941, were not conclusive upon the court since each of said findings has a rational basis and is supported by substantial evidence, therefore it is respectfully submitted that the Court of Appeals erred in setting aside the Federal Power Commission's "Order Reducing Rates," for the reason that said order is authorized by the Natural Gas Act, and is based upon findings which have a rational basis and are supported by substantial evidence.

## III.

**EVEN IF THERE WERE A CONSTITUTIONAL QUESTION INVOLVED, AS THERE IS NOT, THE COURT OF APPEALS FURTHER ERRED IN SETTING ASIDE THE FEDERAL POWER COMMISSION'S "ORDER REDUCING RATES" FOR THE REASON THAT IN THE ABSENCE OF AN EXERCISE OF THE POWER OF EMINENT DOMAIN OR OTHER DIRECT APPROPRIATION OF PROPERTY FOR THE USE OF THE UNITED STATES GOVERNMENT, RESPONDENT WAS NOT ENTITLED UNDER THE FIFTH AMENDMENT TO ANYTHING MORE THAN DUE PROCESS OF LAW.**

The Commission's "Order Reducing Rates" was made within the ambit of the Commission's statutory authority. A fair hearing was given. Proper findings were made. Nothing arbitrary was done by the Commission. Respondent was accorded due process of law.

Upon these facts, the court below plainly erred in holding that the Commission's "Order Reducing Rates" results in confiscation of respondent's property contrary to the Fifth Amendment because it does not purport to give respondent a return upon the "present value" of respondent's physical property, in addition to due process of law.

The clause of the Fifth Amendment which forbids a taking of private property for public use without just compensation applies where the Federal Government attempts to exercise the power of eminent domain or otherwise makes a direct appropriation of private property for the use of the Government, *Pumpelly v. Green Bay Canal Company*, 13 Wall. 166 (1871); *United States v. Lynah*, 188 U. S. 444 (1902); *United States v. Cress*, 243 U. S. 316 (1916); *Jacobs v. United States*, 290 U. S. 13 (1933), but does not apply where, as here, there is a mere regulation of the use of the property under the Commerce clause or other granted power for the protection and promotion of the welfare of the economy. *Legal Tender Cases*, 12 Wall. 457, 551 (1872) (Mr. Justice Strong); *Morrisdale Coal Co.*

*v. United States*, 259 U. S. 188, 190 (1922) (Mr. Justice Holmes); see *Henderson v. Bryan*, 46 F. Supp. 682, 685 (S. D. Cal.) (1942) (Harrison, *J.*).

The clause of the Fifth Amendment which forbids deprivation of property of any person without due process of law does not forbid all deprivation of property, which would destroy the power to regulate, but only forbids a deprivation of property without due process of law. *United States v. Darby*, 312 U. S. 100, 125-126 (1941) (Mr. Justice Stone); *Federal Power Commission v. Natural Gas Pipeline Company*, 315 U. S. 575, 586 (1942) (Mr. Chief Justice Stone); and see *North American Company v. Securities and Exchange Commission*, 133 F. (2d) 148, 154 (C. C. A. 2) (1943) (Swan, *J.*); Cf. *Driscoll v. Edison Light and Power Company*, 307 U. S. 104, 122 (1939). (Mr. Justice Frankfurter, concurring.)

Regulation of the rates of a natural gas company under the commerce power is not the same as condemning private property for public use without paying just compensation. If regulation of natural gas rates under the commerce power were to be construed as a taking of private property for public use within the meaning of the Fifth Amendment, there would be an implied contract on the part of the Federal Government to pay to the respondent the value of the property so appropriated for public use. *United States v. Lynah*, 188 U. S. 445, 464-465 (1903); *Henderson v. Bryan*, 46 F. Supp. 682, 685 (D. C. Cal.) (1942). It may be conceded that when the Federal Power Commission's order was made, upon a date several months after Pearl Harbor, the Federal Government had a right, as it still has, to requisition respondent's property, the use of respondent's property, or respondent's product for public use for the war purpose of combating inflation or for any other war purpose. Constitution of the United States, Article I, Sec. 8, cl. 11-16, Article II; Second War Powers Act, 1942 (effective March 27, 1942), Title II, 56 Stat. 177, 50 U. S. C. A. App. Sec. 632; Executive Order No. 9328,

par. 4, 8 F. R. 4681 (April 8, 1943); *Highland v. Russell Car Company*, 279 U. S. 253, 261-262 (1929) (Mr. Justice Butler); see Franklin, War Powers of the President, 17 *Tulane L. R.* 217 (1942). "But a liability in any case is not to be imposed upon a government without clear words." See *Pine Hill Coal Company, Inc. v. United States*, 259 U. S. 191, 196 (1922) (Mr. Justice Holmes). And the clause of the Fifth Amendment which requires just compensation for a taking of private property for public use simply does not apply to a regulation of the use of property under the commerce clause for the general welfare, such as the Natural Gas Act, or an order made pursuant thereto.

In cases involving federal regulations of the use of property under the commerce power, the Fifth Amendment guarantees only due process of law, and does not provide for a return on or of the present or condemnation value of the physical property, in addition to due process of law.

That is what we understand this Court to have meant in *Federal Power Commission v. Natural Gas Pipeline Company*, 315 U. S. 575, 586 (Mr. Chief Justice Stone), where the Court said:

> "The Constitution does not bind rate-making bodies to the service of any single formula or combination of formulas. Agencies to whom this legislative power has been delegated are free, within the ambit of their statutory authority, to make the pragmatic adjustments which may be called for by particular circumstances. Once a fair hearing has been given, proper findings made and other statutory requirements satisfied, the courts cannot intervene in the absence of a clear showing that the limits of due process have been overstepped. If the Commission's order, as applied to the facts before it and viewed in its entirety, produces no arbitrary result, our inquiry is at an end."

And that is what the concurring justices apparently understood the decision of this Court to mean in *Federal*

*Power Commission v. Natural Gas Pipeline Company*, 315 U. S. 575 (1942), (Justices Black, Douglas and Murphy, concurring, at page 606), when they said:

> "As we read the opinion of the Court, the Commission is now freed from the compulsion of admitting evidence on reproduction cost or of giving any weight to that element of 'fair value.' The Commission may now adopt, if it chooses, prudent investment as a rate base—the base long advocated by Mr. Justice Brandeis. And for the reasons stated by Mr. Justice Brandeis in the *Southwestern Bell Telephone* case, there could be no constitutional objection if the Commission adhered to that formula and rejected all others."

It is respectfully submitted that even if there were a constitutional question involved, as there is not, the Court of Appeals further erred in setting aside the Federal Power Commission's "Order Reducing Rates" for the reason that in the absence of an exercise of the power of eminent domain or other direct appropriation of property for the use of the United States Government, respondent was not entitled under the Fifth Amendment to anything more than due process of law.

## IV.

**THE COURT OF APPEALS ERRED IN HOLDING THAT THE FEDERAL POWER COMMISSION HAS NO JURISDICTION TO DETERMINE THE LAWFUL RATES FOR INTERSTATE SALES OF NATURAL GAS AT WHOLESALE AFTER THE EFFECTIVE DATE OF THE NATURAL GAS ACT OF 1938 AND PRIOR TO THE ISSUANCE OF A COMMISSION RATE-FIXING ORDER, FOR THE REASON THAT SAID JURISDICTION IS IMPLIED FROM EXPRESSLY GRANTED POWERS, AND IS SUPPORTED BY THE LEGISLATIVE HISTORY OF THE STATUTE.**

The Federal Power Commission's ultimate "Findings as to Lawfulness of Past Rates" are (I R. 12-13):

> "(23) Cost, conditions and characteristics of service show that the just, reasonable and lawful rates for natural gas sold by Hope Natural Gas Company in interstate commerce to The East Ohio Gas Company for resale for ultimate public consumption were those required to produce compensation in the amount of $11,528,608 for 1939, $11,507,185 for 1940, and $11,910,947 annually since 1940;
>
> "(24) The rates charged and received by the Hope Natural Gas Company for the transportation and sale of natural gas in interstate commerce to The East Ohio Gas Company for resale for ultimate public consumption were unjust, unreasonable, excessive, and therefore unlawful to the extent of $830,892 during 1939, $3,219,551 during 1940, and $2,815,789 on an annual basis since 1940."

In support of its jurisdiction to make these findings, the Commission said in its opinion (I R. 67-69):

> "In 1938 the Cities of Cleveland and Akron, Ohio, filed complaints with the Federal Power Commission alleging that the rate which Hope charged East Ohio Gas Company was unjust, unreasonable and unlawful. These complaints were registered before Hope filed its five interstate wholesale rate schedules which are involved in these proceedings. The acceptance of a rate schedule for filing does not mean that the Com-

mission approves it, and does not establish the justness or reasonableness of the rate. *Re Home Gas Co.*, 39 P. U. R. (N. S.) 102, 109. On October 14, 1938, this Commission instituted an investigation of the reasonableness of all of Hope's interstate rates. If it had been possible to adduce the volume of evidence required for the disposition of such a complex matter within a few months, the Commission would have prescribed the reasonable interstate wholesale rates for 1939 and subsequent years. The City of Cleveland raised the issue of the lawfulness of the rate charged by Hope to the East Ohio Gas Company and asked this Commission as an aid to State regulation, to make a separate determination of the reasonable rates since June 30, 1939. Originally the City of Cleveland requested this Commission to find the lawful Hope-East Ohio rates since June 21, 1938, but it now represents that the subject is idle for rates prior to June 30, 1939, because those rates which Cleveland consumers were obligated to pay East Ohio have been settled. The Commission does not have the authority to fix rates for the past and to award reparations. But Congress did empower and instruct the Commission in Section 5(a) of the Natural Gas Act to fix future rates, and as a step in that process we must necessarily consider the reasonableness of past and existing rates. When the issue is raised and the public interest will be served, we consider as a necessary part of that duty the power to examine the entire rate problem involved and to determine what rates were lawful in the past. Also, Section 14(a) of the Act authorizes the Commission to investigate any facts which it finds necessary in order to determine whether Hope has violated any provision of the Natural Gas Act. Furthermore, the Commission has power to perform any act, pursuant to Section 16, which is necessary or appropriate to carry out the provisions of the Act. Under Section 4(a) of the Act any interstate wholesale rate that is not just and reasonable is unlawful. *Federal Power Commission v. Natural Gas Pipeline Co.*, 315 U. S. ..... Hope's rate collected from East Ohio Gas Company was lawful after June 21, 1938, the effective date of the Act, only to the extent that it was just and reason-

able. The City of Cleveland states that the Ohio Commission is investigating the reasonableness of the East Ohio Gas Company's bonded retail rates in Cleveland for the period since June 30, 1939, and that the lawfulness of Hope's rate is an important factor in the case. Since the enactment of the 1938 Natural Gas Act this Commission has had exclusive jurisdiction to determine the lawfulness of the interstate wholesale rates charged by Hope and other natural gas companies. (Sections 1, 2, 4 and 5(a). See *Missouri v. Kansas Natural Gas Co.*, 265 U. S. 298, 308; *Illinois Natural Gas Co. v. Central Illinois Public Service Co.*, 314 U. S. 498, 506; *Kentucky Nat. Gas Corp. v. P. S. C.*, 28 F. Supp. 509, 513, aff. 119 Fed. (2d) 417.)

"In response to the request of the City of Cleveland, the Commission will make the appropriate findings of fact as to the lawfulness of the rates charged East Ohio by Hope since June 30, 1939. The Interstate Commerce Commission has furnished precedents for the performance of this public duty. (*W. A. Barrows Porcelain Enamel Co. v. Cushman Motor Delivery Co.*, 11 M. C. C. 365, 366; *Dixie Mercerizing Co. v. ET & WNC Motor Transp. Co.*, 21 M. C. C. 491, 492. See: *United States v. Morgan*, 307 U. S. 183, 313 U. S. 409; *Lima Tel. Co. v. P. U. C.*, 98 O. S. 110, 120 N. E. 330.) Congress intended that this Commission cooperate with State Commissions and municipalities, and the provisions of Sections 5(b) and 17 are special evidence of such intent."

The court below held that the Federal Power Commission has no jurisdiction to determine upon complaint of a municipality and upon its own investigation that a natural gas company has violated Section 4(a) of the Natural Gas Act by charging an unjust, unreasonable and therefore unlawful initial rate, and to determine the lawful rate for a period after the passage of the Natural Gas Act and prior to a Commission order fixing future rates. (IV R. 200-202.)

This raises the question whether the Commission has jurisdiction to determine the *lawful* rates for interstate

sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and prior to the issuance of an initial Commission rate-fixing order.

This question is of substantial importance to petitioner, the City of Cleveland, because the Federal Power Commission's "Findings as to Lawfulness of Past Rates," if valid, considered apart from the Commission's "Order Reducing Rates," furnish an appropriate basis for refunds to Cleveland consumers of temporary rates collected under bond by respondent's affiliate, The East Ohio Gas Company, in pending proceedings before The Public Utilities Commission of Ohio (*East Ohio Gas Company v. City of Cleveland*, P. U. C. O. Nos. 11,001, 11,218, 11,442), of $3,600,000 or an average of about $13 per customer from June 30, 1939 to June 30, 1942.

Conversely, the holding of the Court below that initial filed rates of a natural gas company are the only lawful rates until changed by a future rate-fixing order of the Federal Power Commission, unless reversed by this Court, would become *res judicata* between Cleveland and The East Ohio Gas Company as a privy of Hope, cf. *Sunshine Coal Company v. Adkins*, 310 U. S. 381, 389-391, 401-404 (1940) and in that event, the $3,600,000 would permanently inure to the benefit of the Standard Oil Company (New Jersey), which is the sole owner of both Hope and East Ohio.

**A. The jurisdiction of the Commission to determine LAWFUL rates for interstate sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and prior to the issuance of a Commission rate-fixing order is implied from the expressly granted power to determine upon complaint of a municipality and upon the Commission's own investigation that the act has been violated by charging an unlawful rate and by not charging a lawful rate.**

Under Section 4(a) of the Natural Gas Act, it is a violation of the Act to charge an unlawful rate, and it is a

further violation of the Act not to charge a lawful rate. Section 4(a) provides that (15 U. S. C. A. Sec. 717c (a)):

> "(a) All rates and charges made, demanded, or received by any natural-gas company for or in connection with the transportation or sale of natural gas subject to the jurisdiction of the Commission, and all rules and regulations affecting or pertaining to such rates or charges, shall be just and reasonable, and any such rate or charge that is not just and reasonable is hereby declared to be unlawful."

Section 13 of the Natural Gas Act authorizes the filing of complaints by "any State, municipality, or State commission complaining of anything done or omitted to be done in contravention of the provisions of this chapter." (*Supra*, p. 4.)

Section 14(a) of the Natural Gas Act provides that "the commission may investigate any facts * * * which it may find necessary * * * to determine whether any person has violated * * * any provision of this act * * *" and further provides that "the commission * * * may publish * * * and make available to State commissions and municipalities, information concerning any such matter." (*Supra*, p. 5.)

Section 16 of the Act provides that "the commission shall have power to perform any and all acts * * * as it may find necessary or appropriate to carry out the provisions of this chapter." (*Supra*, p. 5.)

In short, it is an express violation of the Act to charge an unjust, unreasonable and unlawful rate and not to charge a just, reasonable and lawful rate. The City of Cleveland was expressly authorized to complain, as it did, that the respondent, Hope Natural Gas Company, had charged an unlawful rate and had not charged a lawful rate in contravention of the provisions of the Act. The Commission was expressly authorized to investigate and to determine whether Hope had violated any provision of the Act, and to publish and make available to the City of Cleveland and The Public Utilities Commission

of Ohio information as to whether Hope had violated the Act by charging an unlawful rate and by not charging a lawful rate. In addition, the Act expressly gave to the Commission blanket authority "to perform any and all acts * * * as it may find necessary or appropriate to carry out the provisions of this chapter."

From the expressly granted power to determine upon complaint of a municipality and upon its own investigation that the Act has been violated by charging an unlawful rate and by not charging a lawful rate, the jurisdiction of the Commission to determine a lawful rate for the immediate past is necessarily implied.[1]

How could the Commission determine that the Act had been violated either by charging an unjust, unreasonable and unlawful rate or by not charging a just, reasonable or lawful rate, unless it could first determine a lawful rate?

The court below did not agree that under Section 4(a) it is an express violation of the Act to charge an unreasonable rate and not to charge a reasonable rate. The lower court took the view that "when rates were filed with the Commission pursuant to Section 4(c) of the Act they became the only lawful rates which the utility could charge or accept." (IV R. 202.) The majority below brushed aside the contention that "the legal rate was not made by the statute a lawful rate—it was lawful only if it was reasonable," upon the ground that the Natural Gas Act gives the Federal Power Commission no authority to award reparation. (IV R. 202.) There was no occasion for Congress to authorize the Federal Power Commission to award

---

[1] A determination of lawful rates for a period between the filing of the complaint and an initial Commission rate-fixing order, when not accompanied by any retroactive rate-fixing order, is, like an ascertainment of original cost and net investment under the Federal Water Power Act, an administrative matter, and not an exercise of judicial power. See *Clarion River Power Company v. Smith*, 59 F. (2d) 861 (1932) (C. C. A., D. C.); Cert. Den. 287 U. S. 639.

reparation to the ultimate consumers of gas—for whose ultimate benefit the Natural Gas Act was passed, see *Mississippi River Fuel Corporation v. Federal Power Commission*, 121 F. (2d) 159, 164 (1941) (Gardner, Circuit Judge) —because the award of reparation or refunds to ultimate consumers, like the fixing of future rates for ultimate consumers at burner tip, was left in the hands of the state commissions. As the opinion of the majority below stated, "It is to be noted that in the passage of the Public Utility Act of 1935, upon which the Natural Gas Act is modeled, provisions giving the Commission power to investigate single rates and issue reparation orders, originally incorporated in the bill, were stricken out, the Senate Committee saying in its report: 'They are appropriate sections for a state utility law, but the committee does not consider them applicable to one governing merely wholesale transactions'." (IV R. 201.) But the occasion for determining a lawful interstate rate different from a filed schedule rate for the immediate past is not confined to reparation cases. It also exists where, as here, the purpose of the Federal Act is to complement state regulation, see Natural Gas Act Section 1; *Public Utilities Commission of Ohio v. United Fuel Gas Company*, 317 U. S. 456 (1943) (Mr. Justice Frankfurter), and where the state regulatory bodies or courts may award reparation or order refunds on the basis of the Federal Commission's determinations. e.g. Ohio General Code Sections 614-44 to 614-47; Pennsylvania Public Service Commission Act, Article 5, Section 5, Public Utilities and Carriers Service, Pennsylvania Volume, Section 112, page 170. *State ex rel. The City of Cleveland v. The Court of Appeals for the Eighth District*, 104 O. S. 96, 108-109 (1922).

The holding of the court below that the Federal Power Commission was not impliedly authorized to determine the lawful rate for the immediate past as an incident to the

expressly granted power to determine whether the Act had been violated by charging an unlawful rate and by not charging a lawful rate, is in conflict with the decision of this Court in *Atlantic Coast Line Railroad Company v. Florida*, 295 U. S. 301, 312 (1935) (Mr. Justice Cardozo) where the court said:

> "* * * Unjust discrimination against interstate commerce, 'forbidden' by the statute, and there 'declared to be unlawful,' (Interstate Commerce Act, Sec. 13(4); *Board of Railroad Commissioners v. Great Northern Ry. Co., supra,* at pp. 425, 430; *Florida v. United States*, 292 U. S. 1, 5) does not lose its unjust quality because the evil is without a remedy until the Commission shall have spoken. The word when it goes forth invested with the forms of law may fix the consequences to be attributed to the conduct of the carrier in reliance upon an earlier word, defectively pronounced, but aimed at the self-same evil, there from the beginning. The Commission was without power to give reparation for the injustice of the past, but it was not without power to inquire whether injustice had been done and to make report accordingly. * * *"

It is respectfully submitted that the jurisdiction of the Commission to determine lawful rates for interstate sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and prior to the issuance of a Commission rate-fixing order is implied from the expressly granted power to determine upon complaint of a municipality and upon its own investigation that the Act has been violated by charging an unlawful rate and by not charging a lawful rate.

**B. The power to determine a reasonable and lawful rate for a reasonable period antedating the Commission's first order fixing rates for the future is implied from the expressly granted power to fix reasonable future rates.**

Under the authority conferred upon the Commission by Section 5(a) of the Natural Gas Act to fix rates for the

future (*Supra*, p. 3), the Commission was free to determine a reasonable rate for the period antedating its order. As a step in the process of fixing future rates, the Commission was authorized to consider and determine what rates were reasonable in the immediate past. This power to consider and determine what rates were reasonable in the immediate past, the Commission invoked in making its order fixing rates for the future. (I R. 68.) This Court has held under the section of the Packers and Stockyards Act, which is identical with Section 5(a) of the Natural Gas Act, that the administrative officer was free to determine the reasonable rate for the period antedating his initial order fixing rates for the future, for the purpose of making his order fixing rates for the future. In *United States v. Morgan*, 307 U. S. 183, 191 (1939) (Mr. Justice Stone), this Court said:

> "Assuming, as appellees contend, that after the Secretary's order of June, 1933, was set aside he could, in the reopened proceeding, neither promulgate a rate order as of that date nor make an order for the payment of money, he was still not without authority in the premises under the statute and the mandate of this Court. He was free to make an order fixing rates for the future, and for that purpose or any other within the purview of the Act he is now free to determine a reasonable rate for the period antedating any order he may now make. See *Atlantic Coast Line R. Co. v. Florida*, 295 U. S. 301, 312. * * *"

The power to determine a reasonable rate for a period antedating the Commission's first order fixing rates for the future is the power to determine a lawful rate. Not only does Section 4(a) of the Natural Gas Act expressly declare to be "unlawful" any rate that is not just and reasonable, but it mandatorily requires that "all rates * * * shall be just and reasonable." Section 4(e), when read together with Section 4(a), therefore imposes upon the natural gas company the affirmative duty of initially filing only a just and reasonable rate. The opposite interpreta-

tion adopted by the court below would have permitted the natural gas companies throughout the country to file initial rates of $1 per thousand cubic feet, or other ridiculous amounts, and then keep such rates in effect while defying the Federal Power Commission, with its limited staff, to determine and fix just and reasonable rates to be effective only after many years. Hence, a filed initial rate is lawful only if it is just and reasonable. "In other words," as Mr. Justice Roberts said in *Arizona Grocery Co. v. Atchison Ry.*, 284 U. S. 370, 384 (1932), "the legal rate was not made by statute a lawful rate—it was lawful only if it was reasonable." And the power to determine a just and reasonable rate for the period immediately antedating the Commission's first order fixing rates for the future is therefore the power to determine a lawful rate for such period.

It is respectfully submitted that the power to determine a reasonable and lawful rate for a reasonable period antedating the Commission's first order fixing rates for the future is implied from the expressly granted power to fix reasonable future rates.

**C. The holding of the Court of Appeals that the Federal Power Commission is without jurisdiction to determine lawful rates for a period subsequent to the passage of the Natural Gas Act and prior to an initial rate-fixing order thwarts and defeats the intent and purpose of the Congress.**

The intent and purpose of the Congress was to stop the impairment of state regulation, including retroactive state regulation, arising from the influx of natural gas into the state of ultimate consumption at unjust and unreasonable rates primarily fixed by a holding company usually owning both the purchasing and selling subsidiaries.

The legislative history of the Natural Gas Act of 1938 and of the Public Utility Act of 1935, from which it stems,

show that Congress regarded the charging of unjust and unreasonable interstate rates between subsidiaries of the same holding company as a serious evil.

Senator Wheeler of Montana, Chairman of the Senate Committee on Interstate and Foreign Commerce, who had charge of the Holding Company Bill, S. 2796, commonly known as the Wheeler-Rayburn Bill, on the floor of the Senate explained (79 Congressional Record, Part 8, page 8383, May 29, 1935):

> "* * * It (the Federal Trade Commission investigation) uncovered the practices of the holding companies which cannot be characterized in any other way, I submit without fear of contradiction, than as fraudulent and legalized thievery against the people of the United States."

One of the counts in the Federal Trade Commission's indictment of the holding company referred to in the foregoing statement by Senator Wheeler was (79 Cong. Rec., Part 8, p. 8384):

> "(11) Deceptive or illusory methods of dividing or pretending to divide earnings or profits."

In the Congressional hearings on the Natural Gas Bill, the Solicitor for the Federal Power Commission testified that the greatest handicap of the state commissions in protecting the rate payer had been the growth of the holding company, the expansion of these utilities beyond state lines, and the failure of the Federal Government to help solve the problem. (Devane, Hearings H. R. 5423, 74th Cong. 1st Sess., Part 1, p. 498.)

The final report of the Trade Commission on the natural gas industry, one of the documents specifically referred to in Section 1(a) of the Natural Gas Act, concluded (Senate Document 92, Part 84-A, 70th Congress, First Session, p. 611):

> "Twenty-two holding company groups are engaged in interstate transportation of natural gas.
>
> "In 1934 *eight holding company groups* controlled about one-fourth of the supply of natural gas, and they

*controlled approximately four-fifths of all natural gas moved in interstate commerce."*

Mr. Ralph Gallagher of the Standard Oil Company (New Jersey) testified that purchase from affiliates is the situation in most large gas consuming states. (Gallagher, Hearings H. R. 11662, 74th Cong. 2nd Sess., p. 144.)

Judge Benton, Solicitor for the National Association of Railroad and Utility Commissioners, testified (Hearings S. 1725, 74th Cong. 1st Sess., April 16 to 29, 1935, p. 757):

> "Where an operating public utility buys at arm's length from a producing company, it will buy as cheaply as it can. It may be compelled to pay an unreasonable price, but it will not pay more than it has to pay, but when it is under the control of a holding company it pays what it is told to pay."

The state commissions, standing alone, were frankly at a loss to prevent the spread through the holding company set-up of the evil of unreasonable rates for natural gas sold in interstate commerce at wholesale to burner tip in the state of destination. Representatives of municipalities and state commissions were practically unanimous in testifying that the right of state commissions recognized by this Court in *Dayton Power and Light Company v. Public Utilities Commission of Ohio*, 292 U. S. 290, 297 (1934) to inquire into the reasonableness of intercorporate transactions arrived at without arm's length bargaining and to disallow as operating expenses payments made in excess of the reasonable price, was inadequate as a remedy. They said this state right was inadequate because of insufficient funds, lack of power of subpoena running throughout the land, disparity of allowances approved in different jurisdictions, lack of control by the state commission in the state of distribution over the accounts of the producing affiliate in another state, and for other reasons. (Benton, Hearings H. R. 11662, 74th Cong. 2nd Sess., pp. 88-90.

95-98; Devane, Hearings H. R. 11662, 74th Cong. 2nd Sess., p. 153; Hoch, Hearings H. R. 11662, 74th Cong. 2nd Sess., p. 159; Reed, Hearings S. 1725, 74th Cong. 1st Sess., April 16 to 29, 1935, p. 698; Benton, Hearings 1725, 74th Cong. 1st Sess., April 16 to 29, 1935, p. 757; Smith, Hearings H. R. 5423, 74th Cong. 1st Sess., February, March, 1935, Part 1, p. 83; Benton, Hearings H. R. 5423, 74th Cong. 1st Sess., Part 3, p. 1654; see also *Elsbree, Interstate Transmission of Electric Power* (1931) (Harvard University Press), p. 119.)

In the debates on the Natural Gas Act, Senator Wheeler of Montana who had charge of the bill on the floor of the Senate as Chairman of the Committee on Interstate and Foreign Commerce, stated in response to a question from Senator Bulkley of Ohio (81 Cong. Rec. 75th Congress, First Session, Part 8, p. 9315):

"Mr. Bulkley: Mr. President, will the Senator explain just how this bill will improve the situation outlined by the Senator from Indiana (Mr. Minton)? That is the situation that we have in Ohio, and I am very much interested in it.

"Mr. Wheeler: It will improve the situation in this way: The Federal Power Commission will have power to regulate the price of gas shipped and sold at wholesale in interstate commerce, and so they will investigate and find out what is a fair price for it. The Senator's city of Cleveland, and other cities in Ohio, are helpless.

"Mr. Bulkley: The city of Cleveland uses gas imported from West Virginia; and the company which distributes the gas buys it in West Virginia from another corporation that is owned by the same people. How can we get around that?

"Mr. Wheeler: Simply because of the fact that under the bill, if the gas is shipped in interstate commerce, the Federal Power Commission has the right to investigate and say whether or not the company which ships it charges a fair rate for the wholesale

gas which it is selling to the city of Columbus or the city of Cleveland. At present that cannot be done. No one can say whether the price charged is a fair price, or whether it is a high price, or whether the city of Cleveland or the city of Columbus is being robbed. When efforts are made to get that information they are blocked by injunctions in the lower Federal courts, because it is said that the city has no authority over interstate commerce.

"Mr. Bulkley: I thank the Senator. I think the bill will be of great benefit."

In short, the history and conditions of the times as shown by the Congressional hearings and debates indicate that there was a widespread belief that the impairment of state and local utility regulation by the influx of natural gas from other states at prices fixed by holding companies without any arm's length bargaining between the purchaser and seller was an evil which had to be stopped.

To remedy this evil, Congress did three things. First, the Natural Gas Act outlawed from the date of its passage every interstate gas rate that was unjust and unreasonable, and imposed upon every natural gas company the duty of charging only just and reasonable rates from that day forward. Natural Gas Act, Section 4(a); House Report 709, House of Representatives, 75th Congress, First Session, April 28, 1937, Report to Accompany H. R. 6586, discussion of Section 4(a). Second, Congress authorized the Federal Power Commission to determine that any natural gas company had violated the Natural Gas Act by charging an unlawful rate or by not charging lawful rates, and authorized its minister to make such determination upon the complaint of any state, municipality or state commission, and further authorized the Federal Power Commission to make such information available to any municipality or state commission, thereby minimizing by the method of publicity (see *Valvoline Oil Company v. United States*, 308 U. S. 141, 146 (1939). (Mr. Justice

Reed)) the effect of the unlawful element in the interstate commerce upon the economy of the state of destination. Third, Congress authorized the Federal Power Commission to fix just and reasonable rates for the future, thereby removing the unlawful element altogether from the interstate commerce. It must be implied from these express grants of power that Congress authorized the Federal Power Commission to determine lawful rates for a period subsequent to the passage of the Natural Gas Act and prior to an initial rate-fixing order, as an aid to state regulation.

The court below suggests that the Federal Power Commission's authority to fix interim rates, upheld in *Federal Power Commission v. Natural Gas Pipeline Company*, 315 U. S. 575, 583 (1942) (Mr. Chief Justice Stone), negatives any intent on the part of Congress to confer upon the Federal Power Commission authority to determine lawful rates for a period subsequent to the passage of the Natural Gas Act and prior to an initial Commission rate-fixing order. (IV R. 202.) Of course, if the complaint of the City of Cleveland was right, the ideal arrangement would be for the Federal Power Commission to reduce Hope's rate to East Ohio the moment that complaint was filed. The state commission in Ohio could then have acted promptly in reducing the rates of the affiliated East Ohio Gas Company in Cleveland. But Congress must have known, and in fact was informed through the hearings concerning the state experience in natural gas regulation, that the necessary investigation in these natural gas rate cases takes years. Over two years after Cleveland's complaint was filed in this case—and it was the first complaint filed under the Natural Gas Act—the Federal Power Commission did not have sufficient information in its opinion to make an interim rate order. (*Supra*, p. 14.) And information as to reasonable and lawful interstate gas rates is a substantive statutory right of the state and local representa-

tives of the public interest for the years thus occupied by investigations and hearings, no less than for the future. This being so, and the Federal Power Commission being the tribunal to which municipalities, states and state commissions are referred as the ultimate guardian of the public interest in this field, it is a natural incident of the jurisdiction that the Commission should be free to make findings as to lawful rates for the period between the filing of complaints and an initial rate-fixing order fixing future rates. Congress did not seek to stop the impairment of state regulation arising from the influx of natural gas into the state of ultimate consumption at unjust and unreasonable rates primarily fixed by a holding company usually owning both the purchasing and selling subsidiaries only after the utilities had had a sporting chance for delay. Congress sought to aid state regulation beginning June 21, 1938, the effective date of the Natural Gas Act.

The holding of the court below does not support the purpose and intent of Congress but actually thwarts and defeats it. Since the passage of the Natural Gas Act, the state courts in Pennsylvania and the state commission in Ohio have held that the state commissions in Ohio and Pennsylvania are deprived by passage of the Natural Gas Act of all authority to require the distributing affiliates in Ohio and Pennsylvania to prove the costs of the producing affiliate in West Virginia in justification of the reasonableness of their interstate payments for natural gas. *Peoples Natural Gas Company v. Pennsylvania Public Utility Commission*, 14 A. (2d) 133, 35 P. U. R. (N. S.) 75 (Pennsylvania Superior Court) (1940); *East Ohio Gas Company v. Cleveland*, P. U. C. O. Nos. 11,001, *et al.*, R. 2958-2959 (Public Utilities Commission of Ohio). The upshot is that unless this Court holds in this case that the Federal Power Commission may determine lawful rates between affiliates subsequent to the filing of a complaint and prior to an initial order fixing interstate rates, the decision of the lower

court will result not in complementing state regulation, but in conferring self-regulation for several years after the effective date of the Natural Gas Act not only upon the interstate natural gas company in West Virginia, but also upon the local distributing affiliates in Ohio and Pennsylvania.

It is respectfully submitted that the Court of Appeals erred in holding that the Federal Power Commission has no jurisdiction to determine the lawful rates for interstate sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and prior to the issuance of a Commission rate-fixing order, for the reason that said jurisdiction is implied from expressly granted powers, and is supported by the legislative history of the statute.

## V.

**THE COURT OF APPEALS FURTHER ERRED IN HOLDING THAT THE COMMISSION'S "FINDINGS AS TO LAWFULNESS OF PAST RATES" SHOULD BE SET ASIDE EVEN IF THE COMMISSION HAS JURISDICTION TO MAKE SUCH FINDINGS, FOR THE REASON THAT SAID FINDINGS HAVE A RATIONAL BASIS AND ARE SUPPORTED BY SUBSTANTIAL EVIDENCE.**

The majority below held that "the findings as to past rates * * * should be set aside for the reasons heretofore given in discussing valuation and depreciation." (IV R. 203.)

It is submitted that the Court of Appeals thus erred in setting aside the Commission's "Findings as to Lawfulness of Past Rates" for the same reasons that it erred in setting aside the Commission's "Order Reducing Rates."

The Court of Appeals finally rested its decision upon the further ground that "the finding as to unreasonableness of these rates cannot be sustained because made on the basis of the utility's experience during the years in question, instead of upon a reasonable estimate of expense based upon experience of a prior period." (IV R. 203.)

This was the lower court's final error, because in determining lawful past rates the actual operating experience for the years in question is better than prophecy. *West Ohio Gas Company v. P. U. C.*, 294 U. S. 79, 82 (1935) (Mr. Justice Cardozo).

Dobie, Circuit Judge, dissenting below, rightly concluded (IV R. 207):

> "For the reasons stated, I think the decision and findings of the Commission should be affirmed."

## CONCLUSION.

Upon a fair consideration of the record and applicable law we submit that:

1. The Court of Appeals erred in holding that the Commission's "Order Reducing Rates" and "Findings as to Lawfulness of Past Rates" are unconstitutional, for the reason, among others, that there is no constitutional question involved in this case.

2. The Court of Appeals further erred in setting aside the Federal Power Commission's "Order Reducing Rates" for the reason that said order is authorized by the Natural Gas Act, and is based upon findings which have a rational basis and are supported by substantial evidence.

3. Even if there were a constitutional question involved, as there is not, the Court of Appeals further erred in setting aside the Federal Power Commission's "Order Reducing Rates" for the reason that in the absence of an exercise of the power of eminent domain or other direct appropriation of property for the use of the United States Government, respondent was not entitled under the Fifth Amendment to anything more than due process of law.

4. The Court of Appeals erred in holding that the Federal Power Commission has no jurisdiction to determine the lawful rates for interstate sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and prior to the issuance of a Commission rate-fixing order, for the reason that said jurisdiction is implied from expressly granted powers, and is supported by the legislative history of the statute.

5. The Court of Appeals further erred in holding that the Commission's "Findings as to Lawfulness of Past Rates" should be set aside, even if the Commission has jurisdiction to make such findings, for the reason that said findings have a rational basis and are supported by substantial evidence.

Therefore, it is respectfully submitted that the judgment of the United States Circuit Court of Appeals for the Fourth Circuit should be reversed, and that the Federal Power Commission's "Order Reducing Rates" and "Findings as to Lawfulness of Past Rates" should be affirmed.

## INDEX.

STATEMENT ..... 1

ARGUMENT:

I. THE FEDERAL POWER COMMISSION'S WARTIME "ORDER REDUCING RATES" IS JUST, REASONABLE AND COMPENSATORY AND IS NOT REPUGNANT TO THE DUE PROCESS CLAUSE OF THE FIFTH AMENDMENT ..... 4

A. The Commission's wartime rate order permits respondent to earn in wartime the same profit and rate of profit which respondent was able to earn when it fixed its own rates in the normal peacetime base period selected by respondent as fair, namely 1937-1939, inclusive ..... 4

1. The Hope company proves by its conduct, experience and claims in the 1937-1939 period of Company-fixed rates that the claimed return which the Commission allowed on the Company's claimed interstate present value rate base is not confiscatory ..... 4

2. The Commission's ordered rates, had they been in effect in the test year 1940, would have permitted Hope to earn the same annual return on Hope's claimed interstate present value rate base with which Hope was satisfied and under which Hope lived during the 1937-1939 period of Company-fixed rates ..... 7

3. In fixing rates for the future, the Commission actually allowed the Company the same annual return on the Company's claimed interstate present value rate base which the Company had proved by its experience, conduct, and claims to be nonconfiscatory ..... 9

Comparison of 1942 and 1940 Interstate Net Profit at Commission's Rate based on Commission's Findings and Hope Brief ..... 11

B. If temporary use of respondent's property had been requisitioned by the Government, it does not appear that the just compensation to which respondent would be entitled, during this war, either by statute or under the Fifth Amendment, would exceed the same profit and rate of profit which respondent was able to earn when it fixed its own rates in the normal peacetime base period selected by respondent as fair, namely 1937-1939, inclusive 12

C. Since it does not appear that respondent would have been entitled to more if the temporary use of its property had been requisitioned, the Commission's order deprives respondent of only the opportunity to charge more than the use of its property is reasonably worth at the expense of the public in wartime ..... 16

II. THE CIRCUIT COURT OF APPEALS WAS WITHOUT JURISDICTION IN THIS CASE TO REVIEW THE FEDERAL POWER COMMISSION'S "FINDINGS AS TO LAWFULNESS OF PAST RATES" OR DECIDE THE QUESTION OF THE COMMISSION'S AUTHORITY TO MAKE SAID FINDINGS ..... 17

## No. 35.

CITY OF CLEVELAND,
*Petitioner,*

v.

HOPE NATURAL GAS COMPANY,
*Respondent.*

ON WRIT OF CERTIORARI TO
THE UNITED STATES CIRCUIT COURT OF APPEALS.
FOR THE FOURTH CIRCUIT.

## REPLY BRIEF OF PETITIONER.

### STATEMENT.

This brief is filed by petitioner, City of Cleveland, in reply to the brief filed herein on behalf of respondent, Hope Natural Gas Company.

The first question, says respondent, is whether the Commission's "Order Reducing Rates" is confiscatory? (Brief on Behalf of Hope Natural Gas Company, October Term 1943, Nos. 34 and 35, p. 2.) The Federal Power Commission's wartime rate order is just, reasonable and compensatory and is not repugnant to the due process clause of the Fifth Amendment. The Commission's wartime rate order permits respondent to earn in wartime the same profit and rate of profit which respondent was able to earn when it fixed its own interstate rates in the normal peacetime base period selected by respondent as fair, namely, 1937-1939, inclusive. When the great bulk of the nation's business is operating in a strictly controlled economy under a statutory renegotiation scheme which holds out to in-

dustry no promise of war profits materially greater than normal peacetime profits, in spite of vastly increased volume, it requires considerable temerity for the Standard Oil Company (New Jersey) to claim through this wholly owned subsidiary, Hope Natural Gas Company, that Hope's property is confiscated—that is, stolen—by a wartime order of the Federal Government which permits the Company to earn under wartime conditions the same profit and rate of profit after all taxes which it earned in its own selected peacetime base period when it fixed its own interstate rates free of any Government regulation. If temporary use of respondent's property had been requisitioned by the Government during this war, it does not appear that the just compensation or rental to which respondent would be entitled by statute or under the Fifth Amendment would exceed the same profit and rate of profit which respondent was able to earn when it fixed its own rates in the normal peacetime base period selected by respondent as fair, namely 1937-1939, inclusive. Respondent's gas is destined for the Cleveland-Akron-Pittsburgh triangle and the price of it enters directly or indirectly into the cost of planes, tanks, ships, and guns for which the American people as a whole must pay. Since it does not appear that respondent would have been entitled to more if the possession of its property had been requisitioned, the Commission's order deprives respondent of only the opportunity to charge more than the use of its property is reasonably worth at the expense of the public in wartime. The Federal Power Commission's wartime rate order is just, reasonable, and compensatory and is not repugnant to the due process clause of the Fifth Amendment.

The second question, says respondent, is whether the court below properly set aside the Federal Power Commission's "Findings as to Lawfulness of Past Rates" as an "order"? (Brief on Behalf of Hope Natural Gas Com-

pany, October Term 1943, Nos. 34 and 35, pp. 2, 128.) The Circuit Court of Appeals had no jurisdiction to review the Federal Power Commission's "Findings as to Lawfulness of Past Rates" and no jurisdiction to decide in this case whether the Federal Power Commission had authority to make such findings. The Federal Power Commission's "Findings as to Lawfulness of Past Rates" are not an "order." These "Findings" do not have the same effect upon Hope's affiliate in a proceeding before a State commission as a Federal Power Commission order fixing rates for the future. An order fixing rates for the future, so long as it remains in effect, is absolutely binding upon the affiliate in a proceeding before a State commission. The Federal Power Commission's "Findings as to Lawfulness of Past Rates," on the contrary, are subject to challenge by Hope's affiliate in the proceeding before the State commission upon the grounds that they are unsupported by substantial evidence, outside the jurisdiction of the Federal commission, or otherwise unlawful. And any order of the State commission adopting such findings is subject to judicial review upon all these grounds, as well as upon Constitutional grounds. The Federal Power Commission's "Findings as to Lawfulness of Past Rates" were not reviewable in the Circuit Court because they are not an "order."

## ARGUMENT.

### I.

### THE FEDERAL POWER COMMISSION'S WARTIME "ORDER REDUCING RATES" IS JUST, REASONABLE AND COMPENSATORY AND IS NOT REPUGNANT TO THE DUE PROCESS CLAUSE OF THE FIFTH AMENDMENT.

#### A. The Commission's wartime rate order permits respondent to earn in wartime the same profit and rate of profit which respondent was able to earn when it fixed its own rates in the normal peacetime base period selected by respondent as fair, namely 1937-1939, inclusive.

##### 1. The Hope company proves by its conduct, experience and claims in the 1937-1939 period of Company-fixed rates that the claimed return which the Commission allowed on the Company's claimed interstate present value rate base is not confiscatory.

The Company's claimed interstate net operating income at Company-fixed rates for the years 1937-1939, inclusive, was $1,885,000. (I R. 481.) The Company's claimed interstate rate base during the same period of Company-fixed rates was $66,360,000. (I R. 481.) The Company's claimed per cent return earned on the Company's claimed interstate rate base during the same period of Company-fixed rates averaged 2.84 per cent.

The following table shows (1) the Company's claimed interstate net operating income during the 1937-1939 period of Company-fixed rates; (2) the Company's claimed interstate present value rate base during the 1937-1939 period of Company-fixed rates; (3) the Company's claimed per cent return earned on the Company's claimed interstate present value rate base during the 1937-1939 period of Company-fixed rates (I R. 481):

| Years 1937-1939 | Company's claimed interstate net operating income during period of Company-fixed rates 1937-1939 | Company's claimed interstate present value rate base during perfod of Company-fixed rates 1937-1939 | Company's claimed per cent return earned on company's claimed interstate present value rate base during period of Company-fixed rates 1937-1939 |
|---|---|---|---|
| 1937 | $ 2,642,452 | $66,360,837 | 3.98% |
| 1938 | 785,080 | 66,360,837 | 1.18% |
| 1939 | 2,228,912 | 66,360,837 | 3.36% |
| Average | $ 1,885,481 | $66,360,837 | 2.84% |

It will be noted that in the 1937-1939 period of Company-fixed rates, the Company's claimed interstate net income falls short of the $4,313,454 which would be necessary to yield a 6½ per cent return on the Company's claimed interstate present value rate base by an average of $2,427,773 per year, and never in any one year even remotely approaches a 6½ per cent return.

Of course, the Company's claim, coupled with the fact that it was satisfied with its 1937-1939 Company-fixed interstate net earnings, as appears below, suggests the inference that either the Company's net income for these years is understated, or that its rate base is inflated, or both. *Dayton Power and Light Company v. Public Utilities Commission of Ohio*, 292 U. S. 290, 311-312 (1934) (Mr. Justice Cardozo); *Lindheimer v. Illinois Bell Telephone Company*, 292 U. S. 151, 163-164 (1934) (Mr. Chief Justice Hughes).

But laying that question to one side, and accepting the Company's claims at face value, the conclusion is inevitable that when the Company fixed its own rates in what it calls the normal period 1937-1939, inclusive (Petition for Review, IV R. 30-31), (1) either Hope was voluntarily confiscating its own property; or (2) Hope is able to live and meet its capital requirements with a 2.84 per cent return upon the claimed $66,000,000 present value of its physical property.

Hope's conduct repels any inference that it was voluntarily confiscating its own property when it fixed its own rates in what it calls the three average normal years 1937-1939, inclusive. Hope denied in the pleadings in this case that the rates to East Ohio, Peoples, Fayette County, and Manufacturers Light and Heat, which produced the aforesaid results, were unjust or unreasonable, or had been unjust or unreasonable. (II R. 3, 12, 16, 25, 27.) Prior to the passage of the Natural Gas Act, when Hope was free to fix its own interstate rates without any public regulation, it did not exercise its power to increase the rates which it claimed produced an annual return of $1,885,000 per year, or less than 2.9 per cent on the claimed present value of Hope's physical property. When the Natural Gas Act was passed, Hope voluntarily filed the rates which produced this return with the Federal Power Commission as rate schedules. Hope never sought to file higher rate schedules with the Federal Power Commission. Both before the Federal Power Commission and in its Petition for Review in the United States Circuit Court of Appeals, Hope claimed that its average operating experience for the years 1937 to 1939, inclusive, is the proper basis for testing the reasonableness of its rates. (IV R. 30-31.) Upon these undisputed facts, there is only one possible inference—that Hope was satisfied with and able to live under an annual return of less than 2.9 per cent per annum on a claimed interstate present value rate base of approximately $66,000,000.

If we accept arguendo the Company's claims that in the years when it fixed its own rates, 1937-1939, inclusive, it earned a return from its interstate business of $1,885,000 per year, that the present value of its interstate property in those years was not less than $66,000,000, and that the return earned was less than 2.9 per cent on the Company's claimed interstate present value rate base, the conclusion follows inevitably that in the absence of any substantial change in the Company's claimed $66,000,000 present value

rate base, or in the cost of money, an annual return of $1,885,000 per year is not confiscatory for this Company, whether the rate producing that return be fixed by the Company or whether it be fixed by a regulatory commission.

**2. The Commission's ordered rates, had they been in effect in the test year 1940, would have permitted Hope to earn the same annual return on Hope's claimed interstate present value rate base with which Hope was satisfied and under which Hope lived during the 1937-1939 period of Company-fixed rates.**

Had the Commission's order reducing rates been effective in the test year 1940, the Hope company would have earned the same net return on its claimed present value interstate rate base which the Company had established by experience it was able to live on.

The court below recognized that 1940 is a proper test year, and said (IV R. 197):

> "* * * The increased demand for gas resulting from war conditions, made the experience of 1940 a safer guide for the future than that of prior years. Hope makes much of the fact that the winter of that year was more than ordinarily severe and that the increased demand for gas resulted in a large percentage of sales representing gas from its own wells, which did not involve payment of the charge required by its contracts on gas purchased from others. The increased demand due to war conditions, however, must necessarily have the same effect, so far as this matter is concerned. The experience of 1940 was the only experience properly comparable. * * *"

The Company's claimed net operating income from its interstate business for the test year 1940 was $4,629,355. (I R. 481.) The Commission ordered a reduction in interstate gross revenues on the basis of 1940 experience of $3,609,857. (I R. 6.) The federal income tax saving at the 1940 tax rate, had this reduction become effective in

1940, would have been 24 per cent of the ordered reduction in revenue or $866,366. The reduction in the Company's claimed 1940 net operating income had the Commission's order been effective in 1940 would thus have been $2,743,491. ($3,609,857 minus $866,366.) Subtracting the reduction in net income due to the Commission's order from the Company's claimed net operating income for the year 1940, it is thus a simple matter of arithmetic that on the Company's own figures the Commission's ordered rate, had it been in effect in the test year 1940, would likewise have permitted the Company to earn a net return from its interstate business of $1,885,000, the identical figure which the Company claimed it earned in the 1937-1939 period of Company-fixed rates.

Expressed in tabular form, this works out as follows:

| | | |
|---|---|---|
| Company's claimed net operating income—year 1940 (I R. 481) | | $4,629,355 |
| Reduction in Revenues Ordered (I R. 6) | $3,609,857 | |
| Less Federal Income Tax Saving at 1940 tax rate—24% of Reduction in Revenue | $ 866,366 | |
| Reduction in net income due to Commission order | | $2,743,491 |
| Company's claimed net operating income adjusted to rates ordered for the future —Year 1940 | | $1,885,864 |

The Company's claimed interstate rate base for 1940 was $66,360,000, the same as for the years 1937-1939, inclusive. (I R. 481.)

There was no substantial change in the cost of money bearing on the fair rate of return between the years 1937-1939 and the year 1940, and to the extent that there was any change, the cost of money was lower in 1940 than in the period 1937-1939. (III R. 400, *et seq.*)

In short, if the Company's net operating income and rate base figures be accepted, it is manifest that the Commission's rate, had it been in effect in the test year 1940, would have yielded the Company the same 2.84 per cent

net return on the Company's claimed interstate present value rate base, after all taxes and in spite of increased war taxes, which the Company had established by its own experience and claims was nonconfiscatory and sufficient to enable the Company to live.

**3. In fixing rates for the future, the Commission actually allowed the Company the same annual return on the Company's claimed interstate present value rate base which the Company had proved by its experience, conduct, and claims to be nonconfiscatory.**

Company counsel will be obliged to concede upon the oral argument of this case that had the Commission's rates been in effect in the test year 1940, the Company would have earned at the Commission's rates the same annual return on the Company's claimed interstate present value rate base with which the Company was satisfied and under which it lived in the 1937-1939 period of Company-fixed rates. However, the Company may assert that the earnings for years after 1940 at the Commission's rate would not be as large as for 1940 and hence not equivalent to the annual net return which the Company had itself proved to be nonconfiscatory. But we can find nothing in the record which compels this conclusion for which the Company may contend.

On the contrary, the Commission found in the opinion which it incorporated in its findings (I R. 2) that "It seems certain that 1940 will be the lowest year, on an earnings basis, of the 1940-1944 period." (I R. 70.) And this finding was supported by substantial evidence. For, as the Commission further found, the first quarter of 1941 showed an increase in net operating income over the first quarter of 1940 of about 20 per cent. (I. R. 70; III R. 361-365.) Indeed, the respondent did not seek to challenge by evidence the Commission's finding that 1940 would be the lowest year on an earnings basis for the five year period 1940-1944, in-

clusive. Respondent did not seek in the lower court to adduce additional evidence showing the operating experience of the Company for the full year 1941, as it had a right to do. (Natural Gas Act, Sec. 19(b).) Nor did respondent seek to adduce additional evidence as to the actual experience in 1942, which was available to it before the lower court rendered its decision on February 16, 1943. (IV R. 207.)

In fixing rates for the future, the Commission actually allowed the Company the same annual return on the Company's claimed interstate present value rate base which the Company had proved by its experience, conduct, and claims to be nonconfiscatory.

Of course, in the legislative process of fixing rates for the future, the Commission conservatively used 1940 as a test year to forecast future revenues, although the Commission knew and found that the president of the Hope Company had admitted in July of 1941 a great increase in sales and hence in revenues for 1941 over 1940, and liberally forecast future expenses at the 1940 figure plus $421,160. (I R. 70, 504.) (I R. 62, 70, 72.) This was simply the Commission's way of saying that it was allowing the Company at least $421,000 more than a 6½% per cent return on net investment. Referring to its rate order of May 26, 1942, the Commission says in its brief that "even, under the prescribed rate reduction, Hope is earning $1,091,790 annually in excess of a 6½ per cent rate of return, if the 1942 level is taken as the criterion." (*Federal Power Commission, et al. v. Hope Natural Gas Company*, October Term, 1943, No. 34, Brief for Petitioners, p. 28.)

The Company's brief denies the assertion of the Commission's brief, but submits an alternative calculation which shows, when accepted as an admission, that had the Commission's rate been in effect in 1942, it would have produced substantially the same net profit from the Company's interstate business that it would have produced had it been

in effect in 1940, the test year. The following table compares the 1942 and 1940 net profit at the Commission's rate on the basis of the Commission's findings and the Hope brief, Appendix E:

**Comparison of 1942 and 1940 Interstate Net Profit at Commission's Rate based on Commission's Findings and Hope Brief**

| | 1940 per Commission findings (I R. 12) | 1942 per Hope Br. App. E. p. 185 |
|---|---|---|
| Net operating income at Company-fixed rates | $5,386,597 | $4,816,284 |
| Reduction in net income due to Commission order | 2,743,491[1] | 2,165,915[2] |
| Net operating income had rates ordered been in effect for full yetar | $2,643,106 | $2,640,369 |

| | |
|---|---|
| [1]Ordered reduction in gross revenues (I R. 6) | $3,609,857 |
| Less Federal Income Tax saving at 1940 corporate income tax rate—24% of ordered reduction in gross revenues | 866,366 |
| Reduction in net income | $2,743,491 |
| [2]Ordered reduction in gross revenues (I R. 6) | $3,609,857 |
| Less Federal Income Tax saving at 1942 corporate income tax rate—40% of reduction in gross revenue | 1,443,943 |
| Reduction in net income—1942 | $2,165,915 |

But the Commission's legislative method of fixing future rates must not be confused with the question whether the rate which the Commission fixed is confiscatory. As this Court has said in a case where the question of confiscation was involved; *Pacific Gas Company v. San Francisco*, 265 U. S. 403, 406 (1924) (Mr. Justice McReynolds):

> "The problem was to ascertain the probable result of the specified rate if applied under well known past conditions, not to forecast the probable outcome of a proposed rate under unknown future conditions."

And it is respectfully submitted that in this case the result of the Commission's rate if applied to the known operating experience of the test year was clearly not con-

fiscatory, even if we accept the Company's own claims as to net operating income and present value rate base.

For the future, if conditions should change, the door of the Commission is always open to the respondent.

The Company's case analyzes down to the proposition that a claimed interstate net return of $1,885,000 per year on the Company's claimed $66,000,000 interstate present value rate base is just, reasonable, and nonconfiscatory if fixed by the Hope Natural Gas Company, but becomes unjust, unreasonable and grossly confiscatory if fixed by the Federal Power Commission.

The Commission's wartime rate order permits respondent to earn in wartime the same profit and rate of profit which respondent was able to earn when it fixed its own rates in the normal peacetime base period selected by respondent as fair, namely 1937-1939, inclusive.

**B. If temporary use of respondent's property had been requisitioned by the Government, it does not appear that the just compensation to which respondent would be entitled, during this war, either by statute or under the Fifth Amendment would exceed the same profit and rate of profit which respondent was able to earn when it fixed its own rates in the normal peacetime base period selected by respondent as fair, namely 1937-1939, inclusive.**

If the President had commandeered temporary use of Hope's property for war purposes under his Constitutional war powers or under the Second War Powers Act the Government would not be required to pay Hope as compensation more than a just and fair rental for the use. 50 U. S. C. A. App. Sec. 632; Const. Amend. 5; See Note, *Executive Commandeering of Strike Bound Plants*, 51 Yale L. J. 282, 290 (1941); *Marcus, The Taking and Destruction of Property Under a Defense and War Program*, 27 Cornell L. Q. 476, 521 (1942); Cf. 50 U. S. C. A. App. Sec. 309.

The most wholesale attempt of the Federal Government to take possession of public utility property in wartime is the seizure of the railroads during World War I.

When President Wilson addressed the Congress on January 4, 1918 in explanation of his assumption of control of the railroads, he said (H. R. Document No. 764, 65th Congress, Second Session, 1918, p. 4):

> "While the present authority of the Executive suffices for all purposes of administration, and while of course all private interests must for the present give way to the public necessity, it is, I am sure you will agree with me, right and necessary that the owners and creditors of the railways, the holders of their stocks and bonds, should receive from the Government an unqualified guarantee that their properties will be maintained throughout the period of federal control in as good repair and as complete equipment as at present; and *that the several roads will receive under federal management such compensation as is equitable and just alike to their owners and to the general public. I would suggest the average net railway operating income of the three years ending June 30, 1917.* I earnestly recommend that these guarantees be given by appropriate legislation and given as promptly as circumstances permit." (Italics ours.)

In accordance with President Wilson's recommendation, Congress adopted in the Federal Control Act of March 21, 1918 as the basis of compensation for the use of the railway property thus taken over during the war the normal peacetime base period net railway operating income of the three years ending June 30, 1917, as follows (40 Stat. 451) (1918):

> "*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That the President, having in time of war taken over the possession, use, control and operation (called herein Federal Control) of certain railroads and systems of transportation (called herein carriers), is hereby authorized to agree with and to

guarantee to any such carrier making operating returns to the Interstate Commerce Commission, *that during the period of such Federal Control it shall receive as just compensation an annual sum, payable from time to time in reasonable installments, for each year and pro rata for any fractional year of such Federal Control, not exceeding a sum equivalent as nearly as may be to its average annual railway operating income for the three years ended June thirtieth, nineteen hundred and seventeen.*

*"That any railway operating income accruing during the period of Federal Control in excess of such just compensation shall remain the property of the United States * * *."* (Italics ours.)

No railroad ever brought a test of the constitutionality of the Federal Control Act of March 21, 1918 to this Court. See *Hines, War History of American Railroads* (1928), pp. 94-95; *Aitchison, War Time Control of American Railways*, 26 Va. L. R. 847, 870, *et seq.* (1940); *American Economic Mobilization*, 55 Harvard L. R. 427, 533-534 (1942). But the opinion of President Wilson, the opinion of the Congress of the United States, and the conduct of hundreds of railroads affected by the legislation, constitute persuasive proof that the allowance as just compensation in time of war for even an actual taking of the use of private property of the average earnings of a normal peacetime base period satisfies the requirements of the Fifth Amendment.

The Federal Government is now the sole purchaser for the bulk of the nation's production in the controlled war economy which has replaced the normal free market. Under the Renegotiation Act, as amended, industries selling to the Government may retain after renegotiation only what a renegotiation board thinks is a fair profit. There is no formula for determining a fair profit under the Renegotiation Act. But if the contractor's operations in relation to his renegotiable business are the same or similar to those of his peacetime business, the board will look to the

contractor's base period of peacetime earnings as a measure of his allowable war profits. The renegotiation boards consider the contractor's earnings *before taxes, not after taxes. Steadman, Renegotiation of War Contracts,* 42 Mich. L. R. 1, 14, 17, 19 (August, 1943). When the great bulk of the nation's business is operating under a statutory renegotiation scheme which holds out to industry no promise of war profits materially greater than normal peacetime profits in spite of vastly increased volume, it requires considerable temerity for the Standard Oil Company (New Jersey) to claim through this wholly owned subsidiary, Hope Natural Gas Company, that Hope's property is confiscated—that is, stolen—by a wartime order of the Federal Government which permits the Company to earn under wartime conditions the same profit and rate of profit *after all taxes* which it earned in its own selected peacetime base period when it fixed its own interstate rates free of any Government regulation.

It is respectfully submitted that if the use of respondent's property had been requisitioned by the Government during the present war, the just compensation to which respondent would have been entitled under the Fifth Amendment would not exceed the same profit and rate of profit which respondent was able to earn when it fixed its own rates in the normal peacetime base period selected by respondent as fair, namely 1937-1939, inclusive.

**C. Since it does not appear that respondent would have been entitled to more if the temporary use of its property had been requisitioned, the Commission's order deprives respondent of only the opportunity to charge more than the use of its property is reasonably worth at the expense of the public in wartime.**

To find a helpful precedent it is necessary to go back to a case which arose out of the first world war.

In *Highland v. Russell Car Company*, 279 U. S. 253 (1929) (Mr. Justice Butler), this Court said at page 262:

> "* * * The principal purpose of the Lever Act was to enable the President to provide food, fuel and other things necessary to prosecute the war without exposing the government to unreasonable exactions. The authorization of the President to prescribe prices and also to requisition mines and their output made it manifest that, if adequate supplies of coal at just prices could not be obtained by negotiation and price regulation, expropriation would follow. Plaintiff was free to keep his coal, but it would have been liable to seizure by the government. The fixing of just prices was calculated to serve the convenience of producers and dealers as well as of consumers of coal needed to carry on the war. As it does not appear that plaintiff would have been entitled to more if his coal had been requisitioned, the Act and orders will be deemed to have deprived him only of the right or opportunity by negotiation to obtain more than his coal was worth. Such an exaction would have increased the cost of the snowplows and other railroad equipment being manufactured by the defendant and therefore would have been directly opposed to the interest of the government. As applied to the coal in question, the statute and executive orders were not so clearly unreasonable and arbitrary as to require them to be held repugnant to the due process clause of the Fifth Amendment."

In the case at bar, the Commission's wartime rate order permits respondent to earn in wartime the same profit and rate of profit which respondent was able to earn

when it fixed its own interstate rates in the normal peacetime base period selected by respondent as fair, namely 1937-1939, inclusive. If the use of respondent's property had been requisitioned by the Government during this war, it does not appear that the just compensation to which respondent would be entitled by statute or under the Fifth Amendment would exceed the same profit and rate of profit which respondent was able to earn when it fixed its own rates in the normal peacetime base period selected by respondent as fair, namely 1937-1939, inclusive. Respondent's gas is destined for the Cleveland-Akron-Pittsburgh triangle and the price of it enters directly or indirectly into the cost of planes, tanks, ships, and guns for which the American people as a whole must pay. Since it does not appear that respondent would have been entitled to more if the possession of its property had been requisitioned, the Commission's order deprives respondent of only the opportunity to charge more than the use of its property is reasonably worth at the expense of the public in wartime.

It is respectfully submitted that the Federal Power Commission's wartime rate order is just, reasonable, and compensatory and is not repugnant to the due process clause of the Fifth Amendment.

## II.

## THE CIRCUIT COURT OF APPEALS WAS WITHOUT JURISDICTION IN THIS CASE TO REVIEW THE FEDERAL POWER COMMISSION'S "FINDINGS AS TO LAWFULNESS OF PAST RATES" OR DECIDE THE QUESTION OF THE COMMISSION'S AUTHORITY TO MAKE SAID FINDINGS.

On May 26, 1942, the Federal Power Commission, acting upon complaint of the City of Cleveland, and after investigation and hearing, made what the Commission called "Findings as to Lawfulness of Past Rates." (I R. 8-13.)

Hope erroneously dubs the Federal Power Commission's "Findings as to Lawfulness of Past Rates" an "Or-

der" (Petition for Review, IV R. 3, 4, 10), incorrectly asserts that the Commission attempted to "fix" past rates (Petition for Review, IV R. 37, point 23); and devotes six points and five pages of its Petition for Review under the caption "Part B—As To The Commission's 'Findings as to Lawfulness of Past Rates'" to a purported appeal from these findings. (Petition for Review, IV R. 37-41, inclusive; points 22-27, inclusive.)

On September 12, 1942, the City of Cleveland filed with the Circuit Court a timely motion to dismiss Part B of the Petition for Review (IV R. 43, 53) and on September 21, 1942, the City of Akron filed a similar motion with the Circuit Court. (IV R. 155, 161.)

The Court of Appeals nevertheless held the Commission's "Findings as to Lawfulness of Past Rates" were an order, that they were reviewable, and in its judgment set these findings aside as an order. (IV R. 207.)

But the Solicitor General, representing the Federal Power Commission, has suggested in this Court that the Commission's "Findings as to Lawfulness of Past Rates" were not reviewable by the lower court and counsel for the Pennsylvania Public Utility Commission and the City of Akron have joined in raising the issue of the jurisdiction of the lower court. (*Federal Power Commission, et al. v. Hope Natural Gas Company*, October Term, 1943, No. 34, pp. 112-115.)

As a matter of fact, the issue was first raised by counsel for the Hope Natural Gas Company.

At the oral argument before the Federal Power Commission, counsel for Hope conceded that such findings as to lawfulness of past rates are nonappealable, as follows (Milde, C. C. A. 4, Typewritten Record 14,179):

> "We cannot appeal from any recital you make that the rates *were* unreasonable and unlawful in 1916 or 1928 or 1938, or any other time."

This concession was not one improvidently made in the heat of argument. Prior to the oral argument before

the Commission, counsel for Hope filed a printed memorandum with the Federal Power Commission, wherein they said ("Memorandum on Behalf of Hope Natural Gas Company as to the Commission's Jurisdiction in these Proceedings to Adjudge that the Company has in the past Violated the Natural Gas Act," p. 6n):

> "Section 19(b) of the Act does not authorize review of determinations by the Commission even as important as a determination that a company is a natural-gas company under the Act. This Commission has so argued before all courts in which this matter has come up and it has been sustained in this construction. *Canadian River Gas Co. v. Federal Power Commission,* 110 F. (2d) 350, 113 F. (2d) 1010 (C. C. A. 10th, 1940); *New York State Natural Gas Corporation v. Federal Power Commission* (C. C. A. 2d, October 26, 1939, not reported); Cf. *East Ohio Gas Company v. Federal Power Commission,* 115 F. (2d) 385 (C. C. A. 6th, 1940)."

The upshot is that all counsel in this case have at one time or another taken the position that the Circuit Court was without jurisdiction to review mere findings such as the Federal Power Commission's "Findings as to Lawfulness of Past Rates."

The only applicable statute is the Natural Gas Act, Section 19(b), which provides (52 Stat. 831; 15 U. S. C. Sec. 717r(b)):

> "(b) Any party to a proceeding under this chapter aggrieved by an *order* issued by the Commission in such proceeding may obtain a review of such *order* in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the *order* relates is located or has its principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the *order* of the Commission upon the application for rehearing, a written petition praying that the *order* of the Commission be modified or set aside in whole or in part.

A copy of such petition shall forthwith be served upon any member of the Commission and thereupon the Commission shall certify and file with the court a transcript of the record upon which the *order* complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such *order* in whole or in part. No objection to the *order* of the Commission shall be considered by the court unless such objection shall have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do. The finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If any party shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, the court may order such additional evidence to be taken before the commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original *order*. The judgment and decree of the court, affirming, modifying, or setting aside, in whole or in part, any such *order* of the Commission, shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 346 and 347 of Title 28, as amended." (Italics ours.)

Under the Natural Gas Act Section 19(b), the Circuit Court has jurisdiction to review only "orders" of the Federal Power Commission. It has no jurisdiction to review mere findings.

The "Findings as to Lawfulness of Past Rates" from which petitioner attempts to appeal in Part B of the Petition for Review are not an order. They are findings.

These "findings" are not the basis of the Commission's order fixing rates for the future. That order is based on other findings which are attacked in Part A of the Petition for Review. Under the Natural Gas Act, the only finding that is necessary to a rate reduction order is the finding that the existing rate "*is* unjust, unreasonable, unduly discriminatory, or preferential" or that the "existing rates * * * are not the lowest reasonable rates." (Natural Gas Act, Sec. 5(a); 15 U. S. C. A. Sec. 717d; 52 Stat. 823.) In this case, the Federal Power Commission's rate reduction order, fixing future rates, is based solely upon the findings incorporated therewith. These "Findings as to Lawfulness of Past Rates" could have been made on May 26, 1942, even if the Hope company had voluntarily reduced its interstate rates on May 25, 1942, and even if the Commission had never made an "Order Reducing Rates." The Commission expressly made these findings as an aid to state regulation and properly made them in a paper and under a caption separate and apart and different from the findings incident to the "Order Reducing Rates." (I R. 8.) The Federal Power Commission's order fixing rates for the future which is attacked in Part A of the Petition for Review is not based upon the Federal Power Commission's "Findings as to Lawfulness of Past Rates."

The Federal Power Commission's "Findings as to Lawfulness of Past Rates" neither direct nor restrain any action on the part of Hope. They neither command nor direct anything to be done. They carry no direction of obedience to any previously formulated order of the Commission. Cf. *Rochester Telephone Corporation v. United States*, 307 U. S. 125, 129 (1939) (Mr. Justice Frankfurter).

These "findings" are determinations of fact. They are not in substance an order. They are not even in form an order. They have no characteristic of an order, either affirmative or negative. They do not have the effect of an order. Cf. *Columbia Broadcasting System v. United*

*States*, 316 U. S. 407 (1942) (Mr. Chief Justice Stone). They are only a decision on a controverted matter. These findings are a report—an opinion as distinguished from a mandate.

These findings may be evidence in another proceeding of a breach of statutory duty on the part of petitioner. But the Act imposed the duty. The "findings" do not.

The mere fact that these "findings" may be used as evidence against petitioner or its affiliate in another proceeding does not make them reviewable in this one.

Assuming arguendo that they are binding in another proceeding as between parties to the case before the Commission and their privies, unless unsupported by substantial evidence, outside the jurisdiction of the Commission, or otherwise unlawful, the "findings" are subject to challenge in such other proceeding on all these grounds, and petitioner or its privies will have their day in court when and if the findings are offered in evidence against them.

In the Natural Gas Act, Congress has distinguished carefully between orders, which it makes reviewable, and mere determinations, findings, and reports, which it does not make reviewable.

In the body of the statute, for example, Congress specifically mentions "orders" fixing future rates (Natural Gas Act, Sec. 5(a)); "orders" determining accounts in which particular outlays shall be entered, charged, or credited (Natural Gas Act, Sec. 8(a)); "orders" authorizing exporting or importing natural gas to or from a foreign country (Natural Gas Act, Sec. 3); "orders" requiring refund of proposed increased rates collected under bond (Natural Gas Act, Sec. 4(e)); "orders" directing a natural gas company to extend or improve its transportation facilities (Natural Gas Act, Sec. 7(a)); "orders" directing a natural gas company to establish physical connection of its transportation facilities with the facilities of, and to sell natural gas to, any person or municipality engaged or legally authorized to engage in the local distri-

bution of natural gas or artificial gas to the public. (Natural Gas Act, Sec. 7(a)) Congress has authorized the Court of Appeals to review such orders. (Natural Gas Act, Sec. 19(b).)

On the other hand, in the body of the Natural Gas Act, Congress has referred to many determinations, reports, and findings, which it purposefully does not call "orders." For example, there is the determination of cost of production or transportation of natural gas by a natural gas company in cases where the Federal Power Commission has no authority to establish a rate governing the transportation or sale of such natural gas. (Natural Gas Act, Sec. 5(b).) There are reports to Congress on information assembled relative to proposed interstate compacts dealing with the conservation, production, transportation, or distribution of natural gas. (Natural Gas Act, Sec. 11(a)) and reports to Congress relative to operation of a compact between two or more states approved by Congress. (Natural Gas Act, Sec. 11(b).) And there is the determination whether any person has violated or is about to violate any provision of the Act or any rule, regulation or order thereunder. (Natural Gas Act, Sec. 14(a).) These findings, determinations, and reports Congress did not authorize the Circuit Court of Appeals to review. (Natural Gas Act, Sec. 19(b).)

The Petition for Review filed by Hope in the Circuit Court of Appeals set forth two separate and distinct causes of action, one arising under a law of the United States, and the other not arising under a law of the United States. For reasons that have already been made manifest, the latter is entirely outside the federal jurisdiction and subject to dismissal at any stage of the case. It is hardly necessary to say that a federal court is without the jurisdictional power to entertain a cause of action not within its jurisdiction, merely because that cause of action has mistakenly been joined in the complaint with another which

is within its jurisdiction. *Hurn v. Oursler,* 289 U. S. 238, 245-246 (1933) (Mr. Justice Sutherland).

Part B of the Petition for Review should be dismissed because it seeks review of mere "findings." Under Section 19(b) of the Natural Gas Act, it is only an order of the Federal Power Commission and not a finding that the Circuit Court is authorized to review.

The Circuit Court of Appeals was without jurisdiction in this case to review the Federal Power Commission's "Findings as to Lawfulness of Past Rates" or decide the question of the Commission's authority to make said findings. *Shannahan v. United States,* 303 U. S. 596, 599, 601 (1938) (Mr. Justice Brandeis); *Shields v. Utah Idaho Central Railroad,* 305 U. S. 177, 179, 182-183 (1938) (Mr. Chief Justice Hughes); *Federal Power Commission v. Metropolitan Edison Company,* 304 U. S. 375, 385 (1938) (Mr. Chief Justice Hughes); *United States v. Los Angeles and Salt Lake Railroad,* 273 U. S. 299, 309-312 (1927) (Mr. Justice Brandeis); *American Federation of Labor v. National Labor Relations Board,* 308 U. S. 401, 408-412 (1940) (Mr. Chief Justice Stone); *United States v. Atlanta, Birmingham and Coast Railroad Company,* 282 U. S. 522, 527-528 (1931) (Mr. Justice Brandeis).

## SUMMARY OF ARGUMENT.

1. The Federal Power Commission's wartime rate order is just, reasonable and compensatory and is not repugnant to the due process clause of the Fifth Amendment.

The Commission's wartime rate order permits Hope to earn in wartime the same profit and rate of profit which Hope was able to earn when it fixed its own rates in the normal peacetime base period selected by Hope as fair, namely 1937-1939, inclusive.

When the great bulk of the nation's business is operating in a strictly controlled economy under a statutory renegotiation scheme which holds out to industry no promise of war profits materially greater than normal peacetime

profits, in spite of vastly increased volume, it requires considerable temerity for the Standard Oil Company (New Jersey) to claim through this wholly owned subsidiary, Hope Natural Gas Company, that Hope's property is confiscated—that is, stolen—by a wartime order of the Federal Government which permits the Company to earn under wartime conditions the same profit and rate of profit *after all taxes* which it earned in its own selected peacetime base period when it fixed its own interstate rates free of any Government regulation.

If temporary use of Hope's property had been requisitioned by the Government, it does not appear that the just compensation or rental to which Hope would be entitled during this war either by statute or under the Fifth Amendment would exceed the same profit and rate of profit which Hope was able to earn when it fixed its own rates in the normal peacetime base period selected by Hope as fair, namely 1937-1939, inclusive.

Hope's gas is destined for the Cleveland-Akron-Pittsburgh triangle and the price of it enters directly or indirectly into the cost of planes, tanks, ships, and guns for which the American people as a whole must pay.

Since it does not appear that Hope would have been entitled to more if the temporary use of its property had been requisitioned, the Commission's order deprives Hope of only the opportunity to charge more than the use of its property is reasonably worth at the expense of the public in wartime.

It is respectfully submitted that the Federal Power Commission's wartime rate order is just, reasonable and compensatory and is not repugnant to the due process clause of the Fifth Amendment.

2. The Circuit Court of Appeals was without jurisdiction in this case to review the Federal Power Commission's "Findings as to Lawfulness of Past Rates" or decide the question of the Commission's authority to make said findings.

These findings are not an order.

These "Findings" do not have the same effect upon Hope's affiliate in a proceeding before a State commission as a Federal Power Commission order fixing rates for the future. An order fixing rates for the future as long as it remains in effect is absolutely binding upon the affiliate in a proceeding before a State commission. The Federal Power Commission's "Findings as to Lawfulness of Past Rates" are subject to challenge by Hope's affiliate in the proceeding before the State commission upon the grounds that they are unsupported by substantial evidence, outside the jurisdiction of the Federal Commission, or otherwise unlawful, and any order of the State commission adopting such findings is subject to judicial review upon all these grounds as well as upon Constitutional grounds.

It is respectfully submitted that the Federal Power Commission's "Findings as to Lawfulness of Past Rates" were not reviewable in the Circuit Court because they are not an "order."

## CONCLUSION.

Therefore, it is respectfully submitted that the judgment of the United States Circuit Court of Appeals for the Fourth Circuit should be reversed, and that the Federal Power Commission's wartime rate order herein should be affirmed.

## BRIEF FOR THE PUBLIC SERVICE COMMISSION OF THE STATE OF NEW YORK AMICUS CURIAE.

The Public Service Commission of the State of New York having an interest in this litigation, adverse to Hope Natural Gas Company, presents the following brief as *amicus curiae*.

This brief will be confined to the single question as to whether the labor and equipment cost of Hope Natural Gas Company, incurred prior to 1923 in drilling wells, and charged during those years to operating expenses, should

now be added to the capital account in determining the original cost of the property of that company devoted to the public service.

## Statement of Facts.

This is a writ of certiorari granted by this Court on May 17, 1943, to review the judgment of the United States Circuit Court of Appeals for the Fourth Circuit, entered on February 16, 1943, which set aside an order of the Federal Power Commission reducing the rates of Hope Natural Gas Company, and which set aside the Federal Power Commission's "Findings as to Lawfulness of Past Rates."

## Interest of the Public Service Commission of the State of New York.

The Public Service Commission of the State of New York is a state regulatory commission and is charged with the duty of regulating the rates and charges of natural gas companies distributing gas within the State of New York (§72 P. S. L.). In addition, it is empowered to require natural gas companies to keep continuing property records showing the original cost of their property used in the public service.

Section 114 of the Public Service Law of the State of New York in part provides:

> "Temporary rates.—To facilitate prompt action by the commission in proceedings involving the reasonableness of the rates of any public utility and to avoid delay in any such rate proceeding, the commission is hereby authorized to require any public utility company to establish, provide and maintain continuing property records, including a list or inventory of all of the physical property actually used in the public service, and to require any public utility company to keep its books, accounts and records in such manner

as to show currently the original cost of said physical property and the reserves accumulated to provide for the retirement or replacement of said physical property."

The holding of the United States Circuit Court of Appeals for the Fourth Circuit in this proceeding that there should be included in the original cost of the property of the Hope Company amounts expended for labor and equipment in drilling gas wells where it appeared that such amounts had been charged by the company to operating expenses, will directly affect the New York State Public Service Commission in proceedings involving the proper rates and charges of natural gas companies, and in proceedings involving the establishment of continuing property records by such companies.

It has appeared in numerous prior proceedings, and in certain proceedings now pending, conducted by the New York State Public Service Commission, that natural gas companies under its jurisdiction, have charged to operating expenses large sums representing labor cost in drilling gas wells. The establishment of a legal rule that these amounts must be included in the original cost of the property of these companies would directly affect this Commission in the exercise of its statutory duties.

## ARGUMENT.

**The labor and equipment cost of Hope Natural Gas Company incurred prior to 1923 in drilling wells and charged during those years to operating expenses should not now be added to the company's capital account in determining the original cost of the property of that company used in the public service.**

It is the position of the New York State Public Service Commission that the Federal Power Commission in its

opinion of May 26, 1942, properly determined this matter and that the Circuit Court of Appeals in setting aside the order of the Federal Power Commission, and in holding that these expenses must be considered in determining the original cost of the company's property, committed error. It is our position that the Court failed to distinguish between amounts that are properly included in fixing the original cost of the company's property and amounts that would be included in an estimate of what it would cost to reproduce such property under the present prices and under the presently prescribed accounting procedure. In this connection the Court said: "And, even if the prudent investment theory be adopted for determining the rate base, we see no valid reason for excluding these items from the investment." (P. 300).

We further urge that the Court failed to appreciate that the accounting practices under which the cost of drilling wells was charged to operating expenses were, at the time when the expenditures were made, entirely proper and in accordance with the then established accounting procedure. As to this the Court said: "There is little excuse for not considering as capital investment items *erroneously charged to expense.*" (P. 303) (Italics ours.)

**Error in Determining "Original Cost"**

In determining what was the "original cost" of a utility's property there can be no dispute as to whether the majority of expenditures are properly chargeable to operations or to capital. There are, however, certain expenditures that lie on the border line, and under different systems of accounts or under different accounting procedures might properly be included as either an operating expenses or a capital

charge. As to these border line items the books and records of the company are important, for if a particular expenditure was at the time it was incurred properly charged as an operating expense and was so paid and so entered upon the utility's books, it must remain, even though under present practices it would be entered as a capital charge. Such an item cannot be an operating expense when paid and a capital charge for the purpose of a rate proceeding. This is one distinction between a determination of original cost and a determination of the cost of reproducing utility property.

**Error in the holding that these Expenditures were "Erroneously Charged to Expense"**

It is unnecessary to here argue the fairness or propriety of allowing a company that has in past years inflated its operating expenses by including therein amounts that *should concededly* have been charged to capital to include these amounts in the company's rate base. No such situation is presented. It is our understanding that the opinion of the Federal Power Commission, involved in this cause, in no way finds or requires that any conceded capital expenditure should be excluded in fixing rates, even though such an expenditure had been charged to operations.

The disputed items excluded by the Commission and included by the Court were only those that the Commission found had been properly charged to operating expenses under the accounting procedure in force at the time such costs were incurred. It, therefore, appears that the discussion contained in the opinion of the Court that "Consumers pay for service not for the property

used to render it." and that "the revenue paid by the customer for service belongs to the company" and other similar statements have no relevancy. Such discussion would only be material if the Power Commission had based its findings on the theory that proper capital charges must be disregarded in fixing rates if they had originally been charged against operations and therefore paid by the company's customers. It is our position that the proper rule is that if at the time it was incurred a particular expenditure could, under accounting practices then in effect, be considered an operating expense, and if it was so paid and so recorded it must remain on the books of the company as an operating expense and cannot for the purpose of a rate proceeding be considered a capital charge.

If we are correct, and we believe we are, in this argument, the question before this Court narrows to a determination of whether the action of Hope Natural Gas Company in paying as an operating expense the labor and equipment cost of drilling wells was authorized under the practice of natural gas company in effect at the time.

We will restate our position:

**The Labor and Equipment Cost of Drilling Wells by a Natural Gas Company can Properly be Considered an Operating Expense**

In considering the accounting practices of natural gas companies, their specialized operating method must always be kept in mind, and the practices of other types of utilities have little if any application. New gas wells must continually be drilled, not to enlarge or extend the company's operations but simply to maintain its operations and to

enable it to continue to supply gas to its customers. If no new wells were drilled the company's available supply of gas would rapidly decrease and its investment in transmission and distribution mains would be reduced to their scrap value. The drilling of new wells is therefore required if the utility's investment is to kept intact. The labor cost of such well drilling in no way corresponds to expenditures made by an electric, manufactured gas or water company in extending its system to secure additional consumers or to make available increased production. The labor cost incidental to the placing in operation of new wells is in a very true sense an operating expense of a natural gas company. It corresponds to the labor cost required to operate the generating plant of an electric company and so provided the product that the utility is selling or the labor cost required to produce gas at a gas plant of a manufacturing gas company. In the natural gas business the operating company must meet the payroll of men employed in securing a continuing supply of gas to be distributed to the utility's customers. In a manufacturing gas plant the company must similarly meet the payroll of men employed in operating its gas manufacturing plant and so securing a continuing supply of manufactured gas to be distributed to its customers. Can it be said that such labor cost of a manufacturing company is not an operating expense?

That these labor costs can properly be considered as operating expenses is not a novel theory advanced for the first time by the Federal Power Commission. It was the practice of the Hope Company for many years, and it had been the almost universal practice of the natural gas industry. This was pointed out by the Commission when it stated: "It was the consistent practice of the Hope Company up to 1923 to charge the cost of drilling wells to

operating expense. This likewise was the general practice of the new gas industry."

In this connection it appears that the Circuit Court misconstrued the West Virginia law requiring that these types of expenditures be charged directly to capital. Such a requirement does not mean that the accounting practice that had been so uniformly followed was improper. It simply amounted to a determination that the new accounting practice was more desirable. This is understandable. In a regulated utility wide fluctuations in operating expenses should, if possible, be avoided, and since new wells must be drilled, if the continued flow of gas is to be maintained, the utility may during short periods engage in extensive drilling, and if such new wells are productive, may for other short periods temporarily curtail expenses. Operating expenses would increase and decrease, depending on whether or not wells were required.

In view of the peculiar business of natural gas companies, and in view of the almost uniform practice of the industry, we urge that this Court should not hold that the payment by Hope Natural Gas Company through operating expenses of the cost of well drilling was improper at the time these expenditures were incurred, or that the Federal Power Commission improperly excluded such expenditures in its determination of the original cost of the company's property.

**Decisions of State Courts and Regulatory Commissions**

The question of whether any expenditure charged by a utility to operating expenses should be included in the rate base has been considered in numerous proceedings by

state courts and regulatory commissions. Reference to these decisions is included to demonstrate that the accounting practice followed by Hope Natural Gas Company prior to 1923 has received the approval of these state bodies.

*District of Columbia.*

In *Re Potomac Electric Power Co.*, P. U. R. 1917D, 563, 607, the Commission pointed out:

> "Without deciding as to the accuracy of the proposed percentage basis, it appears to this Commission to be contrary to the best interests of all concerned to permit the company thus to revise its operating expenses. Much confusion must inevitably result from such a modification of what has heretofore been understood as 'operating expenses' in the sense in which the term has been used by the company. Owing to the peculiar position occupied by statements of operating expenses in published reports, it is the opinion of this Commission that it is subversive to the intent and purpose of effective regulation to acquiesce in any policy which would deprive such statements of their *bona fide* character, whether in the past or in the future."

*Idaho*

In *Re Kootenai Power Company*, P. U. R. 1924E, 831, 833, the Commission said:

> "When funds are paid out as operating expenses and deducted from gross earnings in determining the net earnings of the company, such expenses should not later be segregated and capitalized against future generations. If this were to be done, such expenses had as well be charged to the capital account in the first place. If these are operating expenses, and are paid as such, that is what they are. They are not operating charges when paid, and capital charges for the purpose of capitalization at a later date by this Commission."

*Illinois*

In *Illinois Commerce Commission v. Commonwealth Edison*, 15 P. U. R. (NS) 404, 405-406, the Illinois Commission said:

> "The company contended that the cost of its physical property as shown by the books did not report the true or actual cost of the company for such property, inasmuch as many items of cost had not been charged to the property account * * *
>
> "* * * These expenditures represent largely items which the company paid during these years for general administrative and supervisory services. It is evident that the company considered these expenditures as a part of its daily operating expenses because it so charged them upon its books and so reported them in its reports to the Commission. It would be improper to allow the company to capitalize on its books now any items (apart, of course, from mere accounting errors) which were charged to operating expenses and so reported in reports to the Commission for the period from July 1, 1913, to the present."

In *Illinois Commerce Commission v. Public Service Commission*, 4 P. U. R. (NS) 1, the Commission pointed out:

> "* * * Neither as a matter of equity or law is it proper for the Commission to permit the inclusion in a rate base of charges already paid for by customers. For the Commission now to sanction this policy would be to result in placing a premium upon charging to operating expenses charges properly belonging to fixed capital accounts, and destroying the purpose and functions of the uniform classification of accounts."

In *People Gas Light & Coke Co.*, 19 P. U. R. (NS) 177, 196, the Illinois Commission said:

> "* * * The practice of the Company in charging administrative, legal, engineering, * * * expenses to operating expenses rather than to fixed capital, did not arise from a mere incidental error upon the part of the company, but seems, rather, to have represented a fixed policy on the part of the management.
>
> "The original cost of the property for rate making purposes may not be increased because of a change in

> the company's policy with respect to the charging of overhead items as between operation and cost of the property * * *."

*Maine*

In *Re Augusta Water District*, P. U. R. 1917B, 653, 656, it appeared that the Commission was fixing the cost of an extension upon which consumers were required to guarantee a certain return. The Commission excluded, among other charges made, salaries paid for superintendence which had been charged to operating expenses, saying:

> "It can make no difference that some of these charges might, under some conditions, go into plant account. They do not do so under the practice pursued by this utility, and cannot be allowed in this case."

Numerous other decisions could be cited but we believe the quoted cases are representative of the attitude of the state courts and regulatory commissions.

## CONCLUSION.

**From the foregoing arguments we believe it has been shown that the labor and equipment cost of Hope Natural Gas Company incurred prior to 1923 in drilling wells should not now be added to the company's capital account in determining the original cost of property of that company used in the public service.**

No. 34.

---

FEDERAL POWER COMMISSION, CITY OF AKRON, AND PENNSYLVANIA PUBLIC UTILITY COMMISSION, *Petitioners*,

v.

HOPE NATURAL GAS COMPANY.

---

## BRIEF ON BEHALF OF THE NATIONAL ASSOCIATION OF RAILROAD AND UTILITIES COMMISSIONERS, AMICUS CURIAE.

---

### OPINIONS BELOW.

The opinion of the Circuit Court of Appeals is reported in 134 Fed. (2nd) 287, and will be found in the record herein in Vol. IV, page 169. The opinion of the Federal Power Commission has not been officially reported, but can be found in 44 P. U. R. (NS) 1, and will be found in the record herein in Vol. I, page 14.

## PRELIMINARY STATEMENT.

The National Association of Railroad and Utilities Commissioners, hereinafter called the Association, is a voluntary association, embracing within its membership the membership the members of the regulatory commissions and boards of the several states of the United States except two, one of which has no state regulatory commission.

By the constitution of the Association, the Executive Committee of the Association may direct the General Solicitor to appear on behalf of the Association (as distinguished from a particular commission represented in it's membership) in any proceeding pending before any court or commission in which, in the judgment of said Executive Committee, appearance on behalf of the Association should be made.

This brief is offered for filing on behalf of said Association, in the general public interest, by direction of the Executive Committee of said Association given in a resolution, adopted by said Committee, reading as follows:

> "Resolved, that the legal representatives of this Association be directed to file an *amicus curiae* brief on behalf of the Association in the *Hope Natural Gas Company* case now pending in the United States Supreme Court, reaffirming the position heretofore taken with respect to valuation for rate purposes in the *Natural Gas Pipeline Company* case."

## STATEMENT OF THE CASE.

A full statement of the case, to which we refer, is contained in the brief of the Petitioners herein, beginning at page 4 of that brief. As a basis for the argument contained in this brief, the following summary statement is made.

The Hope Natural Gas Company, hereinafter called Hope, is a natural gas company which produces natural gas in West Virginia. It sells a part of the gas so produced in that State, and sells the remainder in interstate

commerce to other companies, which make resale thereof to the public in the States of Ohio and Pennsylvania.

On October 14, 1938, upon consideration of complaints before it, the Federal Power Commission entered upon an investigation of Hope's rates and charges, with the purpose of fixing such rates and charges, subject to its jurisdiction, if found to be unjust, unreasonable or discriminatory, upon a just, reasonable and non-discriminatory basis (R. Vol. I, p. 28). With that purpose it held a hearing, and made a valuation of Hope's properties. At such hearing Hope was afforded full opportunity for the introduction of evidence, and for the cross examination of witnesses produced by other parties to the proceeding, and was heard in oral argument.

At the hearing Hope presented evidence as to the original cost of its properties, claiming such cost to be $69,735,637. It likewise produced evidence as to what it termed the "original cost trended to 1938 prices," which was claimed to amount to $105,101,912 (R. Vol. I, p. 193). Hope also introduced evidence of a claimed reproduction cost new of its properties amounting to $97,340,000 (R. Vol. I, p. 163 and R. Vol. IV, p. 171).

In an opinion rendered on May 26, 1942, concerning Hope's evidence of reproduction cost and of trended original cost, the Commission said in part:

> "After full consideration of the estimate of reproduction cost new presented by the Company, we find that it is not predicated upon facts and that it is too conjectural and illusory to be given any weight in these proceedings. * * *
>
> "The Company also presented a trended 'original cost' estimate which exceeded $105,000,000. * * * The evidence discloses fundamental errors in the trending process used. * * *
>
> "In the light of the evidence the conclusion is inescapable that the Company's trended 'original cost' estimate is not founded in fact, but it is basically erroneous and produces irrational results.
>
> "The reproduction cost studies and the so-called trended 'original cost' studies were the typical, hypo-

thetical conjectures which have plagued rate regulation for more than forty years. The actual development and experience of the Hope Company were ignored. In addition, assumption upon assumption as to material and labor costs, and magnified imagination as to overheads were indulged in lavishly. The results have no probative value and accordingly must be condemned." (R. Vol. I, pp. 21-23)

Concerning Hope's claimed original cost, the Commission, in its opinion, said in part:

"The first step in the Company's determination was the taking of an inventory. The inventory units were then priced at estimated cost, including arbitrary overheads. The amounts shown as plant costs by the books were ignored, except for the purpose of aiding in estimating unit costs. As is shown by Table A, the Company's method resulted in a claimed net increase of $17,004,972 over the amount recorded as investment in the interstate properties on its books of account. The Company claims, in other words, that its books fail to show the true cost of such properties in that amount. The items of that amount which are identifiable represent expenditures previously charged to expense accounts. Some of the alleged expenditures were not incurred at all." (R. Vol. I, p. 24)

The Commission, in its opinion, found that the recorded book cost of Hope's properties was $52,730,666, but that certain charges were erroneous, and that certain items had been omitted. Correcting these errors, the Commission found the actual legitimate cost, or gross plant investment to be $51,207,621. (R. Vol. I, p. 36)

Hope claimed that items of expense for well drilling, and other purposes (not appearing on its books as part of its recorded investment), which, under the Commission's present system of accounts, may be charged to capital investment, should now be included in the Commission's finding of original cost. The Commission rejected that contention, for reasons stated at length in its opinion. (R. Vol. I, p. 31) At the same time the Commission did include in its original cost finding items aggregating $1,295,953 representing plant

costs which were originally capitalized and later charged off to operating expenses. (R. Vol. I, p. 35)

The Commission also included, in its rate base finding hereinafter stated, $1,392,021 for the estimated cost of net capital additions up to the end of 1943, also $566,105 for unoperated acreage adjudged useful and $2,125,000 for working capital, including materials and supplies. (R. Vol. I, p. 50)

The Commission found the accrued depreciation of Hope's properties to be $22,328,016. In making this finding the Commission used the so-called straight line depreciation method, to determine the annual depreciation for each year, it applied depreciation rates based upon the estimated service life of property, to the original cost of that property, with proper allowance for salvage value. The service lives, upon which the depreciation rates used were based were determined upon the evidence of a qualified engineer, upon the staff of the Commission, who testified as follows:

> "During the course of the determination of the average service lives of this property, numerous and detailed inspections were made of all classes of property in the system. This includes an inspection of all visible property subject to examination such as structures and compressing station equipment and sample inspections at many points of the underground pipe and buried property comprising the pipeline system. I also made analyses to determine the property retirement experience of the company covering property whose service life had been terminated and the depreciation realized and a review of the maintenance policy and operating practices over the forty-year history of the company. In addition, a study was made of the service age of the principal identifiable units of the company's property. (Service age is the period of time between the date when property is first placed in service and the date of the investigation.) Careful consideration and effect was also given to all of the relevant facts determinable concerning the probable future life expectancy of the principal physical units of property. In addition to the extensive inspection and study of the company's property, there was available during the process

of determining the average service lives for all classes of this property, considerable relevant data from the following sources: (enumerated)" (R. Vol. III, p. 158)

The Commission in its opinion indicated its reasons for attributing no weight to Hope's evidence in support of its claims of original cost, trended cost, and cost of reproduction new. Also, referring to its own finding of original cost, the Commission said:

> "This actual legitimate cost is predicated upon facts and it is the best evidence in these proceedings, so we will employ it for determining the proper and allowable rate base." (R. Vol. I, p. 36)

After indicating the reason for deducting accrued depreciation and for consideration of the other items added to the original cost, as found by it, the Commission said:

> "The Commission, therefore, adopts the foregoing amounts as the interstate rate base for the dates indicated, for the Company's property assembled as a whole and doing business as part of an integrated system. The Commission finds * * * that the rate base for fixing future rates is $33,712,526." (R. Vol. I, p. 50)

The Commission found 6½ per cent to be a fair rate of return for Hope. (R. Vol. I, p. 67) The Commission further found that Hope's earnings under existing rates produced net operating revenues in excess of 6½ per cent upon the rate base found by the Commission in the amount of $3,609,857, and that such existing rates were to that extent unreasonable. It accordingly, by order, prescribed rate reductions designed to reduce Hope's net operating revenues to approximately 6½ per cent upon the rate base found. (R. Vol. I, pp. 1, 70 and 72)

Hope by petition sought a review of the Commission's order in the United States Circuit Court of Appeals for the Fourth Circuit, alleging confiscation of its property (R. Vol. IV, pp. 1 and 19) That court, with one judge dis-

senting, set aside the Commission's order upon grounds which are fully stated in its opinion (R. Vol. IV, p. 169) from which the following excerpts are quoted:

"The vital questions in the case relate to the determination of the rate base; and, in view of the low rate of return allowed and the consequent lack of margin to take care of error in the base, the rates allowed must be condemned as unreasonable and confiscatory because of the following errors with respect to the valuation of the property constituting the base; (1) the Commission did not find the present fair value of the property and took no account of the change of price levels in determining the rate base; (2) the Commission ignored items of well drilling costs and overhead, aggregating in excess of $17,000,000, which entered into the original cost of the property, basing this action on the fact that, under the system of accounting that prevailed at the time, these items had been charged on the company's books to expense; and (3) the Commission ignored evidence as to the present condition of the property and computed accrued depreciation theoretically on the straight-line service-life method." * * * (R. Vol. IV, p. 172)

"The report of the Commission shows, not only that it gave no consideration to rise in price levels in determining the amount of the rate base, but also that it made no attempt to ascertain the present fair value of the property involved. It adopted as the rate base the original cost of the property as shown by the company's books, adjusted to correct bookkeeping errors and depreciated as above indicated." * * * (R. Vol. IV, p. 172)

"Not to be confiscatory, rates must allow a fair return upon the present fair value of the property. To determine this fair return upon present fair value, the Commission must find what the present fair value of the property is." * * * (R. Vol. IV, p. 184)

"In the pending case, original investment cost cannot be taken alone as a measure of the present fair value of the property because of the great changes in the prices of labor and materials which have occurred over the more than forty years during which the investments in the property have been made. These

changes are matters of general and common knowledge and are shown by many publications, statistical reports and other documents readily available. That such changes have occurred is shown also by the evidence offered before the Commission. It is true that the statements of reproduction cost and trended original cost fail to allow for the increased productivity of labor and fail to take account of other pertinent factors; and the Commission, we think, was justified in refusing to accept the conclusions therein contained. But this does not mean that the Commission could ignore the change in price levels which was clearly established and was matter of general and common knowledge otherwise. The Commission's staff prepared statements showing that the conclusions of Hope's reproduction cost and trended cost statements should not be accepted. They could doubtless have furnished estimates as to the proper effect to be accorded price trends in the correct valuation of the property. At all events, the Commission should have given consideration to the matter; and, if of opinion that investment cost was a true measure of the present value of the property notwithstanding increase in prices, it should have found this as a fact. It could not absolutely ignore the fact of increased price levels in determination of present fair value." * * * (R. Vol. IV, pp. 180-181)

"The Commission computed accrued depreciation by applying the straight-line service-life method to its properties, i. e. by finding a rate of depreciation based on the average service life of property, multiplying this by the years the property had been in use, and applying this percentage to the book cost of the property." * * * (R. Vol. IV, p. 189)

"Many of the consequences complained of will be eliminated when the present value of the property is considered in the light of changed price levels and the depreciation percentage is applied to the higher valuations resulting. We think, however, that the Commission may not close its eyes to the actual present condition of the property in determining present value and compute depreciation on the basis of mere formulas, as it has done in this case." * * * (R. Vol. IV, p. 190).

"It is clear, we think, that annual depreciation must be computed on the basis of the present fair value of the property." * * * (R. Vol. IV, p. 194)

## QUESTIONS TO BE ARGUED HEREIN.

This brief is filed in support of the following propositions:

1. The court below erred in holding that the Federal Power Commission did not find the present fair value of the properties of Hope, in the sense that "fair value" is required to be found by the decisions of this court.

2. The court below erred in holding that the Commission gave no consideration to relevant matters of common knowledge nor to the evidence as to changes in price levels which had occurred since Hope started operation.

3. The court below erred in holding that the Commission was required, as a part of the rate-making process, to determine price trends during the history of the property valued and the effect thereof upon the reproduction cost of such property, and to give effect thereto in fixing the rate-making value of such property.

4. The court below erred in holding that the Commission should have included in its finding of original cost the items of expense for well drilling and other purposes which were charged to operating expenses by Hope, when the same were incurred, and hence were not included as capital cost items by the Commission.

5. The court below erred in holding that the Commission determined the accrued depreciation of Hope's property with eyes closed as to the actual present condition of the property and without consideration of such actual condition.

6. The court below erred in holding "that annual depreciation must be computed on the basis of present fair value of the property."

7. The court below erred in holding the rates prescribed by the Commission to be unreasonable and confiscatory.

## SUMMARY OF ARGUMENT.

1. The Commission found the "fair value" of Hope's property in the sense that "fair value" is required to be found under the decisions of this Court. The decision below to the contrary is based upon a misconstruction of what the Commission did. The two sentences in the Commission's opinion, upon which the Court below seized, to support its misconstruction, do not have the meaning attributed to them below, when read with their context, and in the light of the entire opinion.

The Commission recognized its duty to find a rate base, it discussed Hope's evidence, and stated its reasons for not giving weight to the same, and also its reasons for considering its own original cost finding "the best evidence"; and it announced its purpose to employ its own finding "for determining the *proper* and *allowable* rate base." The Commission likewise discussed its reasons for deductions from and additions to original cost, as found by it, and announced the rate base adopted "for the company's property assembled as a whole and doing business as part of an integrated system."

In *California Railroad Commission* v. *Pacific Gas and Electric Co.*, 302 U. S. 388, an almost precisely similar case, the Commission did not denominate its rate base finding as "value" or "fair value" but the court sustained the rate order based thereon.

2. The Commission was not required to make a reproduction cost finding, by the use of price trends, or by any other method. In effect, the court below ruled that it is an indispensable part of the rate-making process for the Commission to make a reproduction cost estimate by some method.

To obligate the Commission to use price trends is the equivalent of prescribing a formula for finding rate value, which, in applicable decisions, this Court has held the Constitution does not contemplate.

3. The decision below, that the rate-making method followed by the Commission in this case was unconstitutional, invites an amplification of the pronouncement made by this Court in *Federal Power Commission* v. *Natural Gas Pipeline Co. case*, 315 U. S. 575. In the Association's brief in that case argument was made at some length, here repeated, that the *Smyth* v. *Ames* rule, properly understood and applied, leaves freedom to rate-making agencies to value property for rate-making purposes according to its own independent judgment, and that, under applicable decisions, rate-making value may be based upon original cost evidence.

In the *Natural Gas Pipeline Company case*, this court made a pronouncement which is believed intended to affirm such a construction of such applicable decisions. It is suggested that it is desirable that the Court in this case make clear that such pronouncement was so intended.

4. The Commission properly used the straight-line method in determining the extent of accrued depreciation, and computed such depreciation upon the original cost of the property depreciated. The opinion in *United R. & E.* v. *West*, 280 U. S. 234, requiring depreciation to be based on the present "fair value" of the property, is unsound, and should be over-ruled. It is unsound because it lays down a rule impossible of application.

In determining depreciation in this case, the Commission did not proceed with its eyes closed, nor without considering the actual condition of the property. The rates of depreciation used were estimated by a competent engineer, who carefully inspected the property to be valued, and estimated depreciation lives upon consideration of the age and condition of such property.

5. The Commission properly refused to include in the original cost found well drilling costs and overheads connected therewith which were charged to operating expenses when incurred, in accordance with an established policy of the company.

6. The pronouncement of the court in the *Natural Gas Pipeline Co. case* is construed to mean that a regulatory commission may determine its own formula for finding value. The decision below evidences that the pronouncement is not so understood by some Judges of eminence. An amplification of the pronouncement would accordingly aid regulatory commissions and federal and state courts.

The pronouncement in the *Natural Gas Pipeline Co. case*, as construed in this brief, appears to leave the law exactly as it should be. No single formula for finding rate base value should be prescribed, but rate regulatory commissions should be free to determine rate-making formulas.

7. The Commission's order, viewed in its entirety, produces no arbitrary result.

## ARGUMENT.

### The Commission Found the Fair Value of Hope's Property, in the Sense That "Fair Value" is Required to be Found Under the Decisions of This Court.

The decision of the court below is based upon a misconstruction of the Commission's decision, which the court places upon that decision by reason of certain language in the Commission's opinion. In this respect the case is identical with *California Railroad Commission* v. *Pacific Gas and Electric Company*, 302 U. S. 388, as will be later pointed out herein.

In its opinion in the case now before this court, the Commission at one point said:

> "With the decline in favor of the doctrine of 'fair value' as the only mode of public utility rate regulation, its keystone, reproduction cost, crumbles. Bona fide investment figures now become all important in the regulation of rates." (R. Vol. I, p. 32)

The court below, in its opinion, seized upon these sentences in the Commission's opinion, and treated them as

the equivalent of a ruling by the Commission that bona fide investment constitutes the rate base, and that other evidence was to be ignored.

The Commission did in fact base its finding of a rate base upon original cost, to which, in making its finding, it simply added other items of expense by Hope, which the Commission found justly ought to be taken into consideration. Because the Commission chose to adopt that formula in making its finding, the Court of Appeals ignored the fact that the Commission made a finding. Pointing to the language of the Commission quoted above (R. Vol. IV, p. 172), the court treated the Commission's action and opinion as establishing that (1) "the Commission did not find the present fair value of the property and * * *, (2) * * * ignored items of well drilling cost and overhead * * *, and (3) * * * ignored evidence as to the present condition of the property and computed the accrued depreciation theoretically * * *."

The court thus attributed to the above quoted declaration by the Commission, respecting the decline in favor of the doctrine of "fair value" and respecting the "all important" character of bona fide investment, a significance which plainly is not tenable, when that declaration is read with its context, and in the light of the entire opinion of the Commission.

The declaration is found in the Commission's discussion of Hope's claim, made for the inclusion in original cost, and for reflection in the rate base found, of various items of expense which Hope claimed were incurred in the acquisition of property. Hope had included these items in its claimed original cost, and, in its claimed cost of reproduction new, had likewise included the estimated cost of reproduction new of the property alleged to have been acquired by said claimed expenditures.

The items in question were not found recorded in the investment accounts, but were alleged to have been charged to expense. The Commission refused to recognize the inclusion of such items as capital, saying that the attempt

thus to recast books of account, upon the basis of an inventory, with items of property priced at "estimated 'actual cost'" is the equivalent of estimating reproduction cost, which has fallen into disfavor; and that such an "estimated 'original cost'" represents an attempt to tamper with bona fide investment figures, which have now become "all important", by applying to the determination of actual cost "the reproduction cost *process* * * * permeated with conjectural estimates." That the declaration had no broader application is plain, when it is read in its context, which we here quote as follows:

> "The past determinations of the items constituting plant investment were deliberate, conscious acts on the part of management at the time of the transactions. A decision obviously must be made when an expenditure occurs as to whether it represents an investment in plant or an expense. There must also be some finality to these decisions. If they are treated as expenses at one time and as plant investment subsequently, chaos in rate-making and in corporate finance will prevail. * * * The Company kept plant and expense accounts throughout its history and conformed to the general business practices of the industry and like business institutions. It was evidently thoroughly convinced as to the propriety of its decisions, as witness its claim before the West Virginia Commission in 1921, that the very expenditures in question were operating expenses. The Company is now estopped from re-accounting for those expenditures.
>
> "With the decline in favor of the doctrine of 'fair value' as the only mode of public utility rate regulation, its keystone, reproduction cost, crumbles. Bona fide investment figures now become all important in the regulation of rates. Immediately, however, we find an effort to tamper with these. There is in progress an attempt to make the reproduction cost *process* survive in the determination of actual cost of or investment in plant. Thus, in this case an inventory was taken and then units were priced at the estimated 'actual cost.' The method should be condemned at the threshold. For in addition to being permeated with conjectural esti-

> mates, it gives no heed to the realities of past events. Consistent treatment of expenses and plant investment costs is indispensable to the successful operation of the regulatory system." (R. Vol. I, p. 32)

The Commission unquestionably made no finding of the true cost of reproduction; and its reference to the decline in favor of the "fair value" doctrine "as the only mode of utility rate regulation," plainly had reference to a method of determining a rate base in which a reproduction cost determination was considered as an indispensable element for consideration.

The Commission recognized its duty to find a rate base. In making such finding it considered the estimates which Hope had introduced and indicated its reasons for not giving weight either to the original cost claimed or to the claimed "trended original cost or to the claimed reproduction cost new." Thereupon, referring to its own finding, the Commission said:

> "This actual legitimate cost is * * * *the best evidence* in these proceedings, so we will employ it *for determining* the *proper* and allowable rate base." (R. Vol. I, p. 36)

Having stated its reason for considering its original cost finding as the best evidence upon which to rest a rate base finding, the Commission stated its reasons for deducting its estimate of accrued depreciation, and its reasons for certain additions, saying: "The Commission, therefore, adopts the foregoing amounts as the interstate rate base for the company's property assembled as a whole and doing business as part of an integrated system. The Commission *finds* * * * that the rate base for fixing future rates is $33,712,526." (R. Vol. I, pp. 36 and 50)

In the face of the language of the Commission's opinion, to which we have above adverted, it appears plain that the court below erred in saying that the court "ignored" the evidence offered by Hope, or that it did not find the present

fair value of the property involved, unless (1) the constitution requires that such finding be based upon reproduction cost or (2) the constitution requires that such a finding must expressly denominate the rate base finding a finding of fair value. The constitution requires neither, as this court has expressly held in recent decisions.

In *California Railroad Commission* v. *Pacific Gas and Electric Company*, 302 U. S. 388, the California Railroad Commission had received evidence presented by the utility as to the reproduction cost of its property, but had refused to make use of the same in determining the rate base, stating in its report, that it found the same unsatisfactory. In its report the Commission said:

> "During its entire history in establishing reasonable rates for utilities similar to this company, to determine a proper rate base this Commission has used the actual or estimated historical costs of the properties undepreciated, with land at the present market value. * * * This historical method has dominated the Commission's findings for several principal reasons." (302 U. S. 394)

The United States District Court enjoined the enforcement of the Commission's rate reduction order upon the ground that the Commission had failed to find the fair value of the property in accordance with the requirement of decisions of this court. The District Court pointed to the above quoted language in the Commission's report and said:

> "An examination of the opinion and order of the Railroad Commission shows that they did not undertake to ascertain the fair value of the property nor a fair return upon that value. They did fix the rate base at approximately the historic cost and estimated the fair return on that base as $7,000,000. * * *
>
> "In view of the rejection by the Commission of all evidence concerning the cost to reproduce the property, and in the absence of a specific finding as to the fair value of the property, the question is whether the de-

cision of the Commission can stand as against a charge that the plaintiff had been denied due process of law. * * *

"It is clear from the decision of the Supreme Court in West v. C. & P. Tel. Co., supra, that it is a denial of due process for the state regulatory body to refuse to consider proper evidence of the cost of reproduction and that rates fixed in that manner are illegal and void. A fortiori, it is a denial of due process to refuse to consider any evidence of the cost of reproduction." * * * (13 Fed. Supp. 935-936)

It would seem that the cited case and the case now before this court were as precisely similar as it would be possible for two cases to be. When the *Pacific Gas and Electric case* was decided here, this court brushed aside the misconstruction which the District Court had placed upon the Commission's decision. Recognizing the right of the Commission to reject evidence considered by it, if found not entitled to weight, the court said:

"'The Commission was entitled to weigh the evidence introduced, whether relating to reproduction cost or to other matters. The Commission was entitled to determine the probative force of respondent's estimates. That the Commission did so is apparent from both its statement to that effect and the reasons it gives for considering these estimates to be without positive value. * * * Nor did the ruling with respect to the weight of evidence as to reproduction cost leave the Commission without evidence of the value of respondent's property. We have frequently held that historical cost is admissible evidence of value. * * * In the instant case we cannot say that the Commission in taking historical cost as the rate base was making a finding without evidence and therefore arbitrary. * * * The Commission specifically found what it considered to be the rate base. 39 Cal. R. C. supra, p. 76. The Commission found that rate base to be reasonable. Id. p. 77, note. The import of its opinion is that the rate base represented the Commission's conclusion as to the value which should be placed upon respondent's property for the purpose of fixing rates.' (302 U. S. 388, 397, 398, 399, 400)."

In this case, now before the court, the Commission's opinion, read as a whole, demonstrates that the Commission gave much consideration to the evidence offered by Hope, and refused to give weight to the same for reasons which were persuasive to it; and that it treated original cost, as determined by the Commission, and other items of expenditure which it held entitled to consideration, as "evidence" for determining a "*proper* and *allowable* rate base." The entire opinion evidences an intent to deal fairly with the utility, and various important questions which might have been determined adversely to the utility were decided in its favor.

It is plain, upon a reading of the entire opinion, that the Commission understood its duty to find a fair rate base, and that it made such finding upon a proper consideration of all the evidence before it.

**The Commission Was Not Required to Make a Reproduction Cost Finding by the Use of Price Trends or by Any Other Method, Nor to Denominate Its Rate Base Finding as a Finding of "Value".**

The ruling in the court below is the equivalent of a holding that it was the Commission's duty, as a part of the rate-making process, to make an estimate of the present reproduction cost of Hope's properties. The court below concurred with the Commission, as to the untrustworthy character of Hope's evidence, both as to reproduction cost and as to trended original cost, saying:

> "It is true that the statements of reproduction cost and trended original cost fail to allow for the increased productivity of labor and fail to take account of other pertinent factors; and the Commission, we think, was justified in refusing to accept the conclusions therein contained. But this does not mean that the Commission could ignore the change in price levels which was clearly established and was matter of general and common knowledge otherwise. The Commission's staff

prepared statements showing that the conclusions of Hope's reproduction cost and trended cost statements should not be accepted. They could doubtless have furnished estimates as to the proper effect to be accorded price trends in the correct valuation of the property. At all events, the Commission should have given consideration to the matter; and, if of opinion that investment cost was a true measure of the present value of the property notwithstanding increase in prices, it should have found this as a fact." (R. Vol. IV, p. 180)

The court below thus, in effect, ruled that it is an indispensable part of the rate-making process, when substantial changes in price levels have occurred during the history of the property involved, for the Commission to make an estimate of reproduction cost by some method. Price trend evidence unrelated to the property to be valued would be of no significance. There must be an inventory of the property, to which the evidence may be applied. The price and the date of acquisition of each piece of property must be known. The original cost price can then, by application of the price trend from the time of purchase of such property until the date of valuation, be translated into the "trended original cost price," as of the date of valuation, and an aggregate trended original cost price can thereby be obtained.

It is obvious that this is nothing more nor less than a reproduction cost estimate made by a new method, no less hypothetical than the old estimated reconstruction method.

To hold that the Commission was obligated to determine price trends, and to make use of them in determining the rate base, is the equivalent of prescribing a formula for finding rate value, which this court has repeatedly decided the constitution does not impose. *Minnesota Rate Cases*, 230 U. S. 352, 434; *Los Angeles Gas and Electric Corp.* v. *Railroad Commission*, 289 U. S. 287, 306; *Federal Power Commission* v. *Natural Gas Pipeline Company*, 315 U. S. 575, 586.

In the *National Gas Pipeline Company case* just cited, the utility offered evidence of reproduction cost value, without inclusion therein of any amount to cover the going concern element. For the going concern element it made a claim of $8,500,000, and offered much evidence in support thereof.

The Commission disallowed the $8,500,000 claim, saying:

> "The companies' claim of $8,500,000 for going concern value must be disallowed. The amount obviously is an arbitrary claim, not supported by substantial evidence warranting its allowance. Its allowance would mean the acceptance of a deceptive fiction, resulting in an unfair imposition upon consumers. We are convinced that we are allowing in our rate base more than an adequate amount to cover all elements of value.
>
> "In disposing of the motion for interim order, we are accepting at this time the companies' estimates of

| | |
|---|---|
| Reproduction Cost New of Physical Properties (exclusive of Gas Reserves) .... | $56,302,250 |
| Value of Gas Reserves ..... | 13,334,775 |
| Capital additions for the period June 1, 1939 to December 31, 1942 ..... | 3,808,399 |
| Working capital ..... | 975,000 |
| Total Rate Base ..... | $74,420,424 |

> "The foregoing amount allowed as a rate base may be compared with book cost of properties, plus working capital of $975,000, as of December 31, 1939, totaling $60,952,279, and therefrom it is clearly disclosed that the rate base presently allowed herein is liberal."

Upon the rate base so found the Commission, in an interim order, ordered a reduction of rates. This order was set aside by the Court of Appeals upon the ground that the Commission had failed to make any allowance for the going concern element. In reaching this conclusion, the Court of Appeals followed the same line of reasoning as has been followed by the Court of Appeals in this case, pointing out that the rate based used was identical with the reproduction cost claimed by the utility. In this connection also the court said:

"Moreover, in its opinion, the Commission said, 'The companies' claim of $8,500,000 for going concern value must be disallowed. The amount obviously is an arbitrary claim, not supported by substantial evidence warranting its allowance.'" (Natural Gas Pipeline Company, et al v. Federal Power Commission, 134 Fed. (2d) 287)

That decision of the Court of Appeals, in the *Natural Gas Pipeline Company case*, this court over-ruled, pointing out that, while no item for going concern value was separately stated in the Commission's opinion, the Commission spoke of the rate base arrived at as "liberal" and as a "generous allowance." The court thus treated the finding of the Commission, which was not denominated a finding of value, as a finding which met the requirements of the constitution, as construed by this court. Thus again, as in the *Pacific Gas and Electric case*, above cited, the court refused to isolate a fragment of a Commission opinion, or report, and to allow the language of such isolated fragment to support a ruling that the Commission had failed to do what a reading of the entire opinion or report, fairly indicates, that the Commission in fact did.

The decision in the *Natural Gas Pipeline Company case*, accordingly established the rule to be that a regulatory commission is not required by the constitution to make a reproduction cost finding, or expressly to denominate its rate base as a finding of "value" as a part of the rate-making process.

The attack which is made in this case upon the Commission's rate order, based upon the claim that the method which it followed in reaching a rate base was unconstitutional, because such rate base was rested, in substantial part, upon evidence of original cost, invites an amplification of the pronouncements heretofore made by this court touching that subject. In the *Natural Gas Pipeline Company case* the Association, in an *amicus curiae* brief, asked for a clear pronouncement covering the subject.

The paragraphs following, under the caption "Paragraphs from the Association's Brief in the Natural Gas Pipeline Company Case", are deemed as applicable to this case as they were in the *Natural Gas Pipeline Company case.*

**Paragraphs from the Association's Brief in the Natural Gas Pipeline Company Case.**

Under the decisions of this Court, the test as to the constitutional validity of rates, fixed by legislative authority, has been the sufficiency of such rates to yield a fair return on a rate base, which the Commission has denominated "fair value."

The fair value tests was first announced in *Smyth* v. *Ames*, 169 U. S. 466. The language of that case is often referred to as the *Smyth* v. *Ames* rule. It is obvious, however, that it is no rule at all, beyond its requirement that "fair value" be found, and used as a basis for determining rates which the owner of the property involved must be permitted to earn to avoid confiscation.

The use of reproduction cost estimates became common, and was treated as proper by this court. *Denver* v. *Denver Union Water Co.*, 246 U. S. 178, 191. In *Southwestern Bell Tel. Co.* v. *Public Service Commission*, 262 U. S. 276, the court went so far as to set aside the Commission rate order involved in that case, because it appeared from the Commission's report that it had not based its findings of fair value upon reproduction cost prices as of the date of the valuation. See also *McCardle* v. *Indianapolis Water Co.*, 272 U. S. 400, 410.

The cost and delays incident to recurring reproduction cost estimates were so great that attempts were made to obviate the necessity for them by the development of cost indices showing the trend of reproduction cost prices, which could be used to indicate the change in the reproduction cost of property from one date to another. The difficulties

inherent in the attempts, or in the manner in which they were used, led to the rejection of their results in court. *West* v. *Tel. Co.*, 295 U. S. 662, 667. *Ohio Bell Tel. Co.* v. *Public Utilities Commission*, 301 U. S. 292, 296

The results of attempting to follow this *Smyth* v. *Ames* rule, as it had been thus developed are well known. They were commented upon in the dissenting opinions of Mr. Justice Brandeis in *St. Joseph Stockyards Co.* v. *United States*, 298 U. S. 73, 84, and, of Mr. Justice Black in *McCart* v. *Indianapolis Water Co.*, 302 U. S. 419, 435.

Some Commissions refused to undertake to make physical valuations under the *Smyth* v. *Ames* rule, and frankly followed the practice of treating the investments of companies as a sufficient basis for determination of their rate bases. Notable among these was the Railroad Commission of California.

This practice of the California Commission came squarely before this court in *Railroad Commission* v. *Pacific Gas and Electric Co.*, 302 U. S. 388, above cited.

As originally expressed, the so-called *Smyth* v. *Ames* rule had not exalted reproduction cost evidence above every other class of evidence mentioned, nor held that reproduction cost represented minimum fair value, to which additions must be made for other elements of value, if existing. Care had been taken by the Court in *Smyth* v. *Ames* to make it clear that the enumeration of elements to be considered was not designed to be exclusive, and that the weight to be attributed to each class should be what the valuing tribunal deemed "just and right in each case." The Court was not laying down a rule to deprive legislators and legislative rate making-agencies of the exercise of their judgment. *Minnesota Rate Cases*, 230 U. S. 352, 434.

When Mr. Justice Hughes had become the Chief Justice, and came to write the opinion in the *Pacific Gas and Electric Company* case, from which we have quoted, he but expressed again what he had said more than twenty years

before. The opinion in the *Pacific Gas and Electric Company case* simply cleared away excrescencies from the rule as originally expressed by Mr. Justice Harlan.

Under the law, as recognized and emphasized in the later opinion, a rate-making agency may weigh the relevant evidence before it, and, attributing to each piece of evidence the weight it considers just, may determine the amount upon which the owner of the property regulated should be permitted to earn a return; and within the limits of the constitutional rule, which forbids confiscation, its decision is final.

There is no requirement in the constitution, nor in the decisions of this court, which compels a regulatory agency to attempt to segregate the intangible elements of a utility's property, such as its established business, from its tangible physical properties, and to determine and state a value for such intangible elements.

We join with counsel for the gas companies in considering that clarification of the situation is necessary, and join them in asking for it. Our view is that a clarification is necessary for the purpose of enabling such commissions, with confidence, to apply the rule announced in *Smyth* v. *Ames*, according to its original intent, as reestablished by the opinion in the *Pacific Gas and Electric Co. case*.

We ask the Court to make it clear that a rate regulatory commission may make its determination of the rate base without any attempt to determine the reproduction cost of properties, unless the evidence before the commission is such as to show that justice requires such cost to be estimated and considered in fixing the rate base.

It ought not to lie within the power of a utility to compel a regulatory commission to choose between expending large sums of public money to make reproduction cost estimates (which the commission knows to be not necessary for a just appraisal), or to allow a one-sided record to be made by the utility, at the expense of the rate payers, in which professional, so-called experts will present evidence of val-

uations which will consume months of time in the presentation, but will, when presented, be of no aid to the commission in reaching its determination.

If it is the judgment of the commission that estimates of reproduction cost will, in fact, be less dependable than original cost, as an aid in the determination of a proper rate base, why should the commission be compelled to consume months or years in either making or receiving such estimates? If, after the record is made, the commission may exercise its judgment to attribute controlling weight to original cost, and to disregard reproduction cost estimates, —as it may under the Pacific Gas and Electric Co. opinion, —may it not use its judgment, before the estimates are made, and rule that it will exclude such evidence.

If the Court will make such a pronouncement, it will protect the rights of all parties. It will save vast amounts of money now being wasted in the preparation and presentation of such estimates, and it will enable the regulatory commissions of the country to perform their rate making function more effectively, because they will be enabled to avoid the expense and the interminable delays which are inevitable, when utilities may demand the right to make and present reproduction cost appraisals.

The right of utilities to judicial protection against confiscation would not be jeopardized by such a pronouncement, since a utility always could come into court upon a claim of confiscation. When the facts are such as to make necessary a determination of the reproduction cost to avoid confiscation, the Court can act, if such determination is denied by the regulatory commission. For example, if we should come into a period of extreme inflation, when a rate base equal in dollars only to the original cost incurred prior to the period of inflation would be manifestly unjust, the commission would adopt means to make the rate base reflect the decreased value of the dollar, or it would permit reproduction cost estimates to be shown. If it failed to do this, the Court, upon review could grant relief.

Such a pronouncement as we are suggesting would restore to the commission the right to exercise judgment, which the court intended to preserve under its opinion in the *Smyth* v. *Ames* case.

In the *Pacific Gas and Electric Co. case* this Court restored the rule. What is now needed is a declaration which shall make clear the full import of that decision, so that a commission may exercise its judgment as to whether the rate base ought justly to be determined upon consideration solely of original cost evidence, or of reproduction cost evidence, or of both; and so that, when it has determined that either class of evidence will not be helpful, it may refuse to receive the same.

## The Pronouncement of the Court in the Natural Gas Pipeline Company Case.

In the *Natural Gas Pipeline Company case* the Court made a pronouncement, which, as we construe that opinion, fully covers this case, and establishes the right of a rate regulatory commission to exercise its judgment as to the method whereby it will find the rate base, provided only that the demands of due process are duly met. In its opinion the Court said:

> "By long standing usage in the field of rate regulation the 'lowest reasonable rate' is one which is not confiscatory in the constitutional sense. * * *
>
> "The Constitution does not bind rate-making bodies to the service of any single formula or combination of formulas. Agencies to whom this legislative power has been delegated are free, within the ambit of their statutory authority, to make the pragmatic adjustments which may be called for by particular circumstances. Once a fair hearing has been given, proper findings made and other statutory requirements satisfied, the courts cannot intervene in the absence of a clear showing that the limits of due process have been overstepped. If the Commission's order, as applied to the facts before it and viewed in its entirety, produces no arbitrary result, our inquiry is at an end." (315 U. S. 575, 586)

As we understand that pronouncement, every rate regulatory commission is free to adopt such valuation methods as in its judgment will enable it to determine rates which are "not confiscatory in the constitutional sense," provided that it acts after a fair hearing, makes findings which meet the requirements of the constitutional rule, as declared by this Court, and provided that it satisfies the requirements of the statute under which it acts.

If an order so made is complained of, the Court is not concerned with the formula which the commission has followed in finding the rate base, but only in determining whether the order "viewed in its entirety" produces a result which impresses the judicial sense as arbitrary and beyond the bounds of reason.

**The Occasion for an Amplication of the Pronouncment of the Court in the Natural Gas Pipeline Company Case.**

If our construction of the pronouncement of the Court in the *Natural Gas Pipeline Company case* is correct, we believe that it leaves the law in exactly the form in which it should be. We urge that the Court should not prescribe any formula for the finding of the rate base, but should leave legislative rate-making agencies free to exercise discretion and judgment, subject only to the power of the Court to relieve from a rate order manifestly arbitrary, because not made upon a due process of law hearing, or not supported by substantial evidence.

Under the pronouncement, as we construe the same, a regulatory commission which determines that a fair rate base may be found by using the original cost method, followed by the commission in this case, may not only permit such evidence to outweigh reproduction cost evidence which may have been offered and received, but it may refuse to admit such reproduction cost evidence, for the reason that the same will not be usable under the formula adopted by the commission.

Contentions made in this case, and the opinion of the court below, make it clear that the pronouncement in the *Natural Gas Pipeline Company case* is not given the construction which we have attributed to it by some able utility counsel and by some judges of eminence. It is, accordingly, suggested that it will aid regulatory commissions, federal and state, in the performance of their respective duties, in the regulation of rates or in the review of rate regulatory orders, if the Court will so amplify the pronouncement as to make its meaning clear beyond misconception.

In this connection, it is suggested that, as a result of the long continuance of the so-called fair value rule, establishing rights under the federal constitution, it has come about that the laws of the states generally, under the specific provisions of state constitutions or statutes, or under decisions of the state courts expounding such constitutions or statutes, require that rates prescribed by state regulatory agencies must afford a fair return upon "Value." A pronouncement, accordingly, declaring that, under the Natural Gas Act, the Federal Power Commission should base rates upon net investment would not relieve state regulatory agencies from the duty to conform their acts to the requirements of applicable laws, whereas a pronouncement making it plain that value, in the sense that such term is used in the decisions of this Court, dealing with the constitutional rights of carriers and public utilities, may be found by a regulatory commission by any formula which is consistent with the requirements of due process, will undoubtedly be accepted as guiding by the state courts, in cases involving application of the laws of their respective states.

## The Commission Did Not Err in Its Determination of Accrued Depreciation.

The Commission used the straight-line method in determining the amount of accrued depreciation, and computed such depreciation upon the original cost of the property

depreciated. Use of the straight-line method was approved by this Court in the *Natural Gas Pipeline Company case* 315 U. S. 575.

In applying the straight-line method, the Commission properly computed the depreciation upon the basis of the original cost of the property involved. This point was discussed in the brief filed by the Association in the *Natural Gas Pipeline Company case*. The paragraphs appearing below, under the caption "Paragraphs from the Association's Brief in the Natural Gas Pipeline Company Case Discussing the Determination of Depreciation" are deemed applicable in this case.

**Paragraphs from the Association's Brief in the Natural Gas Pipeline Company Case Discussing the Determination of Depreciation.**

The gas companies contend that the amount to be amortized is the present fair value of their property. They rely upon the opinion of this court in *United R. & E. v. West*, 280 U. S. 234, 253. That opinion unquestionably supports their claim. We submit that the opinion is unsound and should be overruled.

The opinion is unsound because it lays down a rule which it is impossible for regulatory commissions to adopt and follow.

Such commissions have been given authority to issue orders, and to require annual or periodic reports, so that the true financial results of the operations of regulated properties may be readily known to the commissions. Orders prescribing charges which may be made to operating expenses for depreciation must be, accordingly, orders which the regulated companies may understand and comply with, and they must be orders failure to comply with which may be readily observed and proved, so that the commissions can enforce the same.

It is not possible to frame an accounting order, to provide for the charging to operating expenses of depreciation of the various classes of utility property to be determined upon the basis of the fluctuating cost of reproducing such property, which will enable the regulated companies to know the amounts which they are required to charge, or which can, as a practical matter, be enforced by the commission making the order.

For this reason, we believe it to be true that not a single regulatory commission, federal or state, has undertaken to conform its order respecting depreciation accounting to the rule laid down in *United R. & E. Co.* v. *West*.

The infirmities of that rule were pointed out in the dissenting opinion of Mr. Justice Brandeis. The almost universal practice in the business world, as pointed out in that opinion, is to base depreciation charges in accounting upon cost.

In determining the allowance to be made to operating expense in rate cases, it should be kept in mind that the rate proceeding is in no proper sense a determination of an amount to be paid to the owners for the taking of title to their property. It is, in fact, merely a determination, by public authority, of the amount which ought properly to be paid by the public for the services rendered by the enterprise, and covered by the rates to be fixed.

In determining that compensation, workable methods ought to be adopted which reasonably protect the owner and the public. If the practice is followed of charging the cost of property to operating expense in proportion to its consumption, year by year, in conformity with established business usage, the rights of both the public and the owner will be protected.

Under the *Smyth* v. *Ames* opinion (169 U. S. 466), among the matters to be considered and attributed proper weight by a regulatory agency is "the sum required to meet operating expenses." To enable such expenses to be estimated for consideration, it must be open to the rate-making agencies to compute the same upon some rational and practi-

cable basis. We maintain that if the rate-making agency, in the exercise of its judgment, adopts a method for determining the expense of annual depreciation which accords with the common practice of the business world, it is within the *Smyth* v. *Ames* rule, and that its determination can not properly be held arbitrary or otherwise unconstitutional by any reviewing Court.

**The Commission Properly Excluded Well Drilling Costs and Overhead Costs Connected Therewith Which When Paid Were Charged to Operating Exenses.**

The Commission properly excluded well drilling costs and overhead costs connected therewith which the company had charged to operating expenses when such costs were incurred. These costs were for well drilling operations in the early history of the company, prior to 1923. They aggregated approximately $17,000,000, when incurred. If included, and subjected to depreciation, they would now amount to around $4,000,000 (AR. Vol. IV, p. 184).

Under Accounting regulations now in effect, costs of this character are required to be charged to capital, but at the time these costs were incurred there was no such regulation. Hope then elected to charge them to operating expenses. They were so charged; and Hope was fully reimbursed by revenues received from rates. Such revenues were adequate to pay all operating expenses and a handsome return upon capital, as well. During the 25 years in which Hope followed the practice of charging such costs to operating expenses, it earned an average return, above operating costs, of approximately 15 per cent upon its outstanding stock and accumulated surplus. (R. Vol. I, p. 34; R. Vol. III, pp. 13-14.)

These cost items were charged by Hope to operating expenses in accordance with a determined policy, long continued. By following that policy Hope, a public utility, made its operating expenses appear larger, by the amount

of the items so charged, than they would have been had such items been charged to capital. The commission in its opinion properly said:

> "There must also be some finality to these decisions. If they are treated as expenses at one time and as plant investment subsequently, chaos in rate-making and in corporate finance will prevail."

To permit a public utility to swell its apparent operating cost by charging capital items to operating expenses, which it thereafter withdraws and adds to capital, operates as a fraud upon the public. It makes no difference whether the public utility is, at the time of following such practice, subjected to regulation or not. The public is entitled to a fair statement in the accounts of the utility, and in its financial reports, as to its operating costs.

This is true because, whether regulated by a rate-making agency or operating without such regulation, the right of the public utility to compensation for the services which it renders is limited to rates which are reasonable; and the level of reasonableness is determined upon consideration of operating expenses, among other factors. This is true whether the rate payer may appeal for protection against exorbitant charges to a regulatory commission, or must assert his rights in the courts.

Furthermore, the public, in determining whether to create a commission for the regulation of a public utility industry, may be governed by the extent of the profits above expenses which utilities in that industry are exacting from the public. Public policy accordingly requires that honesty and consistency shall be observed in public utility accounting.

Whatever may have been its purpose, Hope has exercised the freedom which has been allowed it, with respect to its manner of keeping its accounts, by charging to operating expenses not only these items which it now claims ought to have been charged to capital cost, aggregating $17,

000,000, but also by charging to operating expenses, as for depreciation, amounts aggregating more than $16,000,000 beyond the actual accrued depreciation, as found by the Commission. (R. Vol. I, p. 81). By these practices, the operating profits of Hope were made to appear $33,000,000 less than they would have appeared had the charges not been made to operating expenses.

Furthermore, Hope was not only a public utility, subject to public regulation whenever public regulation should be imposed by appropriate authority, but it was in fact subjected to public regulation in West Virginia, with respect to its sales within that State, under Chapter 9, West Va. Laws of 1913. Before the Public Service Commission of that State Hope actually used its operating expenses, including the costs for well drilling and accompanying overheads, which are the subject of this discussion, to support an application for increased rates. (Re *Hope Natural Gas Co.*, P. U. R. 121, E. 418, 440)

In other later proceedings, involving another company, claim was made before the West Virginia Commission, that similar costs, which had been similarly charged to operating expenses, should be included in the rate base. The Commission refused such inclusion, and was sustained by the Supreme Court of Appeals of the State, in *Natural Gas Co. v. Public Service Commission*, 95 W. Va. 557. At a yet later time, the same Natural Gas Company, in another rate proceeding, in which it was resisting a petition for a rate reduction, repeated its claim. In that case the Commission denied the reduction, upon consideration of a valuation made by it, which appears to have taken into account these items of claimed capital cost, which had been charged to operating expenses. Upon an appeal, the Supreme Court of Appeals of the State set the Commission's decision aside, upon that and other grounds, in an opinion in which it said:

> "In the instant case, as already indicated, the overheads and the items of physical property now sought to

be capitalized were charged to operating expenses, and the rates apparently fixed on that basis. For the company now, by virtue of a change in accounting, to attempt to capitalize such items, is certainly not just or proper, under our decisions." (*City of Wheeling* v. *Natural Gas Company*, 115 W. Va. 149)

**The Commission's Order, Viewed in Its Entirety, Produces No Arbitrary Result.**

No complaint is made that Hope was not afforded a fair hearing. The rate base finding, as we have shown, conforms to the requirements of decisions of this Court. The Commission proceeded in conformity with the statute under which it acted. Finally, the order, viewed in its entirety, produces no arbitrary result.

The rate base used exceeds the original cost less depreciation. The cost of unoperated gas acreage was reflected in the rate base. More than $16,000,000 which Hope had charged to operating expenses, was restored to capital, and included in the rate base. And upon that rate base the Commission allowed rates to yield the generous return of 6½ percent. (That this return was adjudged "low" by the Court of Appeals may perhaps indicate an unconscious disposition on the part of the court to view critically the Commission's order, rather than a disposition to approach consideration of it in the spirit which would seem to be dictated by the rule which we are now invoking.)

This return of 6½ percent may be contrasted with barely more than 5 percent, allowed to a utility by the Illinois Commission, in a rate order, which finally came before this Court. The order was sustained by the Illinois Supreme Court, and an appeal from the judgment of that court to this Court was held to present no substantial federal question. *Peoples Gas Light and Coke Co.* v. *Hart*, et al, 367 Ill. 435, 287 Ill. App. 377, 373 Ill. 31, 309 U. S. 634.

If the rate of return used in this case had been 5 percent, as in the *Peoples Gas Light and Coke Co. case*, instead of 6½ percent, that would have operated to decrease the fair

return allowed by $505,687.89. On the other hand, if $17,000,000 for well drilling and related costs, which Hope claims should have been included, had been included, and subjected to appropriate reduction for depreciation, the rate base would have been increased by approximately $4,000,000, as has been before shown. Upon that increase 5 percent would have yielded $200,000, or less than one-half of the amount by which the 6½ percent has increased Hope's earnings above that which it would have received under the return found adequate by the Court to meet constitutional requirements in the *Peoples Gas Light and Coke Company case*, just cited. Also if these items for well drilling and related costs had been included, and the full amount which Hope has charged to operating expenses, as depreciation, had been deducted, the rate base would have been $12,000,000 less than the rate base which the Commission found and used.

There are no costs incident to establishing Hope's business which have not already been recouped, through returns received in the past. Indeed, over its entire history, up to 1940, Hope's stock, issued for cash or other assets, has earned an average yield of 20.4 percent per annum (R. Vol. III, p. 15).

Of its entire issue of $35,000,000, all common stock, $15,969,300 was issued for cash or other assets. Up to January 1, 1941 it had paid out dividends in cash amounting to $97,273,640 (R. Vol. III, p. 15) and had accumulated a cash surplus as of that date, amounting to more than $8,000,000 (R. Vol. III, p. 17, Schedule 4).

Upon all of its stock outstanding in the past, including that issued in stock dividends, Hope has paid an average of 14 percent on common stock. The Commission's rate order was designed to produce a fair return of $2,191,314. This is 5 percent upon upwards of $43,800,000. It will enable payment of more than a 6 percent return upon the entire volume of Hope's stock outstanding, both that which was issued for cash or other assets, and that which was issued

in stock dividends; and it amounts to 12.9 percent upon all such stock which was issued for cash or other assets.

Such an order, issued upon such a record as was before the Commission, does not call for the intervention of a court of equity, to prevent confiscation. The demand for such intervention must arise from a feeling that long acquiescence by the public in the collection of an unduly high return creates a vested right to demand a continuance of that happy experience.

## CONCLUSION.

Upon matters not argued in this brief, which are involved in this case, we concur on the argument made by counsel for the Federal Power Commission, and the Pennsylvania Public Utility Commission, Petitioners, filed herein.

The judgment below should be reversed.

Respectfully submitted on behalf of the National Association of Railroad and Utilities Commissioners.

JOHN E. BENTON,
FREDERICK G. HAMLEY,

## APPLICATION FOR LEAVE TO FILE BRIEF *AMICUS CURIAE.*

---

Comes now Cities Service Gas Company, applicant, and informs the Court:

I.

That Cities Service Gas Company is a private corporation, organized and existing under the laws of the State of Delaware, and is authorized to do business in the states of

Oklahoma, Texas, Missouri, Kansas and Nebraska; and owns and operates a natural gas production and transmission pipeline system extending from numerous fields in the states of Texas, Oklahoma, Kansas and Missouri to approximately 265 cities, towns and communities in the above mentioned states, the greater part of its business being the "sale in interstate commerce of natural gas for resale," and, with respect to such sales for resale, is subject to the rate-regulatory jurisdiction of the Federal Power Commission under Sections 4 and 5 of the "Natural Gas Act."

II.

That on October 20, 1939, the Federal Power Commission in its Docket No. G-141 instituted an investigation of the rates, charges and practices of said Cities Service Gas Company, upon which order hearings were begun on November 30, 1942 and concluded February 2, 1943; and which resulted in an interim order issued by said Commission on July 28, 1943.

In said interim order the Commission in making its determination of rate base excluded all evidence of "fair value" of the plant and property of this applicant; that had the Commission found a rate base upon present "fair value" of the property, plant and enterprise of the company, such rate base would have been greatly in excess of the so-called "actual legitimate cost" rate base so actually determined and adopted by the Commission in the amount of $48,567,756; that by the use of said rate base, as found by it, the Commission ordered an annual reduction in the revenues of Petitioner of $4,445,871; that such reduction could not have been ordered had the present "fair value" been determined and adopted by the Commission; that by reason of the rejection of the principle of present "fair value" as the rate base of said Cities Service Gas Company, the Commission could not validly determine whether or not the rates and charges of said Company were reasonable or unreasonable, or whether or not any reduction should be made therein, and, if made, the proper and legal amount thereof; and that by reason of all of which the rights of this company have been denied and violated.

That one of the decisive issues in said case as between

the Federal Power Commission and said Cities Service Gas Company was and is the denial and exclusion by the Commission of the governing principle of "fair value" in the determination of the rate base of this applicant. Said interim order (Docket No. G-141) in that behalf declares:

"Exclusion of 'Fair Value' Evidence.

"At the threshold, we are met with the Company's contention that the trial examiner improperly excluded evidence of reproduction cost and *so-called* 'fair value' of the properties. Our views as to why such evidence should be excluded have been stated in earlier opinions (Citing: Detroit v. Panhandle Eastern Pipe Line Company et al., 45 P.U.R. (n.s.) 203, 208-210; Re Chicago District Electric Generating Company, 39 P.U.R. (n.s.) 263, 269-272), and need not be amplified here."

*(Comm. Op. No. 95, p. 6.)*

* * * * *

"(3) No necessity was shown for the consideration in this proceeding of the Company's evidence of * * * 'fair value' of its property."

* * * * *

"(6) The actual legitimate cost before depreciation, within the meaning of Section 6(a) of the Natural Gas Act of the Company's gas plant used and useful, as of December 31, 1941, is not more than $66,977,654."

**Note:** After deduction therefrom of so-called "depreciation and depletion" as found by the Commission in the amount of $21,804,449, and the addition thereto of "construction work in progress" in the amount of $1,576,357, and "working capital" in the amount of $1,818,194, the resulting figure of $48,567,756 is designated and adopted by the Commission as the "rate base."

*(Comm. Order, Docket No. G-141, July 28, 1943, pp. 1, 2, 3.)*

III.

That, being dissatisfied with said interim order, said Cities Service Gas Company, in the manner provided by law, is reviewing said order of the Commission by appropriate proceedings now pending in the United States Circuit Court of Appeals for the Tenth Circuit, that being the Court having jurisdiction to review said order under the "Natural Gas

Act," which case is entitled and numbered as follows: "*No. 2813, Cities Service Gas Company, a Corporation, Petitioner, vs. Federal Power Commission, Public Service Commission of the State of Missouri, and the City of Kansas City, Missouri, Respondents.*"

IV.

That the exclusion of the principle and elements of present "fair value" is one of the decisive issues in the cause of *Federal Power Commission v. Hope Natural Gas Company*, (No. 34) in which this application is filed; for that in its said opinion and order now under review in this said cause, the Commission rejected and discarded the principle of "fair value" and adopted so-called "actual legitimate cost" as the rate base of Hope Natural Gas Company. The order of the Commission in that behalf finds and declares:

> "With the decline in favor of the doctrine of 'fair value' as the only mode of public utility rate regulation, its keystone, reproduction cost, crumbles. Bona fide investment figures now become all important in the regulation of rates."
>
> • • • • •
>
> "(18). For the purpose of determining just and reasonable rates for the future, the rate base represented by the actual legitimate cost of the Company's property used and useful in the production, transportation and sale of natural gas in interstate commerce (Finding (13)), plus inoperated acreage, working capital, and future net capital additions is $33,712,526."
>
> *(Comm. Opinion 76 and Order, Docket Nos. 100, 101, 127, 113, May 26, 1942, p. 4.)*

That said issue of "fair value" will be considered and determined by this Court in this said cause No. 34, as this applicant verily believes; and this applicant, in the protection of its own rights and in its own behalf, desires by brief *amicus curiae* to present said issue of present "fair value" to this Court, believing that the decision of this Court in this case will be conclusive of the same issue in applicant's case now pending as aforesaid, before the United States Circuit Court of Appeals for the Tenth Circuit.

V.

That the Solicitor General of the United States and Respondent, Hope Natural Gas Company, have consented to

the filing of brief by this applicant as *amicus curiae*, as herein prayed.

That Petitioner, Federal Power Commission, although requested so to do, has refused to accord its consent to the filing of such brief, *amicus curiae*. The consent of the City of Cleveland in Case No. 35 has not been obtained.

Wherefore, applicant, Cities Service Gas Company, respectfully prays that it be allowed to file its brief as *amicus curiae* upon the issue of present "fair value" as the controlling principle of "rate base" under the Natural Gas Act and the law of the land.

CITIES SERVICE GAS COMPANY,
By DONALD C. MCCREERY,
1217 First National Bank Bldg., Denver, Colorado.

A. M. EBRIGHT,
Bartlesville, Oklahoma.

ROBERT D. GARVER,

## BRIEF AND ARGUMENT OF CITIES SERVICE GAS COMPANY, *AMICUS CURIAE*.

---

### The Principle of "Fair Value."

The concept of "value" is inherent in rate-regulatory control. Upon the exercise by government of the right to require that the rates of public utilities be "reasonable," it was found that the fundamental and necessary measure or test of such reasonableness was the amount or value of the property so devoted to the public service, for the use of which the utility is entitled to compensatory return.

In the application of the developing principles of rate regulation, the "value" of the utility property became the accepted and basic test of reasonableness of rates. *(Stone, et al. v. Farmers Loan and Trust Co.* (1886), 116 U. S. 307, 6 Sup. Ct. 334, 335, 345; *Dow, et al. v. Beidelman* (1888), 125 U. S. 680, 8 Sup. Ct. 1028, 1029, 1030, 1031.) Ten years later, in 1898, this Court in *Smyth, et al. v. Ames, et al.*, 169 U. S. 466, 18 Sup. Ct. 418, accepted the foundation of "fair value" theretofore established and applied as the rate base, and concerned itself with the appropriate and permissible evidence and procedure "to ascertain that value."

"It is the settled rule of this Court that the rate base is present value."

*United Railways v. West* (1930), 280 U. S. 234, 50 Sup. Ct. 123, 126;

*Los Angeles Gas & Electric Corp. v. Railroad Commission, et al.* (1933), 289 U. S. 287, 53 Sup. Ct. 637;

*Denver Union Stock Yard Co. v. United States et al.* (1938), 304 U. S. 470, 58 Sup. Ct. 990;

*Federal Power Commission v. The Natural Gas Pipeline Company* (1942), 315 U. S. 575, 590, 62 Sup. Ct. 736.

The principle of "fair value" in rate regulation is not the result of any one case; it is the course of decision and established fundamental law for more than half a century, declared and re-declared through the years by this Court and other Federal Courts.

Unless "fair value" as the rate base of a utility has been *constitutionally* and *authoritatively* discarded, it continues to be "the law of the land."

In this brief our discussion will be confined to the one point (not including the constitutional question), whether or not the principle of "fair value" as the rate base of a utility has been discarded and repudiated by law, that is, by the Federal Power Act, the Natural Gas Act, or otherwise.

**Rejection by Federal Power Commission of Principle of "Fair Value."**

The Federal Power Commission, in a series of decisions beginning with "*In the Matter of Chicago District Electric Generating Corporation*" *(July 16, 1941)*, 39 P.U.R. (n.s.) 263, and culminating with its latest decision "*In the Matter of Cities Service Gas Company*" (Commission Docket No. G-141, *July 28, 1943)* (not yet officially reported), under authority asserted to have been delegated to it by Congress in *Section 208* of the Federal Power Act, and in *Section 6* of the Natural Gas Act, has condemned the principle of "fair value" and substituted therefor that which is variously described by it as "actual legitimate cost," "prudent investment," and "net investment" rate base.

Whatever doubt there might be as to the definite purpose of the Commission and the precise meaning of the language employed by it *in the earliest of its decisions* above referred to, is now completely dissipated in its latest decision. We quote briefly from the several decisions in question:

In the *Chicago District Electric Generating Corporation* case *supra*, the Commission declared:

"* * * There is no difficulty whatever in ascertaining promptly and accurately from the books of the respondent the cost of, or the prudent investment in, its property.

"The answer to the problem of whether we have been authorized by Congress to disregard reproduction cost evidence in fixing the rate base is to be found in §208(a) of the Federal Power Act, 16 USCA §824g. That section provides:

" 'Section 208. (a) The Commission may investigate and ascertain the actual legitimate cost of the property of every public utility, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation, and the fair value of such property.'

"We are thus authorized, in the first instance, to investigate and ascertain the actual legitimate cost of the property of every public utility. We are likewise authorized to ascertain the depreciation therein. *It is when*

*we find it necessary for rate-making purposes in specific cases* that we may determine other facts bearing on the 'fair value' of such property.

* * * * *

"Congress clearly evinced a definite departure from the fair value doctrine of Smyth v. Ames. * * * *Congress recognized the fair value doctrine as an impediment to rate making.* * * *

* * * * *

"The facts in this proceeding are particularly appropriate for the determination of a rate base strictly on a prudent investment basis. *This is a situation peculiarly suitable for the application of the statutory power granted us* 'to escape the fog into which speculations based on Smyth v. Ames (1898), 169 U. S. 466, 42 L. Ed. 819, 18 S. Ct. 418, have enveloped the practical task of administering systems of utility regulation.'

* * * * *

"* * * We conclude, therefore, that the rate base in this case is the actual legitimate cost * * *." (Emphasis ours.)

*Re Chicago District Electric Generating Corp.*, 39 P.U.R. (n.s.) (1941), 263 at pp. 269, 270, 272.

In the *Panhandle Eastern Pipe Line Co.* case, the Commission said:

"Having been authorized by the Congress to determine in the first instance the actual legitimate cost of utility properties and the depreciation therein, we conclude that the rate base is the actual legitimate cost of the property used and useful in furnishing the service, * * *. It is certain from the record that no necessity exists requiring the consideration of other facts in determining a rate base in these proceedings. * * *"

*Detroit v. Panhandle Eastern Pipe Line Co.*, 45 P.U.R. (n.s.) (1942), 203, at p. 210.

In the *Hope Natural Gas Company* case, the Commission stated:

"*With the decline in favor of the doctrine of 'fair value'* as the only mode of public utility rate regulation, its keystone, reproduction cost, crumbles. Bona fide investment figures now become all important in the regulation of rates. * * *

* * * * *

"Accordingly, we begin with the book cost in the determination of the actual legitimate cost or investment in the facilities used in the company's interstate business. • • •

• • • • •

"After considering the evidence based upon the vouchers, books, and records of the company, and as a result of the application of fundamental principles of accounting, cost determination and equity, the Commission finds, in the words of §6(a) of the act, 16 U.S.C.A. §799(a) the actual legitimate cost. • • •

• • • • •

"This actual legitimate cost is predicated upon facts and it is the best evidence in these proceedings, so we will employ it for determining the proper and allowable rate base." (Emphasis ours.)

*Cleveland and Akron v. Hope Natural Gas Company*, 44 P.U.R. (n.s.) (1942), 1 at pp. 14, 15, 16.

In the *Cities Service Gas Company* case, *supra*, the Commission makes findings and orders *inter alia*, as follows:

"*Exclusion of 'Fair Value' Evidence.*

"*At the threshold, we are met with the Company's contention that the trial examiner improperly excluded evidence of* reproduction cost and *so-called 'fair value' of the properties.* Our views as to why such evidence should be excluded have been stated in earlier opinions (Citing: Detroit v. Panhandle Eastern Pipe Line Company et al., 45 P.U.R. (n.s) 203, 208-210; Re Chicago District Electric Generating Company, 39 P.U.R. (n.s.) 263, 269-272), and need not be amplified here."

*(Comm. Op. No. 95, p. 6.)*

• • • • •

"(3) No necessity was shown for the consideration in this proceeding of the Company's evidence of • • • 'fair value' of its property."

• • • • •

"(6) The actual legitimate cost before depreciation, within the meaning of Section 6(a) of the Natural Gas Act of the Company's gas plant used and useful as of December 31, 1941, is not more than $66,977,654."

**Note:** After deduction therefrom of so-called "deprecia-

tion and depletion" as found by the commission in the amount of $21,804,449, and the addition thereto of "construction work in progress" in the amount of $1,576,357, and "working capital" in the amount of $1,818,194, the resulting figure of $48,567,756 is designated and adopted by the Commission as the "rate base." (Emphasis ours.)

*(Comm. Order, Docket No. G-141, July 28, 1943, pp. 1, 2, 3.)*

It thus is made entirely clear from the quoted portions of the Commission opinion and order in the *Cities Service Gas Company* case, *supra*, that in excluding all evidence of "fair value," the principle of "fair value" was discarded and repudiated in its entirety. It is also now equally clear, from the citation in *The Cities Service Gas Company* opinion, of its earlier decisions above referred to, that the Commission intended from the outset to overrule completely the principle of "fair value" as well as the formula of "reproduction cost". The authority asserted thus to revolutionize the law of "rate base," the Commission, at sundry times, has sought to justify and legalize.

The numerous and inconsistent positions of the Commission (1935-1940, 1940, 1941-1943), with respect to the principle of "fair value," and the significant chronology thereof, are set forth in *Appendix D* hereto. This is done, not because that body possesses any legislative or judicial functions, for it is elementary that it does not have any such powers. The Commission, a mere administrative agency of government, is a creature of statute, with limited powers measured by "the ambit of the statutory authority," which Congress could and did delegate to it. *The very fact of the variant Commission contentions, however, does reflect the determination of the Commission, by direction and indirection, to re-make the established law of rate base.*

**Such Commission Rejection of "Fair Value" is Unauthorized by and Contrary to Provisions of the Natural Gas Act.**

The contention *presently relied upon by the Commission* is that, by *Section 6* of the Natural Gas Act (and similarly by *Section 208* of the Federal Power Act), established or authorized so-called "actual legitimate cost" as the rate base of utilities. To this contention we address ourselves.

*Section 6* of the Natural Gas Act is as follows:

"*Ascertainment of Cost of Property*".

"Section 6. (a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.

"(b) Every natural-gas company upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction."

The Commission utilizes its own theories of rate base by construing the language of the section to mean that "fair value" is "gone with the wind" except "in specific cases" when original or historical cost is not available from the books of the utility. However, the normal and straightforward meaning of the language of the section, which as we will point out is the Congressional construction thereof, is that thereby the Commission is given a two-fold authority: (1) in connection with and to facilitate in the public interest its broad supervisory control under the Act over all "natural gas companies," whether or not subject to the Commission's rate-regulatory control, to ascertain certain facts with respect to every such "natural gas coinpany" (See *Amer. Tel. & Tel. Co. v. United States*, 299 U. S. 232, 237-242, 57 Sup. Ct. 170, 172-174); and (2) additionally, "for rate making purposes," (not merely and only "in specific cases") all facts "necessary" to be ascertained in such cases.

Under the Commission construction of *Section 6 (a)*, it never could be "found necessary" to "ascertain fair value," because "cost" obviously is as capable of estimate as is "fair value." In a cost appraisal where actual cost figures are not available, an estimate of cost properly may be made (*Amer. Tel. & Tel. Co. v. United States* (1936), 299 U. S. 232, 244, 57 Sup. Ct. 170). The effect of their argument is *totally* to eliminate "fair value." The argument thus refutes itself.

The Commission construction also carries with it the implied imputation (aside from the constitutional questions posed) that Congress manifested a legislative intent, **through indirection,** to outlaw "fair value" and clothe the Commission with authority to impose its so-called "actual legitimate cost" rate base.

We believe there is neither doubt nor ambiguity nor indirection in the congressional enactment. It is our conviction that an examination of what Congress was asked to do by the Power Commission, of what Congress in fact did, and of what Congress formally declared it was doing, conclusively, completely and finally disposes of the Commission contention that "fair value" was cast aside and so-called "actual legitimate cost" substituted therefor by *Section 208* of the Federal Power Act and by *Section 6* of the Natural Gas Act.

Accordingly, we direct consideration to that portion of the legislative history of the statutory language in question, which shows the following:

1. The draft of the section as prepared by and presented to the Congress by the Federal Power Commission *(Appendix A hereto,* pp. iii-iv).

2. The presentation to Congress, on behalf of the Commission, by *Commissioner Seavey* and *Commission Solicitor DeVane,* of the Commission proposal that "fair value" as the rate base be discarded and written out of the law of the land, and that so-called "actual legitimate prudent cost" be substituted by Congress therefor *(Appendix A hereto,* pp. v-xxi).

3. The direct, pointed and striking refusal of Congress so to adopt the proposal of the Power Commission, visually demonstrated by a *composite* of the section, *as proposed* by the Power Commission and *as enacted* by the Congress *(Appendix B hereto,* p. xxii).

4. The Joint Report of Senate and House Committees on Interstate Commerce re Natural Gas Act, showing that there was no slightest Congressional intention to depart from or discard "fair value" as the rate base of utilities *(Appendix C hereto,* pp. xxiv, xxv, xxvi-xxvii, xxix).

Numerous significant facts emerge from a consideration of the foregoing steps in the legislative action.

*Section 208* of the Federal Power Act, entitled "Ascertainment of Cost of Property," of which *Section 6* of the Natural Gas Act is an exact counterpart, except for the necessary substitution of the term "natural gas company" for the term "public utility," was drafted not by Congress but by the Federal Power Commission *(Appendix A hereto,* page ii). As so drafted (page iv) and urged before the Congress by Commission spokesmen (pages x-xvi, xvii-xxi), "actual legitimate prudent cost" was authorized as the rate base. *This proposal was rejected by Congress (Appendix B hereto,* p. xxii). The antithesis between the Commission proposal and the Congressional enactment is thereby made evident.

In the *Commission draft of Section 208* (originally numbered *211)* of the Federal Power Act, as prepared and presented to Congress by the Power Commission, there was included a third paragraph as follows:

> "(c) In determining just and reasonable rates, the Commission shall fix such rate as will allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question."

By this subsection "actual legitimate prudent cost" was specifically made the rate base. It will be noted also that subsections (a) and (b) of the Section as drafted and proposed by the Commission, which were specifically "built up" to and coordinated into subsection (c), made the provisions of the section as a whole, including the "actual legitimate prudent cost" rate base in subsection (c), applicable to the entire Power Act. These subsections also provide that the ascertainment of cost shall be limited to "actual legitimate prudent cost" as the rate base and for all purposes of the Act. As drafted, the entire section is an express determination, declaration and fixation of a new statutory rate base, fundamentally inconsistent with the principle of "fair value." That was the very purpose and object of the Commission draft, as both Commissioner Seavey and Solicitor DeVane declared in insisting upon its enactment by Congress, *(Appendix A*, pp. v, x, xii, xvii-xviii, xx). The legislative policy thus proposed, posed directly the issue of the so-called "prudent cost rate base" as against the "fair value" rate base, under long established law *(Appendix A*

*hereto*, p. xix). In this connection we quote from the presentation of both Commissioner Seavey and Solicitor DeVane:

"I think probably I should refer to section 211 in its entirety, but particularly I want to address a few remarks to 211 (c).

"Section 211 authorizes the Commission to ascertain the actual prudent cost of the property of every public utility under its jurisdiction and to require the utilities to file inventories of their property and its cost. It directs the Commission to keep itself informed of the cost of all additions and betterments to utility property. And it provides that in determining just and reasonable rates, the Commission shall fix rates which will allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question. Rate regulation must eventually be based on prudent investment. Recent decisions of the Supreme Court and the respect which the Court has always paid to the constitutional interpretations of the coordinate branches of the government afford grounds for hope that this highly desirable result will be accomplished if the Congress should now definitely adopt the prudent cost rate base. This would present the case to the Court in a new light with a declaration of national policy that it has never had before."

(*Appendix A*, pp. v, xviii.)

However, subsection (c) was stricken in its entirety by Congress. Moreover, there was also stricken by Congress the provisions of subsections (a) and (b) which constituted a "build-up" to and coordination of these subsections into the rate base structure set up in subsection (c). Subsections (a) and (b) were merged by Congress, and in the merged section there remained but one concept described by Solicitor DeVane as follows:

"• • • I directed your attention to 211 (a) this morning as being complementary to State regulation. Section 211 (a) will secure a body of information, which I think is most valuable in the administration of this act and as an aid to the State commissions in their regulation of consumers."

(*Appendix A*, p. xviii.)

And yet the Commission contends in its decisions, *supra*,

that the section *as passed by Congress*, containing no provision of any kind as to rate base, means identically the same thing as if the section as proposed by the Commission and as stricken by Congress had remained in the Act.

**Composite** of *Section 208* of the Federal Power Act, as proposed by the Power Commission and as enacted by Congress, will be found in Appendix B hereto (p. xxii).

Such composite is a visual demonstration of the important and decisive fact that the language of the *Commission draft* and the language of the *Congressional enactment* not only do not mean or state the same thing but also are divergent and inconsistent in intent, meaning and statement. *Congress after deliberate consideration has spoken specifically and authoritatively and its declaration of legislative policy and enacted law can not be ignored or explained away or repudiated.*

The Commission contention is directly contrary to that which the Joint Committee's Report *(Appendix C hereto,* page xxix) declared to be and obviously is the meaning of *Section 6(a)* of the Gas Act (and *Section 208* of the Power Act) as enacted. We quote from that Report:

> "Subsection (a) authorizes the Commission to investigate and ascertain the actual legitimate cost of property, depreciation and other necessary facts for rate making purposes."

The Committees evidently considered it desirable also to reflect the views on the legislation entertained by the "National Association of Railroad and Utilities Commissioners" and so incorporated in their Joint Report as in harmony with the views of the Committees, a resolution adopted by the Executive Committee of that Association, wherein, among other things, it is said:

> "The bill provides for regulation along recognized and more or less standardized lines. *There is nothing novel in its provisions, and it is believed that no constitutional question is presented.*" (Emphasis ours.)
>
> *(Appendix C hereto,* pages xxvi-xxvii.)

Clearly then Congress evinced no intent to authorize or establish the statutory rate base proposed by the Commis-

sion and thus discard "fair value". *Section 6*, as we have seen from the testimony of *Solicitor DeVane*, becomes a mere authorization to "investigate and ascertain" certain facts referred to by Congress.

> "There is, of course, no more persuasive evidence of the purpose of a statute than the words by which the legislature undertook to give expression to its wishes." *United States v. American Trucking Assns.* (1940), 310 U. S. 534, 543; 60 Sup. Ct. 1059, 1063.

Such is the record. Yet this Court is "asked to brush all this aside and simply to decree * * * anyway" that Congress, by *Section 6* of the Natural Gas Act and by *Section 208* of the Federal Power Act, intended to and did repudiate the principle of "fair value" as the rate base of electric utilities and natural gas companies. The issue is squarely presented whether or not Congress intended in *Section 6* to challenge, override or repudiate the principle of "fair value." If it did, that intention must affirmatively appear from the legislation itself or the authoritative meaning attributed to it by the Congressional Committees which managed the bill. The legislative record shows what was *proposed* by the Power Commission and why, also what was *in fact* enacted, and finally what the managing committees of Senate and House declared before its enactment to be the purpose and meaning of the statutory language. Congress flatly refused to do that which the Power Commission proposed. There is not one word from committees or members of Congress to the contrary.

As shown in *Appendix D* hereto, it was about five years (July 16, 1941) after the enactment of the Federal Power Act (August 26, 1935) that the Power Commission **for the first time,** declared that *Section 208* of the Power Act authorized it by fiat to discard the principle of "fair value." This is the meaning now attributed by the Commission to the language of its opinion *In the Matter of Chicago District Generating Corporation, supra,* (July 16, 1941), in the Commission opinion *In the Matter of Cities Service Gas Company, supra,* (July 28, 1941). No utility company, however cautious, during the elapsed interval of eight years since the passage of the Federal Power Act in 1935, could have

learned that the principle of "fair value" had been abrogated, for there is and has been no source of law from which it could ascertain that fact.

It is incredible, had Congress passed or intended to pass a law challenging or abrogating the well known and fully established course of "constitutional decision of this Court" as to "fair value," that it or its committees did not make "at least one clear statement of that purpose." On the other hand, the comparison of the legislation *as proposed* and *as enacted* discloses an express and specific legislative policy, determination and adjudication after extensive hearings, not to cast aside the principle of "fair value."

Nor can the Power Commission "sustain its position by a literal reading" or interpretative construction of the language of *Section 6(a) as enacted,* for therein is to be found not one word or phrase suggesting or remotely implying the repudiation of the principle of "fair value."

The Commission contention is a distortion, not a construction, of the section. The legislative history of the statute squarely conflicts with the Commission position.

We quote somewhat at length from the recent opinion of this Court announced by *Mr. Justice Jackson* in *Helvering v. Griffiths,* wherein the facts, circumstances, applicable reasoning and controlling rules of law are strikingly analogous to the situation here presented and accordingly are applicable in this discussion.

> "The question in this case is whether the Acts of Congress and the administrative regulations thereunder afford a basis on which we may reconsider the decision in Eisner v. Macomber, 252 U. S. 189, 40 S. Ct. 189, 64 L. Ed. 521, 9 A.L.R. 1570, and pass on the Government's request that it be overruled.
>
> * * * * *
>
> "The tax is asserted under the general provisions of §22(a) of the Internal Revenue Code, 26 U.S.C.A. Int. Rev. Code §22(a), that income includes 'dividends,' together with the specific provision of §115 (f) (1), 26 U.S.C.A. Int. Rev. Code §115 (f) (1), that: 'A distribution made by a corporation to its shareholders in its stock or in rights to acquire its stock shall not be treated

as a dividend to the extent that it does not constitute income to the shareholder within the meaning of the Sixteenth Amendment to the Constitution.'

"Was Congress thereby saying that such a dividend as we have here is not being taxed, in view of the Eisner v. Macomber decision, or was it saying that regardless of that decision it is being taxed? * * *

* * * * * *

"On March 3, 1936, the President had suggested the enactment of a tax upon the undistributed income of corporations. On March 26, 1936, and while the taxpayer's petition for certiorari in the Koshland case was pending, a Subcommittee of the House Ways and Means Committee recommended that such a tax be enacted in lieu of the existing capital-stock, excess-profits, and income taxes on corporations. It was thought by some authorities that imposition directly upon shareholders of a tax based on their pro rata shares of corporate earnings would be more satisfactory than the undistributed profits tax. Serious consideration of this method, which had been employed in earlier times, was foreclosed by the belief that Eisner v. Macomber made it 'impossible' to put into effect.

"The statements of members of Congress and of responsible Treasury officials at the hearings and debates on the Act *are at variance with the present assertion of the Government that Congress intended §115 (f) (1) to challenge or override the decision* to which it had in other sections of the Act accommodated itself.

* * * * * *

"In this state of affairs the Treasury issued Regulations which plainly construed §115 (f) (1) not as repudiating Eisner v. Macomber by taxing stock dividends but as exempting them and adopting the existing decisions, including Eisner v. Macomber.

* * * * * *

*"We think if Congress had passed or intended to pass an Act challenging a well known constitutional decision of this Court there would at least one clear statement of that purpose appear either from its proponents or its adversaries. Not one contemporaneous word in or out of Congress discloses the purpose which the Government says we should find that this legislation accomplished.*

"Against this background, it was proposed to incorporate an undistributed profits tax in the pending Revenue Act for 1938. As proposed and enacted, §115 (f) (1) was the same as in the 1936 Act. Like earlier Acts, the Revenue Act of 1938, as proposed and enacted, contained provisions intended to conform with the authority of Eisner v. Macomber, and it was attacked as embodying the principle of forcing the distribution of needed corporate assets. * * *

* * * * *

"* * * Despite these factors, *again there was not the slightest suggestion of the view that §115 (f) (1) had made or had intended to make all stock dividends taxable;* on the contrary there was continued recognition of the authority of Eisner v. Macomber. * * *

* * * * *

"*The Government says that the time has come when Eisner v. Macomber must be overruled,* and that we should construe §115 (f) (1) as intended to tax the dividends here in question and thus to require reconsideration of that decision. *It should be observed that the question of the constitutional validity of Eisner v. Macomber is plainly one of the first magnitude; but this is not to say that it is presented in this case. Under our judicial tradition we do not decide whether a tax may constitutionally be laid until we find that Congress has laid it. Unless the tax asserted by the Commissioner has been authorized by Congress it fails of validity before we even reach the constitutional question. To reach that question we must decide whether Congress intended by §115 (f) (1) to do what Eisner v. Macomber squarely held that it could not. We cannot find that it did.*

"The Government cannot sustain its position on a literal reading of §115 (f) (1). * * *

* * * * *

"*The administrative and legislative history of the statute squarely conflict with the Government's position in this case.*

* * * * *

"*We are asked to make a retroactive holding that for some seven years past a multitude of transactions have been taxable although there was no source of law from which the most cautious taxpayer could have learned of the liability.* If he consulted the decisions of this Court,

he learned that no such tax could be imposed; if he read the Delphic language of the Act in connection with existing decisions, it, too, assured him there was no intent to tax; if he followed the Congressional proceedings and debates, his understanding of nontaxability would be confirmed; if he asked the tax collector himself, he was bound by the Regulations of the Treasury to advise that no such liability existed. It would be a pity if taxpayers could not rely on this concurrent assurance from all three branches of the Government. *But we are asked to brush all this aside and simply to decree that these transactions are taxable anyway.*

* * * * *

"*We are unable to find that Congress intended* to tax the dividends in question, *and without Congressional authority we are powerless to do so.* That being the case, we cannot reach the reconsideration of Eisner v. Macomber on the basis of the present legislation and regulations."

*Helvering v. Griffiths* (March 1, 1943) ..... U. S. ....., 63 Sup. Ct. 636, 637, 639-640, 645, 645-646, 647, 648, 652-653, 653.

This Court speaking through *Mr. Justice Black* recently also has declared:

"Whether or not one agrees with the committees that the cited cases constituted an unduly restricted interpretation of the Clayton Act, one must agree that the committees and the Congress made abundantly clear their intention that what they regarded as the misinterpretation of the Clayton Act should not be repeated in the construction of the Norris-LaGuardia Act. *For us to hold, in the face of this legislation,* that the federal courts have jurisdiction to grant injunctions in cases growing out of labor disputes, merely because alleged violations of the Sherman Act are involved, *would run counter to the plain mandate of the act and would reverse the declared purpose of Congress.*"

*Milk Wagon Drivers' Union, etc. v. Lake Valley Farm Products, Inc., et al.*, 311 U. S. 91, 103, 61 Sup. Ct. 122, 128.

## Conclusion.

If as we believe conclusively appears from the record, there is no basis whatever "to find that Congress intended to challenge or override" the principle of "fair value," then this Court, as declared by it, *supra*, being "without Congressional authority" is "powerless to do so," for Congress by "the plain mandate of the act" has abundantly made clear its legislative policy and purpose in that respect.

# APPENDIX A.

## Excerpts From Part I.

"HEARINGS BEFORE THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, HOUSE OF REPRESENTATIVES, SEVENTY-FOURTH CONGRESS,

FIRST SESSION,
ON
H. R. 5423

TO PROVIDE FOR CONTROL IN THE PUBLIC INTEREST OF PUBLIC UTILITY HOLDING COMPANIES USING THE MAILS AND THE FACILITIES OF INTERSTATE COMMERCE, TO REGULATE THE TRANSMISSION AND SALE OF ELECTRIC ENERGY AND NATURAL GAS IN INTERSTATE AND FOREIGN COMMERCE, AND FOR OTHER PURPOSES."

(February-March, 1935)

Testimony of *Commissioner Clyde L. Seavey* of the Federal Power Commission:

"Title II of H.R. 5423, introduced by Congressman Rayburn, is entitled 'Amendments to Federal Water Power Act.' By these amendments the present act is divided into three titles. It is provided that the present Federal Water Power Act shall constitute title I of the amended Federal Power Act. The Rayburn bill does not contain all of the sections of the present act. It includes (pp. 77 to 102) only those sections which it proposes to amend. None of these amendments to the present sections of the act is of major significance; they are made largely for the purpose of clarifying its effect in situations which have arisen in the course of its administration. A separate memorandum explaining these amendments is submitted herewith. The present analysis is devoted to the new titles which are added by the bill (pp. 103 to 141). Of these new provisions title II (pp. 103-122) contains the substantive provisions for the regulation of interstate electric utilities, and title III (pp. 122 to 141) brings together the provisions applicable to both water power licensees under title I and interstate operating companies under title II, including the general administrative and procedural sections."

*(Page 384)*

• • • • •

"Mr. Wolverton: Did you participate in the drawing of this bill?

"Commissioner Seavey: Yes; I worked on it along with many others.

"Mr. Wolverton: Who were the others?

"Commissioner Seavey: They were the legal department, our legal department, and members of the Commission, and our engineers were consulted about certain practical phases; our accountant was consulted, and generally, so far as the Commission is concerned, we took in the whole staff of the Commission.

"Now, in addition to that, together we consulted the chairman of this committee, Mr. Rayburn; discussed the policies and the provisions of the bill, and also consulted the legislative counsel and Dr. Splawn. I do not know whether I can remember anybody else or not."

*(Page 400)*

Testimony of *Dozier DeVane,* Solicitor, Federal Power Commission:

"Mr. Wolverton: Who actually sat down and drafted that language? Do you know? You know in the drawing of any bill it finally comes down to one individual or two individuals, who actually express the policies and ideas by the use of words. Who did that as to article II?

* * * * *

"Mr. DeVane: Commissioner Seavey and myself, of the Federal Power Commission, were the two persons to whom the Commission delegated the responsibility for this work. I would like to say, however, that to neither of us belongs the credit, if we may call it credit, for the language that is in the bill, because we have had a great deal of assistance from members of the Commission and from members of its staff. This title has been worked over very seriously and very earnestly."

*(Pages 552-553)*

## DRAFT OF FEDERAL POWER ACT AS INTRODUCED IN CONGRESS.

TITLE II. "AMENDMENTS TO FEDERAL WATER POWER ACT" (Amendments as proposed by Power Commission, indicated by italics).

"Section 201. Section 3 of the Federal Water Power Act is amended to read as follows:

* * * * *

"(13) 'net investment' in a project means the actual legitimate *prudent* original cost thereof * * *"

"Sec. 4. The Commission is hereby authorized and empowered—

* * * * *

"(b) To determine the actual legitimate *prudent* original cost of and the net investment in a licensed project, * * *"

*(Pages 24-25, 452)*

*Note:* The foregoing amendments were rejected by Congress

**Comment:** It is important to note that when Congress did intend to authorize the utilization of a rate base other than the rate base of "fair value," it did so in language directly, expressly and unmistakably declaring such policy. Thus in the *Federal Water Power Act of 1920 (41 Stat. 1063, 16 U.S.C. 791-823)*, "the valuation" of the property of any licensee "for purposes of rate making" *(Section 20)*, as well as for acquisition thereof by the Government *(Section 14)* is expressly limited to the "net investment" which is not "to exceed the fair value of the property taken" *(Section 14)*, as defined and limited to "actual legitimate original cost" *(Section 3 (13))*. Every license issued under the Act is "conditioned upon the acceptance by the licensee" of such rate base and valuation *(Section 6)*.

This is the only instance in which Congress has supplanted the principle of "fair value." It raised no constitutional obstacle, for if any person desired to avail himself of the license *privileges* of the *Water Power Act*, he *voluntarily* accepts at the outset the "terms and conditions" under which the United States is willing to permit the exercise of such privileges *(Alabama Power Co. v. Federal Power*

*Comm.*, 128 F. (2d) 280, 287). This is both logical and just under the very special circumstances involved in the development of hydro-electric "projects" on the "public lands," "reservations" and "navigable waters" *(Section 3 (1), (2), (8))*, over all of which the United States exercises the prerogative of proprietorship as well as that of sovereignty *(Light v. United States*, 220 U. S. 523, 31 Sup. Ct. 485).

PART II. "REGULATIONS OF INTERSTATE ELECTRIC COMPANIES ENGAGED IN INTERSTATE COMMERCE."

*Commission Draft of Bill:*

"Ascertainment of Cost of Property.

"Sec. 211. (a) The Commission shall have power to ascertain for the purposes of this title and title III the actual legitimate prudent cost of the property of every public utility, and every fact which in its judgment may or does have any bearing on the determination of such cost.

"(b) The Commission may require any public utility to file with it an inventory of all or any part of the property of the utility and of the original cost thereof, including only those elements of cost that may be considered for purposes of determining just and reasonable rates under the provisions of this title and title III and the rules and regulations of the Commission. The Commission shall keep itself informed regarding the cost of all additions, betterments, extensions, and new construction of the property of every public utility.

"(c) In determining just and reasonable rates, the Commission shall fix such rate as will allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question.

*(Page 35)*

Testimony of *Commissioner Seavey:*

"Section 211 authorizes the Commission to ascertain the actual prudent cost of the property of every public utility under its jurisdiction and to require the utilities to file inventories of their property and its cost. It directs the Commission to keep itself informed of the cost of all additions and betterments to utility property. And it provides that in determining just and reasonable rates, the Commission shall fix rates which will allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question. Rate regulation must eventually be based on prudent investment. Recent decisions of the Supreme Court and the respect which the Court has always paid to the constitutional interpretations of the coordinate branches of the Government afford grounds for hope that this highly desirable result will be accomplished if the Congress should now definitely adopt the prudent cost rate base. This would present the case to the Court in a new light with a declaration of national policy that it has never had before."

"Section 301 authorizes the Commission to prescribe the forms of all accounts and records to be kept by licensees and public utilities and to inspect and examine the accounts and records so kept. This section is in substance the same as the provisions of the Interstate Commerce Act applicable for many years to telegraph and telephone companies and reenacted in the Communications Act passed by the last Congress. Such accounting control is essential to the compilation of a uniform body of information about the industry needed for the efficient administration of the act."

"Section 202 of the bill amends section 4 of the Water Power Act. This section consists of a general enumeration of the commission's powers. The present subsection (a) contains a reference to the commission's determination of the net investment of the licensee in a project, but the power to make such determination is left to implication and not expressly granted. While its power to do so has been upheld in a suit brought by the Clarion River Power Co. (59 Fed. (2d) 861, certiorari denied 287 U. S. 639), this amendment is designed to remove continued controversy on the subject. Subsection (a) is divided into two subsections, the second, lettered (b), containing the

grant of power 'to determine the actual legitimate prudent original cost' of a licensed project. The word 'prudent' is added here and consistently throughout the act as a qualification of the cost to be determined by the commission for purposes of recapture and rate making. The Water Power Act was the first congressional repudiation of the unstable 'fair value' rule; the net investment in the project is the sum to be paid on recapture and the amount to be used as a rate base. Consistent application of this theory requires the qualification that all costs allowed must have been prudently incurred. The commission interprets the present act in this way, but this interpretation has not been reviewed by the courts and the amendment is desired to eliminate the possibility of doubt on the subject."

"Mr. Wolverton. Speaking on the question of rates, throughout this bill, in different sections, there is this statement, or these words used:

Actual legitimate prudent original cost.

"Can you explain to me what those words mean?

"Commissioner Seavey. You are referring to—(Note—Water Power Act)

"Mr. Wolverton. Well, it occurs in section 202, subdivision (b), in order that you may have the exact wording, but it is used frequently in the bill.

"In other words, the Federal Power Commission is authorized to determine the actual legitimate prudent original cost.

"I am wondering why all of those terms are used, and whether one qualifies the other, or whether they are to be used in conjunction with one another. I have never observed that sort of a basis before.

"Commissioner Seavey. They are used as a composite. The present act contains all of those words except 'prudent'.

"Mr. Wolverton. Well, then, it ought to be very easy for you to explain to me what the meaning of it is, if the act already has it. What is the difference between actual and legitimate, or between legitimate and prudent?

"Commissioner Seavey. The actual cost of a property

might not be a legitimate cost, because of fraud or collusion, or other things that make it not a legitimate cost.

"Now, that is entirely different from actual cost.

"Mr. Wolverton. I can see how the Commission might be asked to pass upon and to determine a matter based upon actual cost, or legitimate cost, or prudent, or original cost, but when you get the combination together I am wondering what the net result will be.

"Commissioner Seavey. That combination, the actual effect is if they are legitimate; the actual cost if they are prudent.

"Mr. Wolverton. All right. You come to the word 'original' cost. Where does that fit into the picture?

"Commissioner Seavey. And, it must be the original cost of the facilities that are concerned. That is, the cost, the original cost, would be different than if some one later on after these facilities had been used or constructed came along and paid a price for them, and instead of using the price that may have been paid at some later date, this provision provides, and the present act provides, that the original cost of it shall be used.

"Mr. Wolverton. And, you say the word 'prudent' is something new?

"Commissioner Seavey. Yes.

"Mr. Wolverton. What is the reason for putting 'prudent' in?

"Commissioner Seavey. The word 'prudent' is put in there to clarify, to make positive, the interpretation that the Federal Power Commission has placed upon the present provisions, which do not include 'prudent.' They have put the interpretation that legitimate original actual cost means prudent cost, and have been proceeding on that theory.

"In order to remove any question about the interpretation of the Commission in the matter, this amendment is offered.

"Mr. Wolverton. I guess you have used enough words.

"Commissioner Seavey. I beg your pardon?

"Mr. Wolverton. There are enough words there, but as to clearness of meaning, I am not certain.

"Commissioner Seavey. This applies only to licensed projects which later on may be recovered by the Federal Government.

* * * * *

"Mr. Huddleston. Mr. Seavey may I direct your attention to the rule of rate making on page 117, subsection (c). (Note: Sec. 211)

"Commissioner Seavey. Yes.

"Mr. Huddleston. Where did that come from?

"Commissioner Seavey. Where did that come from?

"Mr. Huddleston. Where did you take that from?

"Commissioner Seavey. That approximately comes, not wholly from, and is the basis upon which the rates are fixed in California. There is added to these requirements which are not in the California statute, but which exist by administration, in the belief that they should be allowed a return upon a value controlled by the prudent cost of the property.

"Mr. Huddleston. There is nothing like this in the Federal (Water) Power Act.

"Commissioner Seavey. This, in a modified form, is now in the power act.

"Mr. Huddleston. Will you refer us to it?

"Commissioner Seavey. Sections 19 and 20 of the Federal (Water) Power Act.

"Mr. Huddleston. We do not have that before us here. Will you be kind enough to read it for the record?

"Commissioner Seavey. I will read those two sections. I do not know whether I can read out that part. Perhaps I shall read the whole section.

"Mr. Huddleston. Just the part, if you can, that prescribes the rule of rate making.

"Commissioner Seavey. Well, I will read the whole section: section 20 is as follows:

'Sec. 20. That when said power or any part thereof shall enter into interstate or foreign commerce the rates charged and the service rendered by any such licensee, or by any subsidiary corporation, the stock of which is owned or controlled directly or indirectly

by such licensee, or by any person, corporation, or association purchasing power from such licensee for sale or distribution or use in service shall be reasonable, nondiscriminatory, and just to the customer and all unreasonable discriminatory and unjust rates for services are hereby prohibited and declared to be unlawful; and whenever any of the States directly concerned has not provided a commission or other authority to enforce the requirements of this section within such State or to regulate and control the amount and character of securities to be issued by any of such parties or such States are unable to agree through their properly constituted authorities on the services to be rendered or on the rates or charges of payment therefor, or on the amount or character of securities to be issued by any of said parties, jurisdiction is hereby conferred upon the Commission upon complaint of any person aggrieved, upon the request of any State concerned, or upon its own initiative to enforce the provisions of this section, to regulate and control so much of the services rendered, and of the rates and charges of payment therefor as constitute interstate or foreign commerce and to regulate the issuance of securities by the parties included within this section, and securities issued by the licensee subject to such regulations shall be allowed only for the bona fide purpose of financing and conducting the business of such licensee.

'The administration of the provisions of this section, so far as applicable, shall be according to the practice and procedure in fixing and regulating the rates, charges, and practices of railroad companies as provided in the act to regulate commerce, approved February 4, 1887, as amended, and that the parties subject to such regulation shall have the same rights of hearing, defense, and review as said companies in such cases.

'In any valuation of the property of any licensee hereunder for purposes of rate making, no value shall be claimed by the licensee or allowed by the Commission for any projects or projects under license in excess of the value or values prescribed in section 14 hereof for the purpose of purchase by the United States, but there shall be included the cost to such licensee of the construction of the lock or locks or other aids of navigation and all other capital expenditures required by the United States, and no value shall

be claimed or allowed for the rights granted by the Commission or by this act.'

"Mr. Huddleston. That is very different from this provision or rule of rate making you have in subsection (c) here.

"Commissioner Seavey. Well—

"Mr. Huddleston. It is wholly and fundamentally different both in principle and in detail, is it not?

"Commissioner Seavey. Well, but it requires as a rate base approximately the same as is required here.

"Mr. Huddleston. May I venture to differ from your construction.

"This gives as a rule of rate making a single factor for consideration a fair return upon the actual legitimate prudent cost of the properties and so forth.

"Commissioner Seavey. Yes.

"Mr. Huddleston. That factor—

"Commissioner Seavey (interposing). It does not—

"Mr. Huddleston (continuing). That factor in the rule that you have read as now in force as section 20 of the power act is merely one among a number of factors to be considered.

"Commissioner Seavey. I would like to say that it does not exclude the use of other factors, but it limits, it limits the amount that the Commission may allow to a reasonable return upon the legitimate cost.

"Mr. Huddleston. The law that you have read.

"Commissioner Seavey. Yes.

"Mr. Huddleston. Again, I venture to differ from you.

"Commissioner Seavey. That is my interpretation, and not being an attorney—

"Mr. Huddleston (interposing). I am interested in this rule from two points of view: First, because I have very grave doubts as to its constitutionality on that. As you have said, that you are not a lawyer, and I will not interrogate you; but I am wondering whether you consider this a proper rule of rate making.

"Commissioner Seavey. I can only say this, as to its constitutionality—

"Mr. Huddleston (interposing). I do not want to discuss that with you, as you are not a lawyer. You would not help me, if you are not a lawyer, on that.

"Commissioner Seavey. I just want to refer you to the fact that the California commission in the Los Angeles Electric case, which went before the Supreme Court did fix a return upon the prudent historical cost and it was sustained, by the Supreme Court. There were other elements that went in, but that was the basis for the fixation of the rates.

"Mr. Huddleston. I accept your opinion for whatever it may be worth, as you are not a lawyer.

"Commissioner Seavey. I am fortunate not to be a lawyer, sometimes.

"Mr. Huddleston. It is dangerous to venture an opinion about something you have not made a study of.

"Now, I am interested in and the second point of interest to me is this, whether you consider this a proper rule of rate making. I will value your opinion on that.

"Commissioner Seavey. Yes; I do. I believe that investments in legitimate securities that are based upon the historical prudent cost of properties should be protected by a return upon that direct investment.

"Mr. Huddleston. And that is the only factor you think should be considered in making rates?

"Commissioner Seavey. Oh, there are many other things that are considered.

"Mr. Huddleston. You have not put them in this rule.

"Commissioner Seavey. No; I think it is not necessary to put them in there.

"Mr. Huddleston. You have confined the Commission, by this rule, to a single factor.

"Commissioner Seavey. That is true. That is true.

"Mr. Huddleston. They are not allowed to make rates at any more or any less than will yield a fair return upon the cost.

"Commissioner Seavey. The Commission would be

limited to allowing at least a fair return upon the cost; but that is on the lower limit; that is a minimum requirement.

"Mr. Huddleston. The rules do not say so. The rule says that the Commission shall accept whatever may be a fair return as the sole basis in fixing a rate. It does not allow anything on fair value, nor allow anything for depreciation, obsolence, and other factors of that kind.

"Commissioner Seavey. Let us see—not being a lawyer, I cannot read it and interpret it properly—but, let me read this:

> '(c) In determining just and reasonable rates, the Commission shall fix such rate as will allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question.'

"That is a minimum requirement.

"Mr. Huddleston. Where do you get the word 'minimum'? That is not in here.

"Commissioner Seavey. Because that is what the language says.

"Mr. Huddleston. You have just as much authority to say that it is a 'maximum' as a 'minimum.' As a matter of fact, I think it is both minimum and maximum. It is absolute. It allows no latitude for variation. You must do this particular thing and nothing else.

"Commissioner Seavey. I would be gratified if your interpretation is right, because that is the way I believe it should be, but it was not my idea of the provision there that that was so limited.

* * * * *

"Mr. Huddleston. You are familiar with the rule of rate making as laid down in the leading case of *Smyth v. Ames*, I suppose?

"Commissioner Seavey. I have read it, but I do not want to express a legal opinion on it.

"Mr. Huddleston. That is all.

"Mr. Wolverton. Before we leave that, Mr. Commissioner, I would like to ask the question what do you consider prudent.

"Commissioner Seavey. What do I consider prudent?

"Mr. Wolverton. Yes.

"Commissioner Seavey. As a Commissioner, I would consider prudent—you mean of what a prudent cost might be? I would consider that it would be a sound judgment upon the facts that are presented for the consideration of the Commission that is sitting and passing upon what is a prudent cost.

"Mr. Wolverton. Would you judge whether a man had acted prudently or not by the conditions which prevail at the time the matter is before you for determination, or when he had exercised the judgment?

"Commissioner Seavey. No; it would have to be predicated upon the conditions that existed at the time that he made his judgment.

"Mr. Wolverton. That is helpful, because it would be very hard for some of us to qualify as prudent today, if judged by what we did a few years ago.

"Commissioner Seavey. Yes; it would be absolutely unfair and inequitable to try to determine the prudent cost of something that was built in 1920 upon 1935 conditions.

"Mr. Wolverton. The determination of the actual cost would be a very simple matter, would it not?

"Commissioner Seavey. Well, not so simple sometimes, but it is simple as compared with other determinations.

"Mr. Wolverton. I would assume that it is far easier to determine actual cost than it would be to determine prudent cost.

"Commissioner Seavey. Yes; it is.

"Mr. Wolverton. What do you mean by legitimate?

"Commissioner Seavey. I thought I made that plain.

"Mr. Wolverton. You did give an explanation.

"Commissioner Seavey. I would say that again—I think you are an attorney and I am not—

"Mr. Pettengill. He is a former prosecuting attorney.

"Commissioner Seavey. I believe legitimate as used in the present law comprehends a reasonable determina-

tion of a reasonable cost. That is, that it comprehends that a judgment shall be passed as to the reasonableness of the cost. Of course legitimate can be confined very specifically to a definition that you could make for it which might eliminate anything except a legal cost, that is, a cost that was not fraught with fraud or collusion; but I believe that the way that word is used in the Federal power act at the present time, taking into consideration all of the provisions of the act, that it does comprehend that a reasonable cost should be determined and that legitimate has a broader meaning than what it might be confined to if you used a restrictive definition.

"Mr. Wolverton. For that reason I asked you what the term 'legitimate' meant.

"Commissioner Seavey. Yes.

"Mr. Wolverton. I wish to know whether it has a legal significance, or whether it has a broader significance than you have indicated.

"Commissioner Seavey. I think it has a broader and I am sorry I misunderstood your first question.

"Mr. Wolverton. Upon the basis that you have defined legitimate, what is the difference between 'legitimate' and 'prudent'?

"Commissioner Seavey. I do not believe there is very much, but in order to make it sure, we wanted to include that word 'prudent' in the definition.

"Mr. Wolverton. If you are very anxious to make it sure, I would suggest that you use that embellishment that has so recently come into use 'and/or'. I have never quite understood what it meant, if you miss anything then it is covered by that.

"Commissioner Seavey. Well, I do not like those two words either, and neither does the Commission, I guess, and neither did those who drafted the original Water Power Act, so they are running them all together as a composite picture of what they want to accomplish.

"Mr. Wolverton. In this definition, in section 211, the words used are 'actual legitimate prudent cost of the property.'

"Commissioner Seavey. Yes.

"Mr. Wolverton. In the section to which I directed

your attention the word 'original' is used after 'prudent.'

"Why was it used in one place and not in the other?

"Commissioner Seavey. Now, let me get your question. You are referring to—

"Mr. Wolverton. I think it was section 294 to which I first made reference.

"Commissioner Seavey. Oh, one is the water power, the present Water Power Act, and amendments to it, and the other is the regulatory act.

"Mr. Wolverton. Then you feel that there was a purpose in leaving out the word 'original' in one instance?

"Commissioner Seavey. Yes.

"Mr. Wolverton. What was the purpose in leaving it out?

"Commissioner Seavey. Leaving out 'original'?

"Mr. Wolverton. Yes. You understand what I mean. The first section to which I called your attention used 'actual legitimate prudent original cost.'

"Commissioner Seavey. Yes.

"Mr. Wolverton. Now, this other section uses the words 'actual legitimate prudent' and you have directed my attention to the fact that there is a difference in the application of the two sections. For that reason I am asking what is the difference that requires the use of 'original' in one instance and not in the other?

"Commissioner Seavey. You wish to know why in the Federal Water Power Act proper 'original' was used and in the regulatory act 'original' is not used.

"Mr. Wolverton. Yes.

"Commissioner Seavey. Now, from a regulatory standpoint, we do not believe that it is necessary to have that limitation of 'original', because sometimes it is almost impossible to find original cost. Under the water power act the original cost is under the immediate direction of a commission. That is, the construction is made through a license issued, and the contract is made so that so far as the original cost is concerned, that can be determined; but in regulatory matters some of these utilities go back for years. You cannot determine the

original costs and I am not sure that you wish to determine them, if a legitimate prudent price was paid for the property.

"Mr. Wolverton. Well, that confirms what I have had in my mind, actual and original does not mean much from the standpoint which you have given because legitimate and prudent overshadows 'actual or original cost.'

"Commissioner Seavey. It might; there is no question about that.

"Mr. Wolverton. I am inclined to think it would, from the way you look at it.

"Commissioner Seavey. I think it should; I think it would; yes.

"Mr. Wolverton. So from the standpoint of this bill in fixing the basis of rates, we could leave out 'actual' and 'original', and under your theory just let it be determined by legitimate and prudent?

"Commissioner Seavey. Legitimate prudent cost; yes.

"Mr. Wolverton. So the words 'actual' and 'original' are just surplusage.

"Commissioner Seavey. I do not think 'actual' in the new matter there has added very much to it, because that would be controlled—

"Mr. Wolverton (interposing). I do not think it does either, under the view you have expressed.

"Commissioner Seavey. I agree with you."

*(Pages 386, 388, 399-400, 411-414, 414-416)*

Testimony of *Solicitor DeVane*, Federal Power Commission:

"Mr. DeVane. The next amendment will be found on page 5—I beg your pardon—on page 4, under paragraph No. 13. (Note: Water Power Act.)

'(13) "net investment" in a project means the actual legitimate prudent original cost thereof.'

"The word 'prudent' is the new word in that subsection.

"Mr. Pettengill. Is there court authority for that word?

"Mr. DeVane. How is that, sir?

"Mr. Pettengill. Is there court authority for putting that word in?

"Mr. DeVane. Well, we have court authority to the extent that the word has been defined; yes, sir.

"Mr. Pettengill. Well, what does it add to the meaning of the law as it now exists?

"Mr. DeVane. It adds this to the act: The experience of the Commission has shown that in hearings to determine the cost of licensed projects the position is frequently taken that under the definition as used in the act as it is today, the Commission can exercise no control over the expenditures made, no matter how imprudent they are, if the licensee can prove that the expenditures were actually made, and we are unable to show fraud or collusion.

"Now, I might say that the Commission has held to the contrary. The Commission insofar as present licensees are concerned, has already held that expenditures that were improperly made could be disallowed and that it was not necessary to show fraud or collusion in order to disallow them.

"The purpose of this amendment is to stop the licensees from continuing to make that contention in future cases. This amendment, of course, can have no effect upon licenses that have already been issued.

* * * * *

"Mr. DeVane. I endeavored to show on yesterday, how this act would be a complement to State regulations of local rates. I call the committee's attention to section 211 page 116 of the bill, in which the Commission is given the authority to ascertain for the purpose of this title, and title III of title II, the actual legitimate prudent cost of properties of every public utility subject to its jurisdiction. Then I mentioned paragraph (b) of that section, which is merely procedural and gives the Commission access to information for the determination of such costs; and then I was right at the point of asking the committee to permit me to postpone any discussion of subsection (c) of that section at that time—

"Mr. Bulwinkle. You mean subsection (c)?

"Mr. DeVane. Subsection (c) of that section, at this time, because that relates to the powers of this Com-

mission in connection with the fixing of rates and what I am trying to do at this time, before I discuss those matters, is to get clearly before the committee the plan of this bill.

"When I have done that, I think we can discuss these legal questions that you may ask me, with a little better understanding.

* * * * * *

"Mr. DeVane. Yes; in connection with that, may I refer to section 211 (c), on page 117; section 211 (c).

"I think probably I should refer to section 211 in its entirety, but particularly I want to address a few remarks to 211 (c).

"Section 211 authorizes the Commission to ascertain the actual prudent cost of the property of every public utility under its jurisdiction and to require the utilities to file inventories of their property and its cost. It directs the Commission to keep itself informed of the cost of all additions and betterments to utility property. And it provides that in determining just and reasonable rates, the Commission shall fix rates which will allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question. Rate regulation must eventually be based on prudent investment. Recent decisions of the Supreme Court and the respect which the Court has always paid to the constitutional interpretations of the coordinate branches of the government afford grounds for hope that this highly desirable result will be accomplished if the Congress should now definitely adopt the prudent cost rate base. This would present the case to the Court in a new light with a declaration of national policy that it has never had before.

"Now, I direct your attention to the provisions of section 202 which is merely declaratory of the common-law principle that rates shall be just and reasonable. I directed your attention to 211 (a) this morning as being complementary to State regulation. Section 211 (a) will secure a body of information, which I think is most valuable in the administration of this act and as an aid to the State commissions in their regulation of consumers.

"Section 211 (c) provides that in determining just and reasonable rates—I wish to call attention to the way this section is drawn, and to state it has been drawn in this

manner to make sure, as we believe, of its constitutionality. 'In determining just and reasonable rates the Commission shall fix such rate as will allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question.'

"You will observe the section does not say that the Commission shall allow a fair return upon the prudent cost of the property, nothing more or less, but in determining just and reasonable rates, the rates fixed shall be such as will allow a fair return upon the actual legitimate prudent cost.

"The Commission allows what is a fair return, and it cannot go below that, could not fix rates that would allow less than a fair return upon the actual legitimate prudent cost of the property.

* * * * *

"Mr. Wolverton. What will be the net result, the difference in fixing the rate upon a basis of the 'actual legitimate prudent original cost,' as compared with the rate fixed on the 'fair value of the property'?

"Mr. DeVane. What is the advantage—

"Mr. Wolverton (interposing). What will the net result or difference be?

"Mr. DeVane. I cannot say what the result will be.

"Mr. Wolverton. Do you anticipate that it will be a higher rate or a lower rate?

"Mr. DeVane. I anticipate that it will make for lower rates, yes.

"Mr. Wolverton. Notwithstanding the fact that the securities of the companies have all been issued on the basis of rates fixed on a fair valuation of the property?

"Mr. DeVane. No; I do not admit that as a fact; I do not think that securities have been issued on the basis of the fair value of the property. I think in a great many cases you will find securities far exceed the fair value of the property, and I think in other cases you will find that the securities are considerably less.

In theory of the law the amount of securities outstanding has nothing to do with rates, because in fixing the rate you are supposed to disregard the securities.

"Mr. Wolverton. Would the use of the term 'fair value' which has a very definite meaning, as the result of construction by many courts, including the Supreme Court of the United States, preclude the Federal Power Commission from doing the very thing that is to be accomplished—you are supposed to do—by the use of the four words, 'actual legitimate prudent original'?

"Mr. DeVane. Would it preclude them from reaching the same result?

"Mr. Wolverton. Yes.

"Mr. DeVane. In rate cases?

"Mr. Wolverton. Yes.

"Mr. DeVane. No, it would not preclude them from doing it.

"Mr. Wolverton. Then why the necessity for changing the words which are commonly used if the Commission can arrive at the same result by using a term which has had the court's construction?

"Mr. DeVane. I am glad you asked that question, Mr. Wolverton. If you directed the Commission to determine rates on the fair value of the property it would mean that in each one of these rate cases it would be necessary to employ a good many people; it would be necessary for the Commission to spend thousands of dollars; it would impose upon the operating company the necessity of spending $2 to $5 to each one the Commission spent in determining the fair value, and when you got through, in my opinion, you would not have reached a materially different result from that which would be reached in this way. Rates can be determined in this manner at a minimum cost to everyone. After the first determination of the money that is prudently invested in any property, rate investigations will not cost five cents the dollar that is now spent under the present method of fixing rates.

"Mr. Wolverton. Would it not be just as costly to determine what was the actual legitimate prudent original cost as it would be to determine what was the fair value?

"Mr. DeVane. No. And the difference is this: The determination of cost is made once, and it continues thereafter as a fact. The determination of values, as the utilities can show to you is a shifting thing; it is never still; it is never permanent; it is one thing this year and

it is something else another year; it requires a determination to be made in every rate case; what is done in one rate case is thrown out of the window in the next rate case.".

## APPENDIX B.

### COMPOSITE OF SECTION 208 (ORIGINALLY NUMBERED 211) OF THE FEDERAL POWER ACT AS PROPOSED BY THE POWER COMMISSION AND AS ENACTED BY CONGRESS.

The *italicized* language, together with the language of the text, *not stricken,* constitutes the section of the Act in question, *as enacted by Congress.*

The *italicized* language, together with the language of the text *as stricken,* constitutes the section as drafted by the Federal Power Commission, submitted by it to Congress, with extensive supporting discussion, *but rejected by Congress.*

(a) *The Commission* ~~shall have power to ascertain for the purposes of this title and title III~~ may investigate and ascertain *the actual legitimate* ~~prudent~~ *cost of the property of every public utility,* the depreciation therein, and when found necessary for rate-making purposes, ~~and every fact which in its judgment may or does have any bearing~~ other facts which bear *on the determination of such cost* or depreciation, and the fair value of such property.

(b) ~~The Commission may require any~~ every *public utility* upon request shall ~~to~~ *file* ~~with it~~ with the Commission *an inventory of all or any part of* ~~the~~ its *property* ~~of the utility~~ and a statement of the original cost thereof, ~~including only those elements of cost that may be considered for purposes of determining just and reasonable rates under the provisions of this title and title III and the rules and regulations of the Commission. The Commission~~ and *shall keep* ~~itself~~ the Commission *informed regarding the cost of all additions, betterments, extensions, and new construction* of the property of every public utility.

(c) ~~In determining just and reasonable rates, the Commission shall fix such rate as will allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question.~~

## APPENDIX C.

**75th Congress, 1st Session.**

**Calendar No. 1210. Senate Report No. 1162.**

**INTERSTATE TRANSPORTATION AND SALE OF NATURAL GAS.**

---

August 9 (calendar day, Aug. 11), 1937.
Ordered to be Printed.

---

Mr. Wheeler, from the Committee on Interstate Commerce, submitted the following

### REPORT

[To accompany H. R. 6586]

The Committee on Interstate Commerce, to whom was referred the bill (H. R. 6586) to regulate the transportation and sale of natural gas in interstate commerce, and for other purposes, having considered the same, report thereon with a recommendation that it pass without amendment.

Report No. 709 on the bill (H. R. 6586) explains well and analyzes thoroughly the bill. The Committee on Interstate Commerce feel there is nothing they wish to add to this report which for the benefit of the Senate is herewith appended.

---

[H. Rept. No. 709, 75th Cong., 1st sess.]

The Committee on Interstate and Foreign Commerce, to whom was referred the bill (H. R. 6586) to regulate the transportation and sale of natural gas in interstate commerce, and for other purposes, having considered the same, report thereon with a recommendation that it pass.

It was originally introduced as H. R. 4008.

#### General Purposes of the Bill.

The bill is substantially identical with H. R. 12680 which, as amended, was reported by the Committee on Interstate and Foreign Commerce of the Seventy-fourth Congress, second session, with a recommendation that it pass. If enacted, the present bill would for the first time provide for the regulation of natural-gas companies transporting

and selling natural gas in interstate commerce. It confers jurisdiction upon the Federal Power Commission over the transportation of natural gas in interstate commerce, and the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use. The States have, of course, for many years regulated sales of natural gas to consumers in intrastate transactions. The States have also been able to regulate sales to consumers even though such sales are in interstate commerce, such sales being considered local in character and in the absence of congressional prohibition subject to State regulation. (See *Pennsylvania Gas Co. v. Public Service Commission* (1920), 252 U. S. 23.) There is no intention in enacting the present legislation to disturb the States in their exercise of such jurisdiction. However, in the case of sales for resale, or so-called wholesale sales, in interstate commerce (for example, sales by producing companies to distributing companies) the legal situation is different. Such transactions have been considered to be not local in character and, even in the absence of Congressional action, not subject to State regulation. (See *Missouri v. Kansas Gas Co.* (1924), 265 U. S. 298, and *Public Service Commission v. Attleboro Steam & Electric Co.* (1927) 273 U. S. 83.) The basic purpose of the present legislation is to occupy this field in which the Supreme Court has held that the States may not act.

In 1934 24 States produced natural gas, and 35 States consumed it. The annual sale of natural gas in that year amounted to 1,764,988,000,000 cubic feet. The sale of this gas brought a revenue of $394,000,000. Of this amount, about $260,000,000 was in payment for gas transported in interstate commerce. During 1935 there was some increase in the pipe-line mileage and in the transportation of natural gas in interstate commerce.

The average price per thousand cubic feet for domestic use was 74.6 cents; for commercial use, 49.6 cents; and for all other industrial uses, 16.9 cents. This gas was consumed by 7,600,000 customers.

There are today substantially in excess of 50,000 miles of gas pipe lines in the United States. While natural gas has been in use for 50 years or more in this country, and while there was some transportation in interstate commerce prior to 1926, the substantial development in the industry has occurred since that year.

The bill provides for regulation of the exportation and importation of natural gas and authorizes the Commission to ascertain the cost of property used in rendering service; to direct extension or improvement of transportation facilities, and require the interconnection of facilities; to regulate the abandonment of service; to prescribe a uniform system of accounts; to determine proper depreciation rates; to fix rates and charges for natural gas sold for resale for ultimate public consumption; to investigate compacts between the States; to compile information relative to the effect and operation of any compacts between the States; and to make investigations and report to Congress respecting the natural-gas industry. The bill takes no authority from State commissions, and is so drawn as to complement and in no manner usurp State regulatory authority, and contains provisions for cooperative action with State regulatory bodies. Mr. John E. Benton, general solicitor of the National Association of Railroad and Utilities Commissioners, and other representatives of State commissions and municipalities, appeared at the hearing before the committee in support of the bill.

The general attitude of the State regulatory commissions was indicated in a communication from Mr. Benton to the chairman, House Interstate and Foreign Commerce Committee, under date of March 29, 1937, enclosing a copy of a resolution adopted by the executive committee of the National Association of Railroad and Utilities Commissioners on March 26, 1937, as follows:

National Association of Railroad and Utilities Commissioners,

Washington, D. C., March 29, 1937.

Hon. Clarence F. Lea, Chairman, House Interstate and Foreign Commerce Committee, Washington, D. C.

Dear Sir: A joint meeting of the executive committee of this association and of the association's committee on legislation was held on March 26, 1937, for the consideration of legislative matters.

The provisions of H. R. 4008 were considered for the purpose of determining whether that bill will provide regulation of the character requested in the resolution heretofore adopted by this association, and presented at the hearing on March 24, 1936. Consideration was also given to the situation existing in Illinois, where the Illinois Com-

mission finds itself impeded by injunction proceedings in the Federal courts in its undertaking to discover what it costs the interstate pipe-line company to deliver gas in Illinois, although the commission is seeking that information only for the purpose of determining what the reasonable expenses of the local distributing company ought to be, and what price for gas sold in the Chicago areas should be approved by the commission as just and reasonable.

A resolution was unanimously adopted endorsing H. R. 4008, amended as requested on behalf of this association at the hearing on March 24. I attach a copy of the resolution hereto, and ask that it be printed as if presented at the hearing.

Yours very truly,

JOHN E. BENTON, General Solicitor.

---

"Resolution Adopted by the Executive Committee of the National Association of Railroad and Utilities Commissioners on March 26, 1937.

"*Resolved by the executive committee of the National Association of Railroad and Utilities Commissioners,* That the position of said association declared by resolution at its forty-seventh annual convention, in favor of the enactment of Federal legislation providing for the regulation of the interstate transmission and sale of gas at wholesale for resale is hereby reaffirmed; and

"*Resolved further,* That for the purpose of providing such regulations said association endorses H. R. 4008, an act to regulate the transportation and sale of natural gas in interstate commerce, introduced by Congressman Lea, of California, with the amendments proposed thereto at the hearing before the House Interstate and Foreign Commerce Committee on behalf of the association on March 24, 1937; and

"*Resolved further,* That the necessity for such regulation is increasingly imperative, and that the enactment of H. R. 4008, amended as proposed, at the present session of Congress is earnestly urged on behalf of said association."

The bill provides for regulation along recognized and more or less standardized lines. There is nothing novel in

its provisions, and it is believed that no constitutional question is presented.

Your committee believes that this legislation is highly desirable to fill the gap in regulation that now exists by reason of the lack of authority of the State commissions.

In view of the importance of section 1 (b), which states the scope of the act, it seems advisable to comment on certain provisions appearing therein. It will be noted that this subsection of the bill, after affirmatively stating the matters to which the act is to apply, contains a provision specifying what the act is not to apply to, as follows: "but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas."

The quoted words are not actually necessary, as the matters specified therein could not be said fairly to be covered by the language affirmatively stating the jurisdiction of the Commission, but similar language was in previous bills, and, rather than invite the contention, however, unfounded, that the elimination of the negative language would broaden the scope of the act, the committee has included it in this bill. That part of the negative declaration stating that the act shall not apply to "the local distribution of natural gas" is surplusage by reason of the fact that distribution is made only to consumers in connection with sales, and since no jurisdiction is given to the Commission to regulate sales to consumers the Commission would have no authority over distribution, whether or not local in character.

It was urged in connection with earlier bills that there should be inserted at the end of this subsection a proviso as follows:

"*Provided*, That nothing in this Act shall be construed to authorize the Commission to fix the rates or charges to the public for the sale of natural gas distributed locally."

In order to avoid misunderstanding the committee thought it necessary to omit this proviso from the present bill for the following reasons, even though there is entire agreement with the intended policy which would have prompted its inclusion: First, it would have been surplusage if interpreted as it was intended to be interpreted, and, second, it would have been, in all likelihood, a source of confusion if in-

terpreted in any other way. For example, it was felt that in the effort to find a reason for its inclusion it might have been argued that it exempted sales to a publicly owned distributing company, and such an exemption is not, of course, intended. It is believed that the purposes of this proviso, assuming the need for any such provision, are fully covered in the present provision by the language—"but shall not apply to any other * * * sales of natural gas."

## Sectional Analysis of the Bill.

### Section 1. Necessity for Regulation of Natural-Gas Companies.

Subsection (a) contains a declaration of policy, states the necessity for Federal regulation, and defines the scope of that regulation. The subsection declares that the business of transporting and selling natural gas in interstate and foreign commerce for ultimate distribution to the public is affected with a public interest.

Subsection (b) confers jurisdiction upon the Commission over the transportation of natural gas in interstate commerce and the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use.

### Section 2. Definitions.

This section contains definitions of (1) "person", (2) "corporation", (3) "municipality", (4) "State", (5) "natural gas", (6) "natural-gas company", (7) "interstate commerce", (8) "State commission", and (9) "Commission" and "Commissioner". The definitions as they appear are self-explanatory and necessary to the proper administration of the bill.

### Section 3. Exportation or Importation of Natural Gas.

This section provides that after 6 months from the date of enactment no person may export or import natural gas without express approval of the Commission, such approval to be granted unless such exportation or importation will not be consistent with the public interest.

### Section 4. Rates and Charges; Schedules; Suspensions of New Rates.

Subsection (a) imposes upon natural-gas companies the duty of charging just and reasonable rates; and, under the

provisions of subsection (b), undue preferences or advantages are prohibited.

Subsection (c) requires the filing of schedules and contracts relating to all rates and charges subject to the jurisdiction of the Commission; and, under the provisions of subsection (d), no change may be made in such rates except after 30 days' notice.

Subsection (e) authorizes the Commission to hold hearings concerning the lawfulness of any proposed change in rates, and to suspend such rates for not over 5 months, pending such hearing. If the Commission investigation has not been completed before the rates go into effect, the Commission may require the natural-gas company to make refunds if the increase is not approved; and it is provided that adequate bond be furnished to that end. The burden of proof is placed upon the natural-gas company to justify any increase in rates, and the hearing and decision of such matters is given preference over other matters pending before the Commission.

Section 5. Fixing Rates and Charges; Determination of Cost of Production or Transportation.

Subsection (a) authorizes the Commission, after a hearing initiated by it, or upon complaint, to fix charges and reasonable rates for any transportation or sale subject to its jurisdiction.

Subsection (b) authorizes the Commission upon its own motion, or upon the request of a State commission, to investigate and determine the cost of production or transportation of natural gas in cases where the Commission has no authority to establish a rate governing the transportation or sale of such natural gas. This subsection applies only to cases involving transportation of natural gas in interstate commerce and will greatly aid State commissions in their rate-making proceedings.

Section 6. Ascertainment of Cost of Property.

Subsection (a) authorizes the Commission to investigate and ascertain the actual legitimate cost of property, depreciation, and other necessary facts for rate-making purposes.

Subsection (b) requires every natural-gas company upon request to file with the Commission an inventory of its

property, and a statement of the original cost thereof, and to keep the Commission informed regarding additions, betterments, extensions, and new construction.

Section 7. Extension of Facilities; Abandonment of Service.

Subsection (a) authorizes the Commission to direct a natural-gas company to extend or improve its facilities, and to establish physical connection and sell natural gas to any person or municipality engaged, or legally authorized to engage, in the local distribution of natural or artificial gas to the public, upon a finding that such an action is necessary or desirable in the public interest, but does not give the Commission authority to compel such extension or establishment of physical connection when to do so would impair the ability of the natural-gas company to render adequate service to its existing customers or involve the enlargement of transportation facilities.

Subsection (b) requires approval of the Commission by any natural gas company desirous of abandoning any or all of its facilities subject to the jurisdiction of the Commission. The Commission is authorized to approve such abandonment if it finds that the available supply of natural gas is depleted to the extent that the continuance of service is unwarranted or that the present or future public convenience or necessity permits such abandonment.

Subsection (c) provides that no natural-gas company shall undertake the construction or extension of any facilities for the transportation of natural gas to a market in which natural gas is already being serviced by another natural-gas company, or acquire or operate any such facilities or extensions thereof, or engage in transportation by means of any new or additional facilities, or sell natural gas in any such market without a certificate of public convenience and necessity from the Commission. There is a proviso that a natural-gas company already serving a market may enlarge or extend its facilities for the purpose of supplying the increased market demands in the territory in which it operates. There are similar provisions requiring certificates of public convenience and necessity for extensions of service in the Interstate Commerce Act (U. S. C., 1934, title 49, sec. 1 (18-20); the Communications Act of 1934 (U. S. C., 1934, title 47, sec. 214), and the Motor Carriers Act (U. S. C., 1934, title 49, secs. 306, 307, 308).

### Section 8. Accounts, Records, and Memoranda.

Subsection (a) requires natural-gas companies to make and keep such accounts, records, and memoranda as the Commission may direct. However, natural-gas companies are not relieved by this subsection from the duty of keeping such accounts as may be prescribed under the laws of any State.

Subsection (b) authorizes the Commission to inspect and examine accounts, records, and memoranda of natural-gas companies and to have access to the premises of such companies when necessary for that purpose.

Subsection (c) subjects the accounts of any person who controls, directly or indirectly, a natural-gas company, subject to the Commission's jurisdiction, to examination by the Commission.

### Section 9. Rates of Depreciation.

The Commission is authorized to require proper depreciation accounting and to determine and fix adequate depreciation rates, such rates to include amortization. The depreciation charges which a State commission may fix for rate purposes would not be affected by this section.

Subsection (b) requires the Commission to receive and consider the views of State commissions before prescribing depreciation rates.

### Section 10. Periodic and Special Reports.

The Commission by this section is authorized to require periodic and special reports which may be necessary for the proper administration of the act, and prescribe the manner and form in which the reports shall be made. It is declared to be unlawful for any person willfully to hinder or obstruct the making or filing of any information, report, or account required to be made, filed, or kept by the Commission.

### Section 11. State Compacts; Reports On.

Subsection (a) imposes the duty upon the Commission to assemble pertinent information with reference to the subject matter of any proposed compacts between two or more States, and requires the Commission to make such information public and report the same to the Congress, together with such recommendations for further legislation as appear to be appropriate or necessary to carry out the

purposes of such proposed compact and to aid in the conservation of natural-gas resources within the United States.

Subsection (b) requires the Commission to assemble and keep current pertinent information with respect to the effect and operation of any compact between the States heretofore or hereafter approved by the Congress, and to make such information public and report to the Congress and make such legislative recommendations as are appropriate to promote the purposes of such compact.

Subsection (c) authorizes the Commission to avail itself of the services, records, and information of the various departments and agencies of the Government, and authorizes the President to direct that such services and facilities of such agencies be made available to the Commission.

Section 12. Officials Dealing in Securities.

This section makes unlawful personal profit by an official or a director of a natural-gas company through the negotiation, hypothecation, or sale of any security issue by any such company.

Section 13. Complaints.

Under this section any State, municipality, or State commission may complain to the Commission of anything done or omitted to be done by any natural-gas company in contravention of the provisions of the bill.

Section 14. Investigations by Commission; Attendance of Witnesses; Depositions.

The Commission is authorized by subsection (a) to investigate any violation of the provisions of the Natural Gas Act, and may make available to State commissions and municipalities any information concerning the matters to which the bill relates.

Subsection (b) provides that the Commission may, after a hearing, determine the adequacy or inadequacy of the gas reserves held or controlled by any natural-gas company or by anyone on its behalf, including its owned or leased properties or royalty contracts, and may also, after hearing, determine the propriety and reasonableness of the inclusion in operating expenses, capital, or surplus, of all delay rentals or other forms of rental or compensation for unoperated lands and leases.

Subsections (c) and (d) provide for the issuance of subpenas and the attendance of witnesses, and in the event of refusal to attend or produce books or records, the Commission is given recourse to the courts. A willful failure to attend as a witness or to produce books or records is made a misdemeanor, punishable by fine of not more than $1,000 or imprisonment of not more than 1 year, or both.

Subsections (e), (f), and (g) authorize the taking of testimony by deposition, either in the United States or in a foreign country. Witnesses before the Commission and witnesses giving depositions as well as the person taking the deposition are entitled to the same fees as are paid for like services in the courts of the United States.

No person is excused from giving testimony because it may be self-incriminating, but under subsection (h) the person so testifying may not thereafter be subject to any penalty or forfeiture for or on account of any transaction or thing concerning which he is compelled to testify or to produce evidence. This exemption does not, however, relieve a party from prosecution for perjury.

Section 15. Hearings; Rules of Procedure.

Subsection (a) provides that hearings under the Natural Gas Act may be held before the Commission or any member or representative designated by the Commission. It authorizes the Commission to admit as a party to any proceeding any interested State, State commission, municipality, or private party in accordance with such rules and regulations as the Commission may prescribe.

Subsection (b) authorizes the Commission to adopt rules of practice and procedure governing all its hearings and proceedings. It provides also that no informality in any proceeding shall invalidate an order or regulation issued under the authority of the act.

Section 16. Administrative Powers of Commission; Rules, Regulations, and Orders.

This section contains a general grant of administrative powers to perform necessary acts, issue orders, rules, and regulations and prescribe the form of documents to be filed with the Commission.

Section 17. Use of Joint Boards; Cooperation with State Commissions.

Subsection (a) provides that the Commission may refer any matter arising in the administration of the act to a board to be composed of a member or members from the State or each of the States affected or to be affected by such matter.

Subsection (b) authorizes the Commission to confer with any State commission regarding rate structures, costs, accounts, charges, practices, classifications and regulations of natural-gas companies, and to hold joint hearings with any State commission in connection with any matter with respect to which the Commission is authorized to act.

Subsection (c) provides that the Commission shall make available to the several State commissions such information and reports as may be of assistance in State regulation of natural-gas companies, and further provides that the Commission may, when it can do so without prejudice to the efficient and proper conduct of its affairs, make available to a State commission, upon request, any of its trained rate, valuation, or other experts, as witnesses subject to reimbursement of their compensation and traveling expenses.

Section 18. Appointment of Officers and Employees.

This section authorizes the Commission to appoint experts without regard to civil-service laws and other employees subject to the civil-service laws, and to fix salaries in accordance with the Classification Act of 1923.

Section 19. Rehearings; Court Review of Orders.

Subsection (a) authorizes parties to a proceeding before the Commission to apply for a rehearing within 30 days after the issuance of an order by which such party is aggrieved. The Commission is given power to abrogate or modify its order upon such application. Unless it acts upon the application within 30 days, the application may be deemed to have been denied. No proceeding for court review of an order of the Commission is to be brought unless an application for rehearing shall have been filed.

Subsection (b) provides for review of the Commission's orders by the circuit courts of appeals and the Court of Appeals of the District of Columbia. No objection to any order is to be considered by the court unless it was urged before the Commission in the application for rehearing.

unless there was reasonable ground for failure to raise it on the application. Findings of the Commission as to the facts, if supported by substantial evidence, are made conclusive, but the court may upon application order additional evidence to be taken before the Commission. The judgment of the court is subject to review by the Supreme Court of the United States upon certiorari or certification.

Section 20. Enforcement of Act; Regulations; and Orders

This section authorizes the Commission to bring a civil action in the proper district court to enjoin acts or practices in violation of the act or any rule, regulation, or order thereunder and to enforce compliance therewith.

Subsection (b) confers upon the courts of the United States jurisdiction to issue writs of mandamus commanding compliance with the act and rules, regulations, or orders thereunder.

Subsection (c) authorizes the Commission to employ such attorneys as it needs for its legal work.

Section 21. General Penalties.

Subsection (a) imposes a criminal penalty of fine, imprisonment, or both upon any person who willfully and knowingly violates the provisions of the act.

Subsection (b) provides for a fine for violations of the rules, regulations, and orders issued under authority of the act.

Section 22. Jurisdiction of Offenses; Enforcement of Liabilities and Duties.

This section imposes appropriate jurisdiction upon the courts of the United States over cases arising under the act.

Section 23. Separability of Provisions.

This is the usual separability section saving the rest of the act in case of a decision holding any part invalid.

Section 24. Short Title.

The act may be cited as the "Natural Gas Act".

(Emphasis added.)

## APPENDIX D.

### COMMENT UPON AND ANALYSIS OF VARIANT POSITIONS AND CONTENTIONS OF FEDERAL POWER COMMISSION WITH RESPECT TO THE PRINCIPLE OF "FAIR VALUE" AS THE RATE BASE OF ELECTRIC AND GAS UTILITIES.

During the eight-year period from the effective date of the Federal Power Act (August 26, 1935) and the effective date of the Natural Gas Act (June 21, 1938) to the present time, the Federal Power Commission has taken various and divergent positions in its decisions, reports, briefs and other public announcements, as to the proper and lawful rate base of those utilities over which it has rate-regulatory control under the Federal Power Act and the Natural Gas Act. The eight-year period, under the circumstances, divides itself into three shorter intervals, to-wit: (A) Years 1935-1940, (B) Year 1940, and (C) Years 1941-1943.

#### (A) YEARS 1935-1940.

During this period the Power Commission accepted the principle of "fair value" as controlling, and made no contention that Congress, either in the Federal Power Act or in the Natural Gas Act, abrogated the principle of "fair value" or established, or authorized the Commission to establish, the so-called "actual legitimate prudent cost" rate base. This is evident from the following:

(1) The Commission, reporting for the year 1935, declares:

> "The Public Utility Act of 1935 deals with a twofold problem. In title I of the new statute the Congress has asserted its jurisdiction over the financial structure and practices of holding-company systems with a view to the elimination of the economic burdens which holding-company control had placed upon local operating utilities. In title II the Congress has established regulatory control over the interstate activities of electric utilities which were beyond the constitutional or effective administrative control of the States, and has set up machinery for Federal assistance to State regulatory bodies in their efforts to accomplish effective public regulation.
>
> "*New Powers Conferred Upon the Commission.*"
>
> "The authority to fix rates over that part of interstate energy which is sold wholesale for resale is one of the

powers conferred by title II upon the Commission. This power was held to be beyond the authority of the States by the United States Supreme Court in *Public Utilities Commission v. Attleboro Company,* 273 U. S. 83. The object of this provision is to insure reasonable wholesale rates and to prevent interstate companies from discriminating in favor of consumers of one State at the expense of consumers of another State. The act does not give the Federal Commission any authority over local rates for electric service, this function being reserved exclusively to the States."

*Annual Report, 1935, Federal Power Commission, pp. 1-2.*

(2) The Commission, reporting for the year 1937, states:

*"Prudent Investment Rule in Rate-Making Urged Upon the Supreme Court."*

"During the past generation the growth of public utility operations has raised complex administrative problems not the least of which has been the evolution of an adequate workable rule for fixing some base upon which to predicate fair rates of return that would insure financial stability to operating companies and provide consumers with efficient service at reasonable rates. The fact that no adequate and workable rule has been evolved has been due in large part to an interpretation placed by the Supreme Court upon the fair value of utility property for rate-making purposes, in a line of decisions starting with the case of *Smyth v. Ames,* decided in 1898.

"As this issue, important alike to this Commission and to State regulatory agencies throughout the country, was involved in the case of *Railroad Commission of the State of California v. Pacific Gas and Electric Company,* pending before the United States Supreme Court, the Federal Power Commission, by leave of the Court, was permitted to file a brief *amicus curiae,* and its general counsel to appear in oral argument when the case was heard on November 11, 1937.

"This Commission entered the case for the purpose of defending the constitutionality of the prudent investment principle and to urge that the Court reverse the doctrine of *Smyth v. Ames,* adopted 39 years ago, *which requires consideration of reproduction cost as an element in de-*

*termining the fair present value of utility property for rate-making purposes.*

* * * * *

"Under the Federal Water Power Act of 1920 public utility companies securing license *were required to consent* to the use of net investment (the statutory equivalent for prudent investment) in the licensed project as a rate base in those situations in which the Commission could prescribe rates. The amendment of 1935 placing under the jurisdiction of the Commission interstate electric utilities did not expressly prescribe prudent investment as the base for rate-making purposes, but if the Supreme Court should approve as constitutional the theory of rate making for which the Commission is contending, the language of the amendment of 1935 would be sufficiently broad to enable the Commission to apply the prudent investment rule in fixing those rates which it is authorized to regulate.

"The Commission pointed out that since the Commission is standing on the threshold of a new era of Federal regulation involving an industry which for the first time has been subjected to the regulatory power of the Congress and is faced with the important function of rate making, it is deeply concerned in the establishment of a legal principle which will be consistent with and not obstructive to a sound administration of the rate-making power.

"The position taken by the Commission is that *if it is to be required under the Constitution, in fixing electrical rates to consider reproduction cost as an essential element in the determination of a rate base,* its administrative task will be well-nigh impossible of performance. It expressed the belief that a sound basis—sound in administration, in economics, and in law—upon which the public utility properties should be valued for rate-making purposes is the prudent investment in those properties, and that such a basis is entirely consistent with the requirements of the 5th and 14th Amendments of the Constitution.

"It was urged upon the Supreme Court that the rule of *Smyth v. Ames,* however much it may have been justified when applied to the facts of another generation, has no

justification in economics or in law when applied to the realities of the present day." (Emphasis ours.)

*Annual Report, 1937, Federal Power Commission, pp. 10-11.*

(3) The Commission, reporting for the year 1938, says:

"The decision of the Supreme Court in the case of *Railroad Commission of the State of California v. The Pacific Gas and Electric Co.*, in which the Commission filed a brief *amicus curiae*, and its general counsel participated in oral argument, adopted the view which the Commission had urged upon the Court that the Railroad Commission of California, in refusing to give any probative weight to evidence of reproduction cost in determining the proper rate base, had not deprived the Pacific Gas and Electric Co. of due process of law. The Supreme Court remanded the case to the District Court with instructions to make findings as to whether the rate fixed by the State Commission resulted in confiscation of the company's property. It is extremely significant that upon remand the District Court held that the rate base fixed by the Railroad Commission of California, without giving effect to evidence of reproduction cost of the company's properties, was a proper basis upon which to permit the company a reasonable rate of return."

*Annual Report, 1938, Federal Power Commission, pp. 30-31.*

(4) The Commission in its decision in case of *City of Los Angeles v. Nevada-California Electric Corp.*, Jan. 25, 1940, 32 P.U.R. (n.s.) 193, in determining a rate base and fixing the rates of the corporation therein involved, *did not declare, and so obviously had not then discovered, as now claimed,* that five years earlier in 1935 Congress had discarded the principle of "fair value" as the utility rate base under Section 208 of the Federal Power Act. The Commission, at page 203 of 32 P.U.R. (n.s.) declares:

"However, we believe the original cost of construction of the Boulder canyon line is the best evidence of the amount to be used as a rate base in this proceeding."

The Commission cites in support of this conclusion: *Clark's Ferry Bridge Co. v. Pennsylvania Public Service Commission* (1934), 291 U. S. 227, 54 S. Ct. 427, wherein this

Court held, in recognition of the governing principle of "fair value," that under the facts in that case the "reasonable cost of the structure furnished a proper basis for determining its *fair value.*" (Emphasis ours.)

**Comment:** Thus, as late as the early portion of the year 1940, the Power Commission had not undertaken to outlaw "fair value" either in its annual reports or in its decisions.

**(B) YEAR 1940.**

The Commission, reporting for the year 1940, proclaims:

"Space does not permit an extended discussion of all the details inherent in the regulatory problem. *Suffice it to say that the complications resulting from the 'fair value' theory, with its reproduction costs, its going value, its observed depreciation, etc., pose but a part of the problem which constantly confronts those charged with the responsibility for making regulation reasonably effective in the public interest.*

"The machinery for handling the regulatory problem cannot safely be confined to old methods. The regulatory agency is in fact a 'tribune of the people' designed to 'furnish protection to rights and obstacles to wrongdoing which, under our new social and industrial conditions, cannot be practically accomplished by the old * * * procedures' used in dealing with adversary suits in the law courts.

* * * * *

"The following important developments in rate making policy are reflected in the Commission's formal decisions issued during the last year:

"1. *The insistence by the Commission on a prudent investment rate base.*" (Emphasis ours.)

*Annual Report, 1940, Federal Power Commission, pp. 13, 62.*

**Comment:** It is to be observed that in 1940 the Commission, in seeking to revolutionize the law of rate base, *was undertaking to do so on its own power.* It is significant that *at that time* no contention was made that the governing principle of "fair value" had been cast aside and abrogated in the Federal Power Act (1935) or the Natural Gas Act (1938).

**(C) YEARS 1941-1943.**

(1) Thereafter, beginning with the case of "*In the Matter of Chicago District Electric Generating Corporation,*" *supra* (July 16, 1941), the decisions of the Commission departed radically from its own previous announcements, as well as the law of the land. The Commission, *In the Matter of Cities Service Gas Company* (July 28, 1943) (not officially reported—Comm. Docket No. G-141) expressly excludes and discards all evidence of "fair value," under the asserted authorization of Section 6(a) of the Natural Gas Act, and declares, by its reference to *The Matter of Chicago District Electric Generating Corporation, supra,* that such also was the intent and effect of its earlier ruling in that case.

(2) However, and strangely, in 1942, in the two extensive briefs filed by the Commission in this Court, in *Federal Power Commission v. Natural Gas Pipeline Company,* 315 U. S. 575, wherein the Commission renews extensively its attacks upon "the doctrine of *Smyth v. Ames*" (See *Railroad Comm. v. Pacific Gas & Electric Co.* (1938), 302 U. S. 388; *Driscoll v. Edison Light & Power Co.* (1938), 307 U. S. 104), no slightest suggestion was made that Congress, *as now contended,* had established or authorized the so-called "actual legitimate prudent cost" rate base and discarded and abrogated "fair value" as the controlling principle, in the Federal Power Act and the Natural Gas Act.

(3) Counsel for the Power Commission (George Slaff), appearing before the Public Utility Section of the American Bar Association in August, 1942, asserted in reliance on the special concurring opinion of Justices Black, Douglas and Murphy in the *Natural Gas Pipeline Company* case, *supra* (March 16, 1942), that fair value had been discarded and abrogated in that case. This assertion is made despite the statement of the Justices: "As we read the opinion of the Court, the Commission is now freed from the compulsion of admitting evidence on reproduction cost, or of giving any weight *to that element of fair value.*" (Emphasis ours.) Commission Counsel declared with finality:

"I look forward with avid anticipation to the gymnastics—intellectual or otherwise—with which some of you

here who represent the industry may attempt to dispel the rigor mortis of fair value which set in on March 16, 1942."

It seems evident that Counsel was not certain of his conclusions as to the force and effect of this Court's opinion in that case. Perhaps he had read the significant language of *Chief Justice Stone*, speaking for six members of the Court, who at page 590 of 315 U. S. declared: "*The total value* of the companies' plant, including equipment in excess of immediate needs when beginning business, has been included in the rate base adopted." (Emphasis ours.) For here is the express recognition of the application of the principle of value in that case.

And so later in his address we find Counsel declaring:

"*Consider first the pattern set by the Federal agencies.* No one can avoid the plain unvarnished fact that as far as both the Federal Power Commission and the Securities and Exchange Commission are concerned, fair value has been relegated to the limbo of outmoded doctrines." (Emphasis ours.)

**Comment:** Not Congress nor the Courts, but "the federal agencies," identified as the Federal Power Commission and the Securities and Exchange Commission, it seems have relegated to the limbo of outmoded doctrines" the principle of "fair value."

(4) The latest and most sweeping contention of the Commission with respect to its authority under the terms of the Natural Gas Act is as follows:

"The Natural Gas Act confers upon the Commission *a broad field of discretion for selection of an appropriate rate base.* This authority was upheld by the Supreme Court in the *Natural Gas Pipeline Company* case. Significantly, the Court did not specify so-called fair value, nor 'present value,' in applying its test; but it held that no 'single formula or combination of formulas,' governs rate base determinations (cf. 315 U. S. at p. 586)." (Emphasis ours.)

*Brief Fed. Power Com.* (August 30, 1943), *Canadian River Gas Co. v. Federal Power Comm.* (No. 2551, C.C.A. 10th Circ.) p. 34.

It thus appears that the Commission now proposes to

assume authority at large and at will to impose, from time to time in its rate-regulatory activities, whatever rate base it deems "appropriate." It would seem that if such a charter of authority may be thus developed, the legislative functions of Congress may be dispensed with entirely.

The Commission also assumes that when this Court in the *Natural Gas Pipeline Company* case *supra* stated, "The Constitution does not bind rate-making bodies to the service of any single formula or combination of formulas," the principle of "fair value" was intended to be covered thereby, as being a mere formula, instead of the governing principle and end result. This Court as early as *1912* declared the same thing in *Simpson v. Shepard*, 230 U. S. 352, 33 Sup. Ct. 729, 754. To the same effect are numerous decisions of this Court. See *Los Angeles Gas Company v. Railroad Commission*, 289 U. S. 287, 306, 53 Sup. Ct. 637, 644, and cases cited.

Yet the Commission, at this late date, asserts that when the Court in *1942* repeated its former identical declarations dating back to *1912*, the *1942* declaration is revolutionary, and does not mean the same thing as the same declarations made and several times repeated during the preceding 30 years.

(5) The claim frequently made that the Commission in arriving at its so-called "original cost," "actual legitimate cost" and "prudent investment" rate base "considered the evidence as to the claimed cost and the alleged value of the Company's property," is merely a self-serving tug by the Commission at its own boot straps. The legislative and judicial history of the Federal Power Act and the Natural Gas Act conclusively establishes the impropriety of any such contention. It is, of course, true that the Commission, before Congress, in its reports, in its public statements and in its opinions, has persistently and deliberately attempted to outlaw "fair value" as "the law of the land," and substitute therefor so-called "actual legitimate prudent cost." We use the word "impropriety" advisedly, for the Power Commission is a mere administrative agency, not possessed of either legislative powers or judicial functions, entitling it to make and declare "the law of the land." From the Commission Opinion, *Re Chicago District Electric Gen-*

*erating Corporation* (July, 1941), 39 P.U.R. (n.s.) 263, 269-272 to its latest Opinion (No. 95, July 28, 1943), *Re Cities Service Gas Company*, the rejection by the Commission of "fair value" has been uniform and complete. We quote again from its Opinion last rendered in *Re Cities Service Gas Company:*

"*Exclusion of 'Fair Value' Evidence.*

"At the threshold, we are met with the Company's contention that the trial examiner improperly excluded evidence of reproduction cost and *so-called* 'fair value' of the properties. Our views as to why such evidence should be excluded have been stated in earlier opinions (Citing: *Detroit v. Panhandle Eastern Pipe Line Company, et al.*, 45 P.U.R. (n.s.) 203, 208-210; *Re Chicago District Electric Generating Company*, 39 P.U.R. (n.s.) 263, 269-272), and need not be amplified here."

How then can it be said that consideration is given to "fair value," when the entire principle of "fair value" is rejected by the Commission. "Fair value" is treated as simply non-existent, and so obviously is not considered at all.

For example, "fair value" being "the law of the land," which principle the Commission rejects, its conclusions as to the so-called "actual legitimate cost" and "prudent investment" rate base are wholly irrelevant and without authority of law. There is no legal basis for such administrative determination. *It is not here a question of what evidence is or is not proper and admissible to establish "fair value," or what conclusions as to "fair value" may properly be drawn from evidence of original or historical cost (Los Angeles Gas Co. v. Railroad Comm.*, 289 U. S. 287, 309, 53 Sup. Ct. 637, 645). We are confronted with the rejection of the principle of "fair value" in its entirety.

"• • • If an order is valid only as a determination of policy or judgment which the agency alone is authorized to make and *which it has not made*, a judicial judgment cannot be made to do service for an administrative judgment. • • •

• • • • • •

"That the scope of such review is narrowly circumscribed is beside the point. For the courts can not exer-

cise their duty of review unless they are advised of the considerations underlying the action under review.

* * * * *

"* * * *if the action is based upon a determination of law as to which the reviewing authority of the courts does come into play, an order may not stand if the agency has misconceived the law.*

* * * * *

"* * * an administrative order can not be upheld unless the grounds upon which the agency acted in exercising its powers were those upon which its action can be sustained." (Emphasis ours.)

*Securities and Exchange Comm. v. Chenery Corp.*, (1943) ..... U. S. ....., 63 Sup. Ct. 454, 459, 462.

"* * * Only when the statutory standards have been applied can the question be reached as to whether the findings are supported by evidence. * * *"

*United States v. Carolina Freight Carriers Corp.*, 315 U. S. 475, 489, 62 Sup. Ct. 722, 730.

To the same effect this Court, speaking through *Chief Justice Stone*, with respect to the authority of the Federal Power Commission under the Natural Gas Act, recently declared:

"* * * Agencies to whom this legislative power has been delegated are free, *within the ambit of their statutory authority*, to make the pragmatic adjustments which may be called for by particular circumstances. *Once* a fair hearing has been given, proper findings made, and *other statutory requirements satisfied, then* the courts cannot intervene in the absence of a clear showing that the limits of due process have been overstepped. * * *" (Emphasis ours.)

*Federal Power Comm. v. Natural Gas Pipeline Co.* (1942), 315 U. S. 575, 586, 62 Sup. Ct. 736, 743.

**Conclusion.** The above summary of Power Commission position and decision as to *rate base* supplements the impressive legislative history showing that that body deems itself either exempt from the restraints of law or possessed of a virtually unlimited "discretion." In either event the

lawful source of such asserted authority is not disclosed. In fact the entire absence of such authority is affirmatively establised by the unambiguous terms of *Section 6* of the Natural Gas Act and *Section 208* of the Federal Power Act. The statutory construction indulged by the Commission involves and requires both additions to, eliminations from and substitutions for the statutory words and concepts to produce the meaning urged by it. The Commission "construction," so-called, amounts to far-reaching administrative legislation, nothing less and nothing else.

## BRIEF OF STATE OF WEST VIRGINIA AS AMICUS CURIAE

This Brief is filed in the present proceedings on behalf of the State of West Virginia, pursuant to Paragraph Nine of Rule Twenty-seven of the Rules of the United States Supreme Court.

## OPINION BELOW

The opinion of the Circuit Court of Appeals on the issues here involved is officially reported in 134 F. (2d) 287; and has been included in the Record at R. IV, 169-207.

## JURISDICTION

The judgement of the Circuit Court of Appeals, with which the State of West Virginia is in general agreement, was entered on February 16, 1943, (R. IV, 207).

The petitions for writs of certiorari were granted by this Court on May 17, 1943, (___ U. S. ___, 63 S. Ct. 1105, 87 L. Ed. 995, (1943); R. IV, 210).

The jurisdiction of this Court in these causes has been invoked under Section 240(a) of the Judicial Code, as amended by the Act of February 13, 1925, (28 U. S. C., Sections 346 and 347), and under Section 19 (b) of the Natural Gas Act of 1938, (52 Stat. 831; 15 U. S. C., Section 717r [b]).

## STATUTES INVOLVED

The Natural Gas Act of 1938 (52 Stat. 821; 15 U. S. C., Sections 717 *et seq.*), which became effective on June 21, 1938, is here involved. Prior to that date, there was no statutory background whatsoever.

West Virginia Tax Statutes, (Code of West Virginia, Chap. 11, Articles 6 and 13), are also involved.

## CONSTITUTIONAL PROVISIONS INVOLVED

The Fifth and Tenth Amendments to the Constitution of the United States are likewise involved in this litigation.

## QUESTIONS PRESENTED

1. Whether, for rate-making purposes under the Natural Gas Act, the Commission may wholly disregard the ultimate effect upon the economy and well-being of the State of West Virginia, and upon the citizens of West Virginia, of the valuations placed on gas-utility properties.

2. Whether, in the valuation of gas fields and gas horizons, the Commission may deliberately assign over to out-of-state domestic and industrial consumers the entire "advantage of the discovery value" of productive acreage in West Virginia.

3. Whether, for such rate-making purposes, the Commission may completely ignore the legal interest of the lessors of gas-producing leaseholds, in attempting to arrive at a value for West Virginia gas resources.

4. Whether, in drastic reduction of utility values, the Commission may utterly fail to take into account the paramount need for conservation of West Virginia's diminishing gas supply; and may thus fix minimum valuations which discourage exploratory search for new gas deposits, while hastening the abandonment of high-cost, low-yield marginal wells.

5. Whether, by inclusion in the utility rate-base of all by-product operations of an affiliate company, the Commission may accordingly control, in one way or another, investigatory development and research.

6. Whether the Natural Gas Act requires that rates and charges for and in connection with the transportation or sale of natural gas in interstate commerce must be just and reasonable to the state of production, (i. e., in this instance West Virginia),—and to the owners of gas and gas-producing lands in that state,—as well as to the consumers of gas.

7. Whether the rates and charges so ordered by the Commission in these proceedings are just and reasonable to the State of West Virginia, and to its citizens who own gas and gas-producing lands.

8. Whether the Commission's valuation of the properties of Hope Natural Gas Company did disregard the

economy and well-being of the state of production, assign to out-of-state consumers the entire "discovery value," did ignore the legal interests of lessors of gas-producing leaseholds and did discourage exploration and research, and was therefore arbitrary and capricious; and whether the ordered rates and charges were thereby rendered unjust and unreasonable.

9. Whether, under the guise of interstate rate-making, the Commission may, in fact, regulate "the production or gathering of natural gas," despite the explicit statutory provision to the contrary.

10. Whether, by the terms of the Natural Gas Act, the Commission is to value West Virginia's gas reserves as of June 21, 1938, (when the interstate gas traffic was first made subject to federal regulation), or whether the Commission may instead examine into the accounting practices of decades ago, (during which the operating company was a private industry), and thereby retroactively hold the company to have been a public utility even prior to 1938, and retrospectively value its properties.

## STATEMENT OF THE CASE

This proceeding was instituted on July 6, 1938, only fifteen days after the effective date of the Natural Gas Act. The original complaint was filed with the Federal Power Commission by the City of Cleveland, Ohio. It complained of the wholesale rates charged by Hope Natural Gas Company on natural gas sold to East Ohio Gas Company, the distributing company serving Cleveland and other Ohio cities. Subsequently, other parties were permitted to intervene.

By its opinion and order, the Federal Power Commission determined that the gross proceeds derived by Hope Natural Gas Company from the production, handling and sale of natural gas in future years, should be reduced by

the sum of approximately $3,600,000. *per* year. Hope Natural Gas Company thereupon filed its petition for review with the United States Circuit Court of Appeals for the Fourth Circuit, and that Court reversed the order of the Commission. The proceeding has now been brought to this Court upon petitions for writs of certiorari filed by the Federal Power Commission, by the cities of Cleveland and Akron, Ohio, and by the Pennsylvania Public Utility Commission.

The tax revenues of the State of West Virginia, and of many of its counties and municipalities, are derived in part from levies imposed upon the true and actual value of properties of natural gas companies, including gas lands, gas leaseholds and gas wells. All of the gas-producing and transporting properties operated by Hope are located in West Virginia. The West Virginia Board of Public Works has fixed the "true and actual value" of Hope's properties, *for West Virginia property-tax purposes*, at $53,338,000. (Ex. 108, Supp. pp. 391-393; and R. 5431-5433). In contrast, the Federal Power Commission has sought herein to establish an interstate rate-base of $33,712,000. *for interstate rate-making purposes.* Should the latter method of valuation be finally sanctioned, there would immediately be a great and irreparable loss of revenue to the State of West Virginia, with serious injury consequent to the school system and other governmental functions. West Virginia also derives a part of its revenues from a tax levied upon the privilege of engaging in the business of producing natural gas, and measured by the gross proceeds derived from the sale thereof by the producer; and the reduction in gross proceeds ordered by the Commission would likewise cause a severe loss of revenue.

The State of West Virginia (as well as the Public Service Commission of West Virginia), intervened in the

consolidated proceedings before the Federal Power Commission. Briefs were filed, and oral arguments made to the Commission. Neither the Commission's order nor its opinion took any cognizance whatsoever of the position of the State of West Virginia; nor did the Commission anywhere refer to the injurious effect upon the fundamental economy of the State of such far-reaching gas-rate reductions.

From the outset, West Virginia has taken the stand that, in fitting the Natural Gas Act into the federal scheme, the Federal Power Commission must arrive at rates and charges which are just to the state in which natural gas is produced, as well as to distant consumers of the gas. Either the Commission must find formulas for the law's application which result in justice being done within the framework of the Act, or states of production may perhaps find ways outside of the Act to escape its more serious injuries. Neither the federal nor the state authorities can desire that eventuality to occur. It will be the purpose of this Brief to demonstrate that the administrative result achieved in the Hope case brings consequences which are unjust to West Virginia and its citizens; and these unfairly depress the value of gas, gas lands and gas leaseholds, unduly restrict development of their natural resources, and arbitrarily transfer their properties to the residents of other states without just compensation therefor.

When the proceeding was taken to the Circuit Court of Appeals by the appropriate review procedure, West Virginia deemed it inadvisable then to continue actively as an intervening party in the various cases, lest its interest in the broader phases of the issue be misinterpreted. The Federal Power Commission had throughout insisted on viewing these proceedings as an ordinary contest primarily between a single producer of natural gas and its

interstate customers; and had seemed unwilling to regard the contentions of the State as having any sort of independent significance. Under such circumstances the State of West Virginia did not participate further in the hearings before the Circuit Court of Appeals. Decision was made, however, to appear as Amicus Curiae in any future argument of the cause before the Supreme Court of the United States, in order that full presentation of the important questions involved in interstate valuation of natural resources might thus be had.

The present Brief as Amicus Curiae is now accordingly filed before this Court.

## SUMMARY OF ARGUMENT

West Virginia contends that in determining both the rate-base and the rate, the Federal Power Commission has steadfastly refused to give any consideration whatsoever to the economic welfare of the State of West Virginia and of its citizens; and the Commission's decision would now operate to transfer a considerable part of the mineral wealth of West Virginia over to citizens of Ohio and Pennsylvania. The Commission seeks thus to deprive West Virginia and its citizens of their property without due process of law or just compensation, and to invade unconstitutionally the reserved powers of the State.

### I

A. The State of West Virginia, as Amicus Curiae, urges the importance of a fair valuation of its natural gas resources in the economy and well-being of the State. First and foremost, the State has a direct sovereign interest in governmental revenues from its natural gas industry, for without such tax income the essential services of the State must inevitably suffer. The Court has re-

cently recognized the significance of such a public interest by its decision in *Burford* v. *Sun Oil Co.*, --- U. S. ---, 63 S. Ct. 1098, 1100, 87 L. Ed. 999, 1001-1002 (1943). And similarly, in this governmental capacity, the paramount need for conservation must be brought to the attention of the Court.

B. Again, the State may now intervene, in behalf of its citizens, to insure an orderly marketing of its natural resources so as to promote their prosperity and welfare. Since the operating company seldom, if ever, owns the gas reserves in fee simple, it is also proper for the State to propose that the interests of the *lessor*, as well as those of the *lessee*, ought to be fairly appraised in the determination of the interstate rate-base.

C. Finally, to the extent that the State is itself a proprietor of gas fields, it should here protest against any administrative action which might, in the long run, impair the worth of that ownership. Otherwise, its mineral wealth could later be seriously depreciated in value through the policies of the Federal Power Commission; and any contention that the methods of valuation employed were confiscatory would then come too late.

II

West Virginia also contends that the Federal Power Commission has exceeded its jurisdiction under the Natural Gas Act, and has actually applied the provisions of the Act to production or gathering properties, despite the explicit statutory provision to the contrary contained in Section 1(b) of the Act.

III

Under the formulas devised and applied by the Federal Power Commission in this case, the value of the remaining mineral resources of West Virginia will be controlled

by the accidental cost of the mere facilities required to produce them, without regard to their worth either as a fuel or as raw material for commercial products. The manner in which the Commission has construed and applied the Act fails thus to accord with that proper adjustment of local and national interests required by the federal Constitution, and by the federal system.

## BACKGROUND OF WEST VIRGINIA'S INTERVENTION

It has become necessary for the State of West Virginia to explain here the legal and factual background of its intervention in these proceedings. While the important facts now adduced are amply set forth in the Record, there is no mention of the State's situation either in the Federal Power Commission's opinion or in any of the various briefs of Commission counsel.

### A. The Position of the State of West Virginia.

"In no other field of public service regulation is the controlling body confronted with factors so baffling as in the natural gas industry", (*Pennsylvania* v. *West Virginia*, 262 U. S. 553, 621 (1923), *per* Brandeis, J., dissenting). The present litigation splendidly illustrates that dictum, at least to the extent that future exploitation of West Virginia's gas reserves depends upon their reasonable valuation in interstate markets. In fact, the ultimate issue here goes back twenty years or more, for the whole problem before this Court is simply the orderly development of these mineral resources in accordance with the needs of West Virginia. *Pennsylvania* v. *West Virginia* decided only that a producing state could not, by legislation, require preference to be accorded local consumers, and thereby withdraw a larger volume of gas from an established interstate current. Still the holding did not

in any way involve interstate price-fixing; nor did it go so far as to foreshadow a later attempt to jeopardize the State's economy by harsh undervaluation of operated leaseholds. The question now arises as to whether,—granted West Virginia's gas resources have thus been irrevocably dedicated to intertate commerce,—it is a fair implication from the *Pennsylvania* v. *West Virginia* theory that the producing state should have no voice whatsoever in their management.

The State of West Virginia does not attempt, in the present Brief as Amicus Curiae, merely to advocate the interests of a single producing company. It assumes, rather, that the litigation now before this Court will be determinative of the validity of the current administrative practices of the Federal Power Commission. Thereafter, the same measuring-rod, the same yardstick of valuation, can be applied to other gas operators in West Virginia; and the vital issues will have already been settled. In other words, the State of West Virginia appears here because the precedent which the *Hope* case will establish may become of grave import for the future. Exactly the same issues, the same argument, the same dangers will be met in numerous other proceedings involving West Virginia. In all of them there will be the identical questions,—namely, the position of the producing state in our federal system, and the valuation of mineral resources within the rule of *Pennsylvania* v. *West Virginia*.

This Court will note that the ultimate issue has to some extent been viewed in briefs of counsel for the respective petitioners,—and, indeed, by the opinion of the Commission itself,—as though it were a contest merely between the Standard Oil Company (New Jersey) and the householders of northeastern Ohio and western Pennsylvania. There is the suggestion that the case involves "dividends to Standard Oil"; and the past financial history of the

Standard Oil subsidiary, prior to the Natural Gas Act of 1938, is accordingly scrutinized. To such contentions the State of West Virginia has no reply to make. Whether or not the Standard Oil Company should be regarded as subject to the Public Utility Holding Company Act of 1935,—and analogous questions, are not before the Court in the present litigation. The State of West Virginia is concerned only with the fair valuation of its mineral resources, within the vast scope of the interstate commerce clause. Hence, the circumstance that one of the various operating companies, engaged in "the production or gathering of natural gas," is owned or controlled by Standard Oil is not only irrelevant here, but wholly immaterial. The State of West Virginia regrets that it has been necessary to advert to such allusions in briefs of counsel.

**B. Nature of the West Virginia Gas Industry.**

Something like half of the nation's total annual consumption of natural gas is presently transported in interstate commerce; and the problem of rate-making becomes a most important one, especially because such an interstate gas traffic (for the most part) denoted purely private business and not public-utility service prior to the 1938 federal law. The Brief for Petitioners, Federal Power Commission *et al.*, (page 78, footnote 37), apparently does not realize that the Hope Company was in no sense a common-law or statutory utility before 1938, (*Missouri* v. *Kansas Gas Co.*, 265 U. S. 298 (1924); *Public Utilities Comm.* v. *Landon*, 249 U. S. 236 [1919]). It also complicates matters that almost four-fifths of the whole national production goes for industrial purposes, with ordinary domestic uses playing a surprisingly minor role in its utilization (Brown, Ex. 19, 6). In other words, unlike the product of most public-service companies, there is actually an existing price for gas which is relatively independent of the customary sales to utility-patrons; and

that gas price had been established (prior to 1938) by trading at arm's length in competition with coal, coke, oil and other fuels.

Moreover, the Court will judicially note that natural gas companies furnish an irreplaceable commodity; a state's natural resources are seriously depleted in this kind of commerce. It is customary to compare the interstate development of gas deposits with the movement of timber, iron ore and other raw materials from mining states to manufacturing centers, (as in *Pennsylvania* v. *West Virginia*); but the essential present factor of price-control, under the Natural Gas Act, is then overlooked. Under normal conditions, there is no restraint on the interstate bargaining as to timber or solid minerals; a producing state's economy is not seriously threatened by outside rate-making. Indeed, the Guffey Act carefully took into account all these factors, so that ideals of conservation and investment-stability were linked up to the concept of consumer protection in bituminous coal price-fixing, (15 U. S. C., Sections 828 to 851). In the absence of such safeguards, interstate rate-making could, in the long run, entail the export of valuable natural resources at a sale-price less than the actual worth of the commodity at the point of origin. And *Pennsylvania* v. *West Virginia* might then lead, under statutory and administrative regulation, to ruthless exhaustion of local gas resources simply for the benefit of nearby industrial states,—a result unthinkable in our federal system.

In West Virginia, the gas-producing sands are continuously variable in thickness; and they are inclined to be lenticular in character, (—which is to say, shaped like a double-convex lens),—with porosity differences causing irregular areas of production. (Tollefson, Ex. 15.) Local geological prophecy is accordingly far less certain than in regions of the southwest, (Sisler and Tucker,

*Natural Gas in West Virginia*: contained in GEOLOGY OF NATURAL GAS, published by the American Association of Petroleum Geologists [1935]). There is widespread distribution over gently-sloping geological structures, without the concentrated pools on structural highs one finds in Texas or California fields. Erratic sand conditions naturally increases drilling hazards, though the existence of several producing-horizons somewhat balances the chances. But West Virginia leaseholds generally produce lower open-flow volume; in the present litigation, for example, the exhibits show that the 3300 Hope Company wells average only a relatively-small daily yield. Thus the delivery over longer periods of time sends up the overhead charges. The important geological factor in all this is that these gas pools are extremely limited in extent, and separated considerably by unproductive areas; and they occur (along anticlinal structures) on synclines, on the flanks of anticlines and on the crests. It is that very unpredictable quality which, more than anything else, creates so high a discovery value for producing leaseholds. Gas properties then appreciate more and more in value; and the appreciating process continues on indefinitely as the Appalachian fields decline in production. (Stephenson, *Valuation of Natural Gas Properties*, 1015-1016; contained in GEOLOGY OF NATURAL GAS, published by the American Association of Petroleum Geologists [1935]).

This Court has had before it, within the last decade or so, many important cases involving oil and gas production of the southwest, in all of which the issue of conservation of mineral resources was directly or indirectly involved. In no one of the series of these cases,—extending all the way from *Champlin Refining Co.* v. *Corp. Comm.*, (286 U. S. 210 [1932]), and *Sterling* v. *Constantin*, (287 U. S. 378 [1932]), down to *Federal Power Comm.* v. *Natural Gas Pipeline Co.*, (315 U. S. 575 [1943]), and

*Burford* v. *Sun Oil Co.*, (--- U. S. ---, 63 S. Ct. 1098, 87 L. Ed. 998 [1943]), was the question of acute shortage of mineral resources squarely presented. In contrast, the issue in the past has usually been over-production or waste: for example, *Thompson* v. *Consolidated Gas Utilities Corp.*, (300 U. S. 55 [1937]), revealed that during 1934 and 1935 a billion cubic feet of natural gas was being blown off into the air daily, in the West Texas gas field. (Over a year's time, more gas by far was thereby lost than now remains within the recoverable reserves of the Hope Company's operated acreage). But from these very cases involving such enormous waste, the impression is readily gained that the nation's gas reserves are inexhaustible or nearly so. Now, for the first time, gas litigation is being considered by this Court in which the problem is one of diminishing supply. The fate of the Indiana gas belt, (NATIONAL RESOURCES BOARD, REPORT ON NATIONAL PLANNING, Part IV., *Report of the Planning Committee for Mineral Policy*, 391-439, [1934]), may well prove to be the future in store for West Virginia. In any event, the State has already fallen from first place in national production, two decades ago, to fifth place during recent years. (In 1938, the West Virginia standing was sixth.)

Accordingly, both by reason of geological uncertainties and because of diminishing yield, West Virginia's gas deposits are becoming increasingly valuable. Among the factors to be considered here are the declining volume of output from old wells,—the lower delivering-capacity of new wells,—the increased cost of carrying reserve acreage for future operations,—and the overhead costs of conservation measures. It is impossible to believe that present undervaluation of operated leaseholds can increase the supply of gas available.

## C. Method of Gas Leasing in West Virginia.

It might be well to survey briefly methods of gas leasing in West Virginia, in order that various legal incidents of the gas leasehold may readily appear. (Tollefson, Ex. 23; Ex. 26.) Normally the Appalachian oil and gas operator will first select an area for prospecting work, assuming favorable structure and sand conditions; naturally the porosity and permeability of the producing formation cannot be accurately predicted by the geologist until drilling has made considerable data available. And from this angle, new gas supplies must always prove a risky speculation. Granted, however, a promising region has been chosen for prospecting, the process of securing mineral titles then gets under way. Taking into account the cost and uncertainty of buying the mineral rights in fee, the sounder policy of leasing them is ordinarily adopted here, the practice being to get together as large a block of leased acreages as practicable, before drilling a test well in unproven territory. To ensure retaining the benefit of favorable discovery, the operator must therefore acquire and hold thousands of acres during the exploratory period. Otherwise, successful drilling might simply prove territory controlled by others, so that neighboring leases in each direction would have to be bought up in competition with outsiders, and at prices reflecting the operator's own hazardous accomplishment. Yet if a series of dry holes indicates nonproductive land, those very leases will probably be surrendered, and their entire charges be written off as total loss along with the serious drilling expense. By and large, in the gas industry one thus meets with a constant cycle of surrendering old leases and taking up new ones as the effort to locate new reserves continuously persists.

All these areas, both producing and unoperated, are held under oil and gas leases which have usually been se-

cured for a nominal consideration. Under their provisions, the operator pays an annual delay rental—as a rule, a dollar an acre—as compensation for postpoing drilling; the so-called fixed term or exploratory period then runs for five or ten years, as the particular lease may provide. If within this term a producing well is successfully brought in, the extension clause ("as long thereafter as oil or gas is produced") next comes into play, and the lease continues indefinitely thereafter for the life of the field. In that event, the operator will pay the lessor a stipulated gas-well rental—ranging between two and three hundred dollars a year for each well from which gas is marketed—or, in the newer fields, the lessor will receive a gas royalty equivalent to one-eighth of the gas marketed. As the production gradually diminishes over the years, the operator nurses the old wells along until the rock pressure falls to the average abandonment minimum, and ultimately the operation is given up.

These details are essential to an understanding of the legal significance of the ordinary gas leasehold, which is simply the legal right of the operator to enter on the lessor's premises, to explore for gas, to "sever" the gas from the freehold by reducing it to possession, and to remove it from the premises. In other words, the gas lessee has a common-law *profit a prendre*, (of an exclusive nature), conveyed originally for a term of years and then on discovery extended for the life of the field. (Simonton, *The Nature of the Interest of the Grantee under an Oil and Gas Lease*, [1917] 25 W. Va. L. Q. 295.) In West Virginia, for example, the operator's interest is treated as a chattel real, which is to say, a *profit* for years rather than an incorporeal hereditament, subject as such to the lien of an execution and taxable presumably as Class IV personalty. (*State* v. *South Penn Oil Co.*, 42 W. Va. 80, 24 S. E. 688 [1896]; *Drainer* v. *Travis*, 116 W. Va. 390, 180 S. E. 435 [1935]). Analogously, the lessor's rent-receiv-

ing reversion in subsurface minerals has separate legal recognition, being valued for tax purposes at several times the annual gas rental or royalty *per* well, depending on the character of the producing field. In other words, both the grantor and grantee of the *profit* own important property interests; and those possess considerable present taxable value, quite apart from the original consideration for the lease and the development costs ensuing later. Between the parties, together they own the gas. All this would seem to be most elementary knowledge in oil and gas law, were it not for the alarming proposal now seriously offered, that the interstate consumers should "reap the advantage of the discovery value" of Appalachian gas leaseholds. Surely *Pennsylvania* v. *West Virginia* ought not to be carried so far.

A further word might be added, too, as regards the claim of the lessor, whose reversionary interest in the gas might be lost altogether if the small well were ultimately surrendered and plugged. Surely, as owner in fee of the gas, he should be represented in some way during the rate proceedings: it is his gas which is being severed and then transported in interstate commerce. Where his compensation is in the nature of a gas well rental for the producing *and paying* life of the field, that rent-receiving reversion ought to justify recognition in leasehold valuation. *A fortiori*, if the lessor under new leases has stipulated for an "eighth" gas royalty, the export price becomes a matter of even more vital concern to him. It is difficult to infer that the instrument of lease contemplated an eventual valuing of both *profit a prendre* and reversion on the basis of the book cost, comprising the original nominal consideration and the later development expense. In that event, the lessor would no doubt be surprised to find that he had absolutely no legal claim to any part of the "discovery value," under the policy of the Federal Power Commission.

## D. "The Rate Payers Reap the Advantage of the Discovery Value."

### 1. *The Policy of the Federal Power Commission.*

In the last analysis, the fundamental issue in the present litigation,—and the one in which the State of West Virginia has deep concern;—is the proper valuation of the gas *profit a prendre,* both as regards producing areas and the unoperated leaseholds prudently held in reserve for reasonably-anticipated market demand. In the course of the Brief of Commission Counsel at the hearings before the Federal Power Commission, (p. 211), the ordinary practice in the gas industry was summed up in these terms:

> "When undeveloped acreage is proved nonproductive, its cost, the cost of drilling and delay rentals, are worthless. If proved productive, however, it suddenly acquires great intrinsic value as a gas-producing acreage. The inclusion of this enhanced value on productive acreage in the rate base, with the depletion expense computed upon such value and allowed in operating expenses, provides for all losses in connection with exploration and development and provides a fund to obtain additional developed gas acreage to replenish the gas supply."

Nevertheless, for the valuation of West Virginia gas reserves, Commission Counsel has advocated, (pp. 211-212), and the Federal Power Commission has adopted quite a different plan. In the discussion of depletion charges, the following rule was proposed by Commission Counsel, (and ultimately approved by the Commission):

> "When gas producing acreage is priced at original cost, there is no enhancement of the depletion expense allowance to cover the costs of explora-

> tion and development. The rate payers, therefore, reap the advantage of the discovery value. • • • (Counsel) has recommended that the original cost of producing leases be included in the rate base, in contradistinction from the 'market value' of producing leases."

In view of the confusing terminology of Commission Counsel, a word of explanation might be added here. The term "rate payer" has definite significance both in dictionary-meaning and in legislative use: it is the specific term commonly-employed in England to denote taxpayer.[1] A rate payer is thus one who pays the local (tax) rates. So far as the present case goes, the consumers of northeastern Ohio and western Pennsylvania are in no sense West Virginia rate payers (or taxpayers). The great consumer-industries in these adjoining states contribute absolutely nothing, by way of direct taxation, to the support of West Virginia schools and other essential governmental services. Accordingly, the correct legal statement of the decision of the Federal Power Commission is simply that the (West Virginia) rate payers *lose* "the advantage of the discovery value" (of West Virginia gas reserves). To put it briefly, the out-of-state users gain, while local taxpayers are deprived of the benefit of the fair value of these wasting assets.

In other words, if the operated territory proves productive, the operator is then allowed in his rate-base merely the nominal cost of original acquisition of those acres under which the gas was later found by testing, along with the actual expense of drilling the wells. There is no *discovery-value* for either lessor or lessee: apparently the gas at once belongs to the interstate customer, sub-

[1]Yet Commission Counsel continuously becloud the issue by its improper use. For example, the Brief of Petitioners, (page 18), argues that "well-drilling expenditures had been contemporaneously recovered through revenues from the rate payers."

ject only to the payment of transportation charges and a reasonable return on the diminutive rate-base of nominal costs and drilling expense. No doubt it might be seriously contended that the operator is amply safeguarded against financial loss by including within the category of operating expenses (1) delay rentals on undeveloped leaseholds, (2) dry-hole losses, (3) disbursements for nonproductive acreage that is abandoned and (4) the other exploration costs. Thus, one can say, the utility has obtained a fair return on the actual-cost basis. As regards the gas properties themselves, the same argument would assume that the consumers have in the past bought a substantial equity in these particular holdings, simply by paying prices that included delay rentals and drilling costs. The fundamental fallacy in it all is the complete failure to consider the reversionary interest of the lessor or the economy of the producing state, not to mention the arbitrary and retroactive policy of viewing the *profit a prendre* on the basis of an investment of decades before, rather than according to its fair value in 1938. And until this Court has ruled otherwise, the State of West Virginia will contend that its natural gas resources as of the year 1938, (theretofore owned by private interstate industry), were being regulated by Congress on today's basis.

2. *Administrative Valuation of Natural Gas Leaseholds.*

So the Commission's order has raised the vital question in this litigation as to how *low* West Virginia leasehold values can be fixed within the limits of the Constitution, in order that interstate domestic and industrial consumers may pay less for the rapidly-diminishing supply of natural fuel. Naturally, it would merely be arguing in a circle to assert that the operator's *profit a prendre* is worth no more than the capitalization of net income from

whatever gas rates may ultimately be established by the Federal Power Commission. The whole difficulty is, what are the proper rates: and the Natural Gas Act specifically empowers the Commission to determine "fair value" in making up the rate-base. One must accordingly start with the valuing of gas properties, before even considering the important collateral issues of operating expenses and rate of return. And any alleged monopolistic character of natural gas, according to Justice Cardozo, may be wholly ignored, (*West Ohio Gas Co.* v. *Public Utilities Comm.*, 294 U. S. 63, 72 [1935]):

> "The suggestion is made that there is no evidence of competition. We take judicial notice of the fact that gas is in competition with other forms of fuel, such as oil or electricity."

If one may properly infer from the very silence of the Natural Gas Act that the method of valuing gas *profits a prendre* is still open, the prior administrative and judicial practice in the task of intrastate rate-making should then be studied. It would be convenient to separate the case-law into two periods, marking the division by the United States Supreme Court's ruling in *United Fuel Gas Co.* v. *Railroad Comm. of Ky.*, (278 U. S. 300 [1929]), a dozen years ago. Originally, in the earlier stage, there was considerable uncertainty among commissions and courts as to how to tackle the issue. Gradually, "present fair value" became the approved test in West Virginia,[2] Pennsylvania,[3] Ohio[4] and New York.[5]

The legal history of leasehold valuation within the Appalachian territory was mirrored in case-law from the

[2] *City of Charleston* v. *Public Service Comm.*, 95 W. Va. 91, 120 S. E. 398 (1923), syl. 2.

[3] *City of Erie* v. *Pennsylvania Gas Co.*, 278 Pa. 512, 528, 123 Atl. 471, P. U. R. 1924D 89 (1924).

[4] *Logan Gas Company* v. *Public Utilities Comm.*, 124 Ohio St. 243, 177 N. E. 587 (1931).

[5] *Pennsylvania Gas Co.* v. *Public Service Comm.*, 207 N. Y. Supp. 599 (1925).

mid-continent field. All the old rulings,—for and against capitalization or for and against present value,—were reviewed in decisions by Oklahoma,[6] Kansas[7] and Montana[8] commissions and courts. The upshot of it all was the approval of an administrative process of valuing gas rights on some basis of present worth, so that the national picture was uniform: up to a dozen years ago, there was very little doubt as to the proper solution.[9]

*United Fuel Gas Co. v. Railroad Comm. of Ky.*, (278 U. S. 300 [1929]), involved valuation of gas rights covering a total of more than eight hundred thousand acres, a relatively small part of which was held in fee. Geological and engineering experts had computed an estimate of the total volume of gas underlying the proven and probable territory. These calculations had been supplemented by testimony that in Pittsburgh there was an unregulated market for industrial gas, which could always be maintained in competition with coal and coal products. Other experts

[6]*Re Pawhuska Oil & Gas Co.*, P. U. R. 1917D 947 (1917); *American Indian Oil & Gas Co. v. Poteau*, 108 Okla. 215, 235 Pac. 906 (1925).

[7]*Landon v. Lawrence*, P. U. R. 1916B 331 (1916); *Landon v. Public Utilities Comm.*, 242 Fed. 658, P. U. R. 1918A 31 (D. C. Kan. 1917).

[8]*Re Baker Natural Gas Utility*, P. U. R. (1921E 609, 622 1921); *Public Service Comm. v. Montana Petroleum Co.*, P. U. R. 1923B 364.

[9]To be sure, the West Virginia Supreme Court of Appeals held, (*Natural Gas Co. v. Public Service Comm.*, 95 W. Va. 557, 121 S. E. 716 [1924], syl. 6), that the total of the delay rentals paid had to be taken into account for any survey of appreciation in lease values; yet that judicial result can be understood, even though it seems doubtful. Possibly there was the intuitive thought of achieving lower rates in the regulated West Virginia market for the West Virginia consumers of an exhaustible West Virginia natural resource, as against higher prices in the unregulated sales outside the state. This would seem to be an extremely broad extension of the custom of the lessor's free gas covenant, so as to amount to a "cheap gas covenant" in favor of local consumers; yet in substance that is what the delay-rental holding might accomplish. By keeping down the rate-base through a discount of leasehold appreciation, it is not far-fetched to suggest the West Virginia theory effectively protected domestic consumers. Perhaps it merely illustrated a latent effort to circumvent *Pennsylvania v. West Virginia*: granted West Virginia consumers could not have priority as a matter of state legislation, they might at least have more favorable prices for the local product as a matter of judicial decision.

familiar with the production and marketing side had given opinions also based on an assumed gas supply available for unregulated sale at predictable prices. On the other hand, only about a sixth of the entire acreage was proven territory. After characterizing the proof offered as "wanting in probative force," the Court held:

> "On the record as made, appellants have failed to present any convincing evidence of value of their gas field which would enable us to assign to it any greater value than that which they appear to have assigned to it on their books. This book value, therefore, may be accepted, not as evidence of the real value of the gas field, but as an assumed value named by the appellants, which on the evidence presented cannot reasonably be fixed at any higher figure." (278 U. S. 300, 318.)

Accordingly, since the burden of proving the value in a confiscation case rested on the utility, and had to be "supported by clear and convincing evidence," the action of the lower federal court in denying an injunction against the commission rate-making was unanimously affirmed. It must be borne in mind, however, that the company had roughly but seventy thousand operated acres,—with more than ten times that much unoperated,—and it was allowed by the Court to include the latter in its rate-base and their delay rentals in operating expenses. This decision was thus conclusively significant for several reasons. In the first place, the issue as to capitalization was definitely settled, in the affirmative; the value of leasehold had to be taken into account in natural gas regulation. Next, precise evidence was essential in the establishment of the valuation claimed, for the testimony as to a computed value for gas reserves in the ground based on geological estimates and predicted future prices could not be accepted. Nevertheless, the inference was left that had market value been proven, by adequate sales and purchases

of leases, its adoption would have been approved. Finally, reasonable accumulations of undeveloped acreage might be sustained, where the operator's business required such prudence and foresight.

With the *United Fuel Gas* case, a new chapter began in leasehold valuation. Litigation was henceforth to turn on the adequacy of the proof offered by the operator in support of its position as to present fair value. To be sure, in *Los Angeles Gas & Electric Corp.* v. *Railroad Comm. of Cal.*, (289 U. S. 287, 305 [1933]), the Chief Justice observed as to public utility properties that "the criteria at hand for ascertaining market value, or what is called exchange value, are not commonly available." Still in subsequent rate cases, efforts were diligently made to produce the "clear and convincing evidence" required. *Dayton Power & Light Co.* v. *Public Utilities Comm.*, (292 U. S. 290 [1934]), brought the problem to the Supreme Court once more. In addition to the customary forecasts of production capacity in an unregulated market, there were now instances of actual sales of other leaseholds in sporadic transactions, at disparate prices. The Ohio Commission had actually valued producing acreage at twenty-five dollars an acre, following the precedent of the *Logan* case and disregarding book cost. It was held without dissent that the burden of proof as to confiscation on the basis of the old rates had not been sustained. Recent state cases have tended, moreover, to some sort of present value for gas properties.

The direct issue of leasehold valuation has not again reached the Supreme Court, although the recent decision in the *Natural Gas Pipeline* case is indicative of the Court's interest in the subject. Chief Justice Stone, who wrote the opinion in *United Fuel Gas Co.* v. *Railroad Comm.*, again spoke for the majority; and specifically observed that the Federal Power Commission had here

taken the operator's statement as to the present value of the gas reserves. On the whole, the language of the Court perhaps seems to approve the Commission's action:

> "And the allowed 'present value' of leases as of June 1, 1939, $13,334,775, is approximately $4,000,000 more than book cost, even without taking into account a substantial reduction for depletion services of $1,152,854, which the companies had accrued on their own books by the end of 1938." (62 S. Ct. 736, 744, 86 L. Ed. 699 [1942]).

Nothing was said about undeveloped acreage, nor was there any court reference to the inclusion of delay rentals in some rate-making category.

Sifting down all the case-law for both the periods before and after 1929, certain propositions seem clearly established. In the first place, no court of last resort has refused to capitalized gas leaseholds, although the precise method of capitalization still remains open. Secondly, it has not been held as a matter of federal constitutional law that leases *must* be valued merely at book cost. Thirdly, unoperated territory ought not to be capitalized until there is "present or immediate need" for its use. Fourthly, unusual proof by "clear and convincing evidence" is requisite to support the claim of market valuation. And, finally, delay rentals on reasonable quantities of unoperated leaseholds can be included within operating expenses, (unless the amortization charge be adequate to carry them). It is to be noted, however, that the reversionary interest of the grantor of the gas *profit à prendre*, as well as the economy of the producing state, has scarcely received adequate judicial recognition as yet.

3. *Leasehold Valuation and the Producing State.*

The gravity of the issue before the Court amply justifies this extended discussion of gas-leasehold valuation.

As a matter of West Virginia law, gas reserves are presently valued by the Public Service Commission at their real worth, with certain deductions; if the proposed variant of original cost (adopted by the Federal Power Commission) were to be finally upheld, there would then be two different methods of valuation flourishing simultaneously, side by side. For all intrastate utility service, market value would be the legal standard: but for the interstate gas traffic, something less than out-of-pocket expenditure would control as to leasehold and reversionary interests of producers and farmers alike, in the export of West Virginia's mineral wealth. That result would call up the shadowy ghost of *Swift* v. *Tyson*, (16 Pet. 1 [1842]; see *Note* [1940], *Oil and Gas Law in the Federal Court*, 46 W. Va. L. Quart. 154), to serve as the governing factor in interstate gas-property valuation.

Nevertheless, wholly apart from all these various questions, the paramount consideration now before the Court is the situs of the ownership of the "discovery value," as between the producing state and the distant consumers. An ordinary example will suffice here. Assume there is a block of new operated leaseholds, (with satisfactory rock-pressure), the development of which has cost the operator the following sums:

| | |
|---|---|
| Nominal consideration | $ 20.00 |
| Delay rentals | 1,000.00 |
| Drilling expense:[10] | |
| 30 producing wells at $7,000 per well | 210,000.00 |
| Total cost | $211,020.00 |

In all probability, the minimum present worth of these new leaseholds, with their producing wells, would be (in

[10] Arnold and Kemmitzer, *Petroleum in the United States*, 169 (1931).

normal times) in excess of a half-million dollars. Thus, the "discovery value" of such leases might amount to hundreds of thousands of dollars. The Federal Power Commission has decided that "discovery value" belongs to domestic and industrial users in adjoining states: it is no longer, at least for interstate rate-making purposes, the property of West Virginia and West Virginia operators. To put the issue more succinctly,—West Virginia producers have in the past exported their gas to Ohio and Pennsylvania; and the Commission has now sought analogously to export across the state-line the "discovery value" of West Virginia gas-leaseholds. It is ridiculously absurd to suggest that so important a value ought not to be included within the reckoning of West Virginia's mineral wealth.

Accordingly, the State of West Virginia has been obliged to intervene in these proceedings, simply in order to protect and safeguard its natural resources against arbitrary administrative action. This Court has the serious responsibility of adjusting interstate relations, so as to promote commerce in natural gas among the states in accordance with the mandate of Congress. Still the precedent of *Pennsylvania* v. *West Virginia* does not compel the surrender of "discovery value" to out-of-state consumers,—nor does the Constitution contemplate so severe an injury to the producing state. Yet the Federal Power Commission has refused even to consider the protests of West Virginia against such spoliation.

## ARGUMENT

### I

### The State of West Virginia, as Amicus Curiae, May Urge the Importance of a Fair Valuation of Its Natural Gas Reserves in the Economy and Well-being of the State.

A. The State Has a Direct Sovereign Interest in Governmental Revenues from its Natural Gas Industry.

This Court has in the past recognized the interest of the State in taxes from its oil and gas industry. In *Burford v. Sun Oil Company*, (--- U. S. ---, 63 S. Ct. 1098, 1100, 87 L. Ed. 999, 1001-1002, 1007 [1943], *per* Black, J.), the Court said:

> "Texas interests in this matter are more than that very large one of conserving gas and oil, two of our most important natural resources. It must also weigh the impact of the industry on the whole economy of the state and must consider its revenue, much of which is drawn from taxes on the industry and from mineral lands preserved for the benefit of its education and eleemosynary institutions.[10]"

Footnote: [10] "The problem of gaining an adequate revenue from the petroleum industry was particularly serious in Texas during the period 1930-35. The question was discussed by Governor Sterling in messages to the legislature in 1931, 1932, and 1933, and by Governor Allred in 1935. See The Texas Senate Journal, Jan. 13-May 23, 1931, p. 526; ibid, July-August, 1931, p. 594; ibid, September-October, 1931, p. 164; ibid, August-September, 1932, p. 60; ibid, Reg. Sess. 1933, pp. 587, 589, 590."

Footnote. [28] "The special session of July and August, 1931, was in session when MacMillan v.

Railroad Commission was decided, and, as has been noted above, the MacMillan Case provided the special session with the bulk of its business. People's Petroleum Producers v. Smith (DC) 1 F Supp 361 was the cause of the special session of November, 1932. In his introductory message to the special session, Governor Sterling said: 'Most assuredly, I would not, at this time, have called you into extraordinary session except I believe a grave crisis again confronts the State and our people on account of the Federal Court having held that the Railroad Commission has gone beyond the authority given in this statute enacted at that time in promulgating their orders as to proration and conservation of oil and gas * * * It is apparent that (as a result of the decision) the state's greatest natural resource—oil and gas—will be wasted and destroyed, resulting in a tremendous financial injury to the state, especially to the taxpayers and the public schools. It is apparent that under such conditions, the state's income, as a result of the gross production tax on oil, will be reduced from approximately $16,000 a day to a few thousand dollars per day; thus depriving the State of a tremendous amount of revenue.' Texas Senate Journal, Nov. 1932, pp. 3, 4."

There is little doubt in the present litigation that the Hope Natural Gas Company will effect a very considerable saving in West Virginia property taxes, as a result of the ordered rate reduction.[11] Certainly, the reduced tax-valuation which unfortunately becomes inevitable, (when the Federal Power Commission fixed the rate-base at roughly $33,000,000., as compared with the pres-

[11]The Hope Company has represented to the Commission that it expects to save $338,000 annually, in West Virginia property taxes, (Brief for Petitioners, Federal Power Commission *et al.*, p. 32).

ent Board of Public Works tax-base of almost $53,000,000,), will affect property taxes in most of the counties of the State.[12]

---

[12] According to the printed Report of the State Tax Commissioner, 1937-1938 and 1939-1940, (pp. 1059 and 1054, respectively), the assessment of the Hope Company by counties is as follows:

| | 1936 | 1937 | 1938 | 1939 |
|---|---|---|---|---|

According to Chapter 11, Article 6, Section 11 of the Revised Code of West Virginia, the Board of Public Works has the duty of assessing and fixing the true and actual value of all public-utility property. The West Virginia Supreme Court of Appeals has said that the income producing capacity of property is an important factor, (*West Penn Power Co.* v. *Board of Review and Equalization*, 112 W. Va. 442 [1932]). In the face of this statute, and of the Court's interpretation, it would be impossible for the West Virginia Board of Public Works to ignore the effect of an order of the Federal Power Commission which might have the effect of limiting the company's annual net earnings to approximately $2,000,000. If this Court should find that a 6½% return is as low a rate as is fair, it would be very difficult also for the Board of Public Works to contend that the Hope Company's net earnings of $2,000,000 could be capitalized at roughly $53,000,000., present valuation.

The Hope Natural Gas Company is also subject to a business or occupation tax, measured by the value of the gas produced by its operated wells. Under Sections 2a and 3a of this production-tax law (West Virginia Revised Code, Chapter 11, Article 13, Sections 2a and 3a), the levy of the tax is fixed at 7.8% of the gross proceeds from sale of the entire production in the State, regardless of the place of sale or the fact that delivery may be made outside the State. Under Section 1 of the same statute, gross "proceeds of sale" are defined as "the value actually received from the sale of tangible property without any deduction on account of the cost of property sold or expense of any kind." In Section 2, provision is made for determining the value of products transported out of the State; and the tax commissioner of the State is directed to prescribe uniform rules for

ascertaining such value. In measuring value by the gross proceeds derived from their sale, the State has recognized, and has given full effect to the various factors of time, place and conditions influencing the marketing of natural resources. Taxable value thus becomes practically the substantial equivalent of market value.

Exhibit 67, Schedule 8 (Sheets 1, 2 and 3), shows the gross sales and production taxes paid by Hope on both intrastate and export sales during the years 1937, 1938 and 1939. The record does not show what production in m. c. f. for each year was used by the State in determining the value of the gas at well: consequently it is not possible to ascertain the precise m. c. f. value. Nevertheless, production figures for those years appearing in the record indicate that the value, thus ascertained by the State, was *at least 16¢ per m. c. f.* Such official determination of well-mouth value by state authorities is entitled to great weight as evidence. On the other hand, if the value of the Hope properties as estimated by the interstate rate-base is to be reduced by almost two-fifths, then obviously the well-mouth value must similarly be reduced. Granted the unit value of the product is thereby depreciated, the production tax yield must be seriously affected.[12a] Undervaluation of the Hope gas lease-holds must thus cost the State of West Virginia hundreds of thousands of dollars in production taxes.[13]

---

[12a] Perhaps a minimum estimate of the loss to the State in production taxes might be set forth here. The Federal Power Commission reduced the amount available to the Hope Company for its supply of natural gas by $3,600,000., approximately. Since the tax of 7.8% is based on "the gross proceeds derived from the sale thereof by the producer," (Code of West Virginia, Ch. 11, Art. 13, Sec. 2a), the fall in tax revenue is easily calculated by applying the percentage rate to the reduction in gross income to the Company. The resulting figure of $280,800. represents the immediate cost to West Virginia in production taxes, at the very minimum.

[13] The importance of the production-tax yield to West Virginia can be seen from the following table. (Report of State Tax Commissioner, 1937-1938 and 1939-1940):

The State of West Virginia may now urge before this Court the paramount necessity of the maintenance of its governmental revenues. No arbitrary depreciation of the State's natural resources should be permitted, when the immediate effect of such undervaluation is to cripple the school system and other essential services of the State. The adjustment of the several states within the federal framework of the Constitution surely did not contemplate the impairment of a producing state's tax structure, purely for the benefit of consumers in adjoining industrial states.

The State of West Virginia does not expressly advocate either the prudent-investment or the reproduction-value doctrine in these proceedings; nor does the State urge the approval by this Court of any particular theory of accountancy. The issue is a far graver one. In the adjustment of the several states within the edifice of our federal system, how far may a federal commission regulate the fundamental economy of a producing state?

---

| 1940 | $ 6,646.00 |

B. The State Has Likewise a Governmental Interest in the Conservation of Its Natural Resources.

This Court has similarly in the past recognized the interest of the State in the conservation of its natural resources. In *Railroad Commission* v. *Rowan & Nichols Oil Co.*, (310 U. S. 573, 582 [1940], *per* Frankfurter, J.), the Court said:

> "If these wells, most of them small, were restricted to production on the basis of an hourly potential formula, it might be unprofitable to operate them at all. Not only are the individual interests of these small operators involved, but *their effect upon the state's economy is an appropriate factor to be taken into account when plans are devised to keep the wells open.*" (Italics ours.)

That dictum simply reflected the long-continued interest of the Court in matters of state conservation. Starting with *Ohio Oil Company* v. *Indiana*, (177 U. S. 190 [1900]), and continuing on down through *Champlin Refining Co.* v. *Corp. Comm.*, (286 U. S. 210 [1932]), to *Patterson* v. *Stanolind Oil and Gas Co.*, (305 U. S. 376 [1939]), the decisions have consistently favored reasonable statutory and administrative conservation efforts.

The State may now, therefore, represent to this Court how seriously conservation policies will be jeopardized through the present endeavors of the Federal Power Commission to reduce West Virginia leasehold values to a modified "original cost" basis. In three respects at least, the State will suffer:

1. Exploratory development of new fields will be discouraged. Unless the operator profits by the "discovery value" of his new producing lease-

holds, there will be little inducement to undertake "wildcatting" in unproved territory. After all, one well in every five drilled in West Virginia turns out to be a "dry hole";[14] and allocation of the cost of "dry holes" is one of the very issues in the present litigation. With West Virginia's known gas reserves fast diminishing, it is imperative that "wildcat" operations be maintained and encouraged, without penalizing successful development by immediate transfer of its "discovery value" to out-of-state domestic and industrial users.

2. Abandonment of low-yield high-cost marginal wells will be hastened.[15] In the main, the same overhead charges will continue as to smaller producers, regardless of the leasehold valuation. If the leases be undervalued, the net revenue from these older operations will scarcely justify their upkeep. By and large, such wells will then be surrendered far sooner than under existing operating practice. And once a well has been given up and plugged, underlying gas reserves may be lost forever.

3. Secondary recovery of oil,[16] now being undertaken extensively throughout the Appalachian field, will be seriously hampered by arbitrary de-

[14]Tucker, *Future Oil & Gas Supply in Eastern United States*, AMERICAN PETROLEUM INSTITUTE, Minutes of Pittsburgh Meeting, (1943).

[15]As a practical operating decision, Hope abandons wells when the rock pressure reaches 30# in all sands, except the Speechley and the Benson; and 100# in the latter sands. (Exhibit No. 15, p. 15 and R. p. 1053). This decision necessarily depends, in part at least, upon the price received for gas. If that price is reduced, the abandoning pressure will be raised, whereby the rate of well abandonment will be increased.

[16]*Secondary Recovery of Oil in the United States*, AMERICAN PETROLEUM INSTITUTE (1942); *Note* (1942), 49 W. Va. L. Quart. p. 66.

valuation of oil and gas leaseholds. If fugacious minerals are to be undervalued, there is no longer the same incentive to go on with exploratory research in secondary-recovery methods.

Quite apart from these factors, all conservation measures cost money; and when more and more of these measures are utilized, as the gas fields become older, the cost of gas is increased. Decreased leasehold valuation tends to keep such efforts at a minimum; for, after all, the "discovery value" belongs to others. The State has a direct governmental interest in averting such inevitable injury to its natural resources.[17]

C. The State May Intervene to Protect the Interests of Its Citizens Under the Parens Patriae Doctrine, and by Virtue of the Natural Gas Act.

It has been held many times by this Court that, in matters of grave public concern, the State, as representative of its public, has an interest apart from that of the individuals affected. Accordingly, as *perens patriae*, the State may sue to vindicate that public interest, and may uphold the rights of its citizens as against out-of-state wrongdoers. (See, *Missouri* v. *Illinois*, 180 U. S. 208, 241 [1901]; *Kansas* v. *Colorado*, 185 U. S. 125, 142 [1902]; *Georgia* v. *Tennessee Copper Co.*, 206 U. S. 230 [1907]; *New York* v. *New Jersey*, 256 U. S. 296 [1921]; *Wyoming* v. *Colorado*, 259 U. S. 419, 464 [1922]; *Pennsylvania* v. *West Virginia*, 262 U. S. 553 [1923]; *North Dakota* v.

[17] The Federal Power Commission apparently believes the conservation problem is not a serious one. For example, the *Brief for Petitioners*, (p. 76), refers to the change of accounting methods in this language:

> "* * * This change in accounting also recognized the progress then being made in gas and oil exploration and in drilling methods, which was bringing about the discovery of huge resources formerly unknown and unavailable and thus was removing the fear of rapid decrease in supply—the raison d'etre of the former accounting procedure."

*Minnesota*, 263 U. S. 365, 374 [1923]; *Wisconsin* v. *Illinois*, 278 U. S. 367, 409 [1929]; *Kentucky* v. *Indiana*, 281 U. S. 163 [1930]).

There is language in the opinion of *Massachusetts* v. *Mellon*, (262 U. S. 447 [1923]), which might cast doubt upon this general proposition. Holding that a state could not enjoin enforcement of an appropriation act of Congress, Justice Sutherland remarked that a state might not, as *parens patriae*, "institute judicial proceedings to protect citizens of the United States from the operation of the statutes thereof." While no going so far as to say that a state could *never* intervene by suit to protect its citizens against any form of enforcement of unconstitutional acts of Congress, the Court was clear that the right on the part of the state to protest did not arise in the instance of this federal appropriation act. (See, also, *Florida* v. *Mellon*, 273 U. S. 12 [1927]). On the other hand, *Hopkins Federal Savings & Loan Association* v. *Cleary*, 296 U. S. 315 (1935), limited the scope of the *Massachusetts* v. *Mellon* decision. In the course of his opinion, Justice Cardozo said (at page 340):

> "In its capacity of quasi-sovereign, the state repulses an assault upon the quasi-public institutions that are the product and embodiment of its statutes and its policy. Finding them about to deviate from the law of their creation, it is met by the excuse that everything done or purposed is permitted by an Act of Congress. The excuse is inadequate unless the power to give absolution for overstepping such restrictions has been surrendered by the state to the Government in Washington."[15] 80 L. Ed. 261.

[15] Justice Cardozo then added,

"The standing of Wisconsin to resist a trespass on its powers is confirmed if we view the subject from another angle of approach. In the creation of corporations of this quasi-public order and in keeping them thereafter within the limits of their

In other words, the mere fact that the proposed transfer of the "discovery value" of West Virginia's gas deposits over to consumers in adjoining industrial states is permitted by an Act of Congress is wholly inadequate as regards the right of the State to protest against such deliberate spoliation. The natural-gas public utilities of the State must not depart from the duty owed to the citizens of West Virginia.

Nevertheless, without regard to the *parens patriae* doctrine, the Natural Gas Act of 1938 specifically recognizes the interest of the state in the regulation of natural gas undertaken by the Federal Power Commission. Over and over again, the provisions of this statute expressly authorize intervention by the state, or by the political subdivision most directly concerned. (See, for example, 15 U. S. C., Sections 717c[e], 717d, 717j, 717l, 717p, and 717r.) Thus, the Act of Congress has itself definitely recognized in this instance the right of the state to participate on behalf of its citizens. The present brief, as *Amicus Curiae*, now sets forth the grave concern of the State of West Virginia, lest irrevocable harm be done its citizens through the Commission's arbitrary undervaluation of the State's natural resources.

1. *The State of West Virginia, in Common with All States Whose Economy Is Based on the Development of Natural Resources, Is Vitally Interested in the Orderly Marketing of Its Mineral Wealth, so that the True Value of These Minerals May Be*

---

charters, the state is parens patriae, acting in a spirit of benevolence for the welfare of its citizens. Shareholders and creditors have assumed a relation to the business in the belief that the assets will be protected by all the power of the government against use for other ends than those stated in the charter. Aside from the direct interest of the state in the preservation of agencies established for the common good, there is thus the duty of the parens patriae to keep faith with those who have put their trust in the parental power. * * *"

*Returned to the State's Total Resources, as the Wasting Assets Become Exhausted.*

The State of West Virginia, as *parens patriae*, is interested in ensuring for its citizens the orderly marketing of its mineral resources. (See *Railroad Commission* v. *Rowan & Nichols Oil Co.*, 310 U. S. 573 [1940]). In short, the State may now intervene on behalf of its people, in order to avert the serious consequence of a grossly unfair undervaluation of its natural gas resources by the Federal Power Commission. This litigation directly concerns one of the great industries of the State; and its importance is such that any harm to the industry must inevitably affect the welfare of a very large group of its citizenry.

Perhaps the effect of the undervaluation of West Virginia's gas deposits might be indicated in terms of the well-mouth gas prices. Exhibit No. 49 represents an analysis of natural gas purchased and prices paid during the three-year period 1937-1939, by the twelve largest utilities operating in West Virginia. The record shows that the price paid for gas varies, according to the county and section of the State; for example, Exhibit 79 (Table V) shows gas purchased by South Penn Natural Gas Company in Boone and Kanawha Counties, in the southern part of the State, was priced at approximately twelve cents per m. c. f. On the other hand, in the central and northern parts of the State, gas was bought by South Penn at prices ranging from seventeen cents to twenty-two cents per m. c. f. In any event, purchases made by other companies, not connected with the Hope System, occurred at an average price of fifteen cents per m. c. f. It is not unreasonable, therefore, to assume that the well-mouth market-value of gas produced in the Hope territory was in the neighborhood of *fifteen cents per m. c. f.*, as of 1938, when the Natural Gas Act became effective.

In contrast to the foregoing, a further analysis has been made to determine *the exact part of the total income* under the rates set by the Federal Power Commission order, which might become available to cover the well-mouth price of the gas produced by the Hope wells, after paying all expenses other than well-expense. (This analysis is printed in Appendix I, to the present Brief). In order to ascertain that well-mouth price, all items of operating revenue and deductions have been carefully segregated (other than those specifically applicable to well-head or well-mouth production). On completion of such analysis and segregation of items, the remaining revenue left to cover the well-mouth price for producing natural gas is set forth by the following summary:

| | |
|---|---|
| Other Production Expenses (Col. 5) | $ 967,929 |
| Gas Purchased Expense (Col. 7) | 7,379,437 |
| Transmission Expense (Col. 8) | 4,080,598 |
| Total Expense for other than Gas Produced | $12,686,898 |
| Amount Allowed for Gas Produced | 3,258,934 |
| Total of Recommended Gross Revenue per page 54 of Opinion | $15,686,898 |

Continuing with this summation of well-mouth price-estimates, an analysis of Exhibit 69A shows that the volume of gas produced by the Hope-owned wells in 1940 was, in round figures, about twenty-seven million m. c. f. The allowance of $3,258,898 by the Federal Power Commission for Hope-produced gas, at the well-mouth, is therefore *about twelve cents per m. c. f.* If even as little as one-half of the delay rentals be transferred to general or other expense, the well-mouth allowance is reduced to approximately *ten cents per m. c. f.*; should any adjustment be made for federal income taxes or reclassification

and rate-case expenses, the allowed well-mouth price will be even further reduced. In short, these analyses conclusively establish that the recommended reduction in rates will result in a well-mouth price for Hope-produced gas which is *from three to five cents per m. c. f. less than the going-market price*. Hope gas is to be valued by the Federal Power Commission at ten or twelve cents per m. c. f.: open-market purchases of gas in the Hope territory have occurred at an average price of fifteen cents per m. c. f., hence, were the Federal Power Commission order now to be sustained, Hope would be compelled to sell its product at a price less than the cost of gas in producing regions.

Serious as the Federal Power Commission's order may be in thus reducing gas prices below cost, the City of Cleveland's proposal is even more disastrous for the gas industry. It was contended by counsel for the City of Cleveland, in the reply brief before the Federal Power Commission, that rates should be fixed which would net the Hope Company only 3.64¢ per m. c. f., for some ten million-odd m. c. f. of gas to be consumed. In other words, it is thus the position of the City that gas should be delivered to Ohio consumers *at less than one-fourth of its actual value* in West Virginia. Surely the very nature of this proposal indicates the background of the decision by the Federal Power Commission.[19]

2. *The State of West Virginia Must Be Assured that a Reasonable Price Will Be Fixed for the Interstate Gas Traffic, in Order that the Values of Other Competing Natural Fuels Produced Within the State May Be Properly Safeguarded.*

An equally important consideration here concerns the competition of natural gas in the open market with coal,

[19]The proposal of the City of Cleveland in this regard has been set forth in detail in Appendix II to this Brief.

oil and other fuels. Of course, natural gas does not enjoy a monopoly like electricity or water, for which there are no practicable substitutes. But consumer-demand for gas is substantially voluntary; if the price be too high, consumers can, and do, shift to other forms of fuel. Indeed, such a change from gas to coal was actually recommended by the Commission's engineer, (R. pp. 4439-4444), for the Hastings Compressor Station of the Hope Company. Yet the converse is also true. If natural gas be materially cheapened, consumers will turn to that fuel in preference to coal or oil. In consequence, an arbitrary and unfair undervaluation of natural gas will have the effect in West Virginia, in the long run, of depreciating further the price of West Virginia coal and oil. If there were no other reason to be furnished here, the very circumstance that West Virginia's competing fuel industries would be injured by such confiscatory administrative action as to its natural gas might amply justify the State in intervening on behalf of its citizens. (See, as to the nature of the competition between natural gas and the coal industry, *Brief on Behalf of Legislation Imposing an Excise Tax on Natural Gas*, (1934), submitted to the Division of Economic Research and Planning of NRA, by the National Coal Association and the United Mine Workers of America).

3. *The State of West Virginia May Insist that the Prices Now Fixed for Natural Gas Will Protect and Conserve the Supply of Its Various Constituent Hydrocarbons for Future Demands of the Chemical Industry.*

Finally, there is one further factor to be borne in mind. The exhibits in this case show that West Virginia natural gas is composed of butane, ethane, pentane, propane and many extremely valuable lighter hydrocarbons. For ex-

ample, a very considerable proportion of butane is yielded from these natural gas deposits, which becomes of great importance in the production of butadiene for synthetic rubber purposes. In some respects, indeed, West Virginia gas is unique in its chemical composition, because so many of these relatively scarce hydrocarbons are present. It is not unreasonable to infer from this very situation that an expansion of the chemical industry will produce a vastly-increased demand for the refining of natural gas. Were that eventuality to come about in the face of a diminishing gas supply in West Virginia, it is reasonably possible that the use of natural gas for fuel purposes might be deliberately discouraged. That is to say, West Virginia gas would be far too valuable to be utilized merely for ordinary fuel-consumption purposes. Neither the present leasehold valuations nor the consequent well-mouth prices even take into consideration the existence of so important a factor. (See Price and Headlee, *Geochemistry of Natural Gas in Appalachian Province*, [1924] 26 Bulletin of American Association of Petroleum Geologists 19).[20]

---

[20] If the principles applied by the Commission in this case are upheld, then West Virginia must abandon all hope of that bright economic future whose dawn is just now disclosed by the rising sun of technological research. What shall it profit West Virginia that silk stockings can be made from gas, that alcohol obtained from gas makes rubber, that American soldiers ride the skies in parachutes made from gas, that in gas are found those hydrocarbons whose atoms can be rearranged by men of science into products as yet unknown to commerce? From all these and the wealth they promise, West Virginia must resolutely turn away, for the wealth the State might otherwise expect must henceforth and forevermore be restricted to a mere non-confiscatory return upon the original cost of the facilities used to produce the gas. Raigorodsky and Dotterweich, *War Products from Natural Gas and Natural Gasoline*, (1943), 14 PETROLEUM ENGINEER, 198, 203: "Constant vigilance on the part of the petroleum industry relative to the great potential possibilities of natural gas and natural gasoline will not only materially aid in the production of war products required by our armed forces but will place this industry in a most advantageous position to convert to the production of the immense quantities of synthetic consumer goods that will most assuredly come with the return to peace."

D. The State May In This Litigation Represent the Interests of West Virginia Lessors of Natural Gas.

It has already been indicated that natural gas is developed in West Virginia through a long-established method of leasing, by which the operator develops the land-owner's gas on a royalty basis. That owner retains his rent-receiving reversion, along with his legal right to cancel the outstanding lease in the event of abandonment or forfeiture; and the lessor's reversion is thus a valuable and well-defined property interest. However, the Federal Power Commission has utterly ignored the existing legal position as regards the West Virginia lessor. In effect, the Commission has insisted upon treating the Hope Company as though this operator were the sole owner in fee simple of all natural gas deposits involved in this litigation.

This Court will take judicial notice of the commonly-recognized fact that West Virginia is not an agricultural state, nor one which is suited for ordinary farming purposes. Its resources are largely those of mineral wealth, so that reasonable development of the State's coal, oil and gas has been the basis of its economy. In this connection, it might be said, ownership of fugacious minerals in fee simple has been for decades a rule of property law in West Virginia, (*Williamson* v. *Jones*, 39 W. Va. 231, 10 S. E. 436, [1894]; *Wilson* v. *Youst*, 43 W. Va. 826, 28 S. E. 781, [1897]; and *Preston* v. *Young*, 57 W. Va. 278, 50 S. E. 236, [1905]). Complete legal protection has always been given to the reversioner's interest, in the judicial treatment of the oil and gas leasehold. Now, for the first time, it is proposed to do away with such a fundamental doctrine of West Virginia

legal theory, and to regard the operator as the sole spokesman for the fee ownership of natural gas.

In two respects, at least, the result is fraught with serious consequences. On the one hand, no attention has been paid to the lessor's rent-receiving reversion; whether this be fixed on a gas-well rental basis or whether a one-eighth gas royalty has been stipulated. The Federal Power Commission may assert that the inclusion of rentals and royalties in operating expenses amply protects the lessor; and perhaps that would be true, were all the lessor's revenues actually contractual gas-well rentals. However, most modern West Virginia leases are now executed on a one-eighth gas-royalty basis, so that the well-mouth price of gas becomes the standard of the reversioner's compensation. It is once more arguing in a circle to assume that operating expenses can determine the amount of the farmer's income from the gas well, when the ultimate question is the precise price of gas,—which is to determine his one-eighth royalty. On the other hand, apart from the gas-well rental and gas royalty issue under the Natural Gas Act, no interstate producer can abandon either facilities or service without the Commission's approval, (15 U. S. C. 717f[b]); so the rule of *Pennsylvania* v. *West Virginia* has now become statutory law. Lessors have accordingly devoted their gas rights to an interstate public use. It would seem that the farmer cannot in the future withdraw his gas from the established current of interstate gas traffic. In short, the gas-owner's reversion has become public-utility property.

Even though a lessor has these vital interests in his rents and in the future of his reversion, the Federal Power Commission is unwilling to recognize that ownership. The State of West Virginia may thus insist that

no regulation of a local gas industry can be complete, unless the rights of the reversioner have been taken into full account. So long as the West Virginia farmer's best crop comes from the gas well on his land, the Commission must take that property interest into consideration in the working out of the State's future economy.

E. The State Has a Proprietary Interest In Leasehold Valuation, as Owner of Gas Deposits Under Public Lands.

According to the Constitution of West Virginia, (Constitution, Article XIII, Section 3), the State is owner of all waste and unappropriated lands. Among such unappropriated land is the bed of the Ohio River, which is held directly as the property of the State of West Virginia; and valuable mineral interests are known to underlie this river-bed. Moreover, the Public Land Corporation of West Virginia,—a governmental corporation,—has now been vested with the title of the State in other public lands, such as forfeited and unredeemed tax-delinquent properties, (West Virginia Revised Code, Chapter 37, Article 2A). Thus, West Virginia must be regarded as owner in fee simple of much land scattered throughout the State.

As land-owner, the State of West Virginia has a direct property interest in the protection of its gas deposits. It may, therefore, insist upon their proper valuation, and upon the orderly marketing of all underlying gas deposits. Unless the State now intervenes to protect its own natural gas, the administrative methods of valuation and marketing may be finally adjudged in the present proceeding. Accordingly, it is submitted that a reasonably fair valuation of leaseholds should be established, so as to create adequate markets in the future for all State-owned gas resources.

II

**The Federal Power Commission Has Disregarded the Specific Intent of Congress That the Provisions of the Natural Gas Act Shall Not Apply to Production Properties.**

In this case, the Commission has applied the provisions of the Natural Gas Act to the business of producing and gathering natural gas, contrary to the express language of Sec. 1 (b) of the Act, reading:

> "The provisions of this Act * * * shall not apply * * * to the production or gathering of natural gas."

The rate ordered by the Commission is calculated by adding together two principal components, i. e., (1) an allowance for the expense of interstate transportation, plus a return upon properties devoted to transportation, and (2) an allowance for the expense of production, plus a return upon properties devoted to production. The amounts included in the rate base and in expense are separately determined for transportation and for production in the Commission's opinion. In determination of the rate base, Hope's properties are separated into three general classes which are given the following designations by the Commission:

> Natural Gas Production Plant
> Transmission Plant
> General Plant

The Commission's opinion shows that it applied the provisions of the Act to all phases of the natural gas industry, beginning at the bottom of the well and continuing to the end of the transmission system.

The Commission investigated the original cost of drilling each hole and of the casing, tubing and other equip-

ment of each well. The same investigation was made of gathering lines. It likewise investigated the original cost of the leaseholds owned by Hope, and made a determination as between operated and unoperated acreage. From these investigations the Commission ascertained what it finds to be the original cost of the natural gas production plant and the amount of depreciation and depletion accrued therein to date. It also determined that part of the cost of certain of Hope's wells should be deducted from the total because such cost had been charged to operating expenses in previous years. Thus, the cost-finding and accounting provisions of the Act were applied to Hope's production and gathering properties. Having made these determinations, the Commission thereupon proceeded to apply the rate-making provisions of the Act to production and gathering properties. It added the cost of production properties to the cost of transmission properties and used the aggregate cost of all properties as the basic amount from which the rate-base was determined.

During the more than forty years of its existence, Hope has taken leases on more than 4,100,000 acres of land in West Virginia; leases on 3,150,000 acres have been cancelled; constant turnover and shifting of leases are involved, new leases being taken, and leases being cancelled and renewed and cancelled again, as discoveries are made. (Hope Exhibit No. 23, Methods of Gas Exploration and Development in West Virginia). The connection between such activities and the interstate transportation and sale of gas is remote. But their connection with the production of gas is immediate and direct. The Commission further extended the Act to regulation of the amount to be expended for future exploration and development, and of the amount to be included in expense for the cost of abandoning wells. The provisions of the

Act were thus applied to lands, leases, leaseholds and wells and will regulate the value of natural gas, not only at the well mouth before it enters interstate commerce, but while the gas is still in the ground, and the value of gas lands and gas leases. The effect of this regulation upon the resources of the state and counties and the properties of private landowners has been discussed elsewhere in this Brief.

Natural gas as an article of commerce is purchased and sold in an "open market" in which "fair market value" exists. The West Virginia Supreme Court has held that in establishing intrastate rates for natural gas, the utility will be charged with the *fair market value* of gas sold for out-of-state delivery to affiliated companies. (*Charleston v. Public Service Commission*, 95 W. Va. 91 [1923]; points 6 and 8 of official syllabi by Court.) In that case the contract price to the parent companies was less than fair market value. Under the Commission's order in the present case, the price Hope may charge for gas sold to its affiliates is fixed by regulation at less than market value. We concede that a fair return to their common stockholders upon the combined values of Hope's property and the property of its affiliates will satisfy constitutional demands. But the Commission's order, by disregarding the market value of gas, has appropriated to Hope's interstate customers an undue proportion of the total income of all affiliated companies; and in any future intrastate rate regulation by West Virginia, the market value of gas delivered to affiliates can no longer be included in total income, and only the value as fixed by the Commission may be so included. The West Virginia Court will apparently be compelled to change its rate-making principles.

Production of natural gas—the reduction of it to possession by wells bored from the surface—is a local or

state activity, subject to regulation by the state. (*Ohio Oil Co.* v. *Indiana*, 177 U. S. 190, 44 L. Ed. 729 [1900]). The state's rights to control and regulate oil wells were recently affirmed. (*Champlin Refining Co.* v. *Corporation Commission*, 286 U. S. 210, 76 L. Ed. 1062 [1932]; *Railroad Commission* v. *Rowan & Nichols Oil Co.*, 310 U. S. 573, 84 L. Ed. 1368 [1940]).

The local or interstate character of the business of producing gas, as it is conducted by Hope and now subjected by the Commission to the provisions of the Natural Gas Act, was adjudicated by the Supreme Court of West Virginia in (*Suttle, Adm'r.* v. *Hope Natural Gas Company*, 82 W. Va. 729 [1918]). Erecting a derrick to be used in cleaning one of Hope's gas wells to accelerate its production was the activity involved. West Virginia's Court said:

• • •

> "Hence it becomes necessary to consider whether the work which the deceased was doing was clearly separable and distinguishable from interstate commerce. Until reduced to possession by confinement, natural gas, it is said, though somewhat inaccurately, partakes of the nature of ferae naturae. It is not the subject of ownership till brought to the surface and confined, and of course cannot become the subject of interstate commerce till its ownership becomes complete by confinement in the ordinary, indeed the only competent, mode of transportation, pipe line conduits. The well reaches down to the gas bearing strata and releases the gas there confined, but until it reaches the surface and enters the pipe for transmission to the interstate trunk lines, it is not in interstate commerce. The production department of the gas industry is clearly separable from the transporting or marketing branch. All work in con-

nection with the production of gas, that is, with bringing it to the surface where it may be confined and reduced to possession, is local in nature and clearly separable and distinguishable from the marketing or interstate portion of the industry."

• • •

It will not be presumed that Congress intended to confer any jurisdiction over such local or state activity to the Federal Power Commission, (*Federal Trade Commission* v. *Bunte Brothers*, 312 U. S. 349, 85 L. Ed. 881 [1941]). In (*Kirchbaum* v. *Walling*, 316 U. S. 517 [1942]), this Court said:

"To a considerable extent the task is one of accommodation as between assertions of new federal authority and historic functions of the individual states. The expansion of our industrial economy has inevitably been reflected in the extension of federal authority over economic enterprise and its absorption of authority previously possessed by the States. Federal legislation of this character cannot therefore be construed without regard to the implications of our dual system of government.

"We cannot, therefore, indulge in loose assumption that when Congress adopts a new scheme for federal industrial regulation, it thereby deals with all situations falling within the general mischief which gave rise to the legislation. Such an assumption might be valid where remedy of the mischief is the concern of only a single unitary government. It cannot be accepted where the practicalities of federalism—or, more precisely, the underlying assumptions of our dual form of government and the consequent presuppositions of legislative draftsmanship which are expressive

of our history and habits—cut across what might otherwise be the implied range of the legislation. Congress may choose, as it has chosen frequently in the past, to regulate only part of what it constitutionally can regulate, leaving to the States activities which, if isolated, are only local.

"* * * The history of congressional legislation regulating not only interstate commerce as such but also activities intertwined with it, justifies the generalization that, when the federal government takes over such local radiations in the vast network of our national economic enterprise and thereby radically readjusts the balance of state and national authority, those charged with the duty of legislating are reasonably explicit and do not entrust its attainment to that restrospective expansion of meaning which properly deserves the stigma of judicial legislation. * * *"

It may be argued that authority to so apply the provisions of the Act to the business of producing natural gas may be drawn from other sections of the Act. Section 5 (b), for instance, gives the Commission authority to investigate and determine the cost of the production of natural gas by a natural gas company in cases where it has no authority to establish rates. Section 6 (a) gives the Commission authority to investigate and ascertain the actual legitimate cost of the property of every natural gas company. Section 9 (a) gives the Commission authority to determine rates of depreciation and amortization of production property. Section 10 (a) enables the Commission to require filing of reports including cost of facilities and of maintenance and operation of facilities for production of gas. Section 14 (b) permits the Commission to determine the adequacy or inadequacy of reserves. In only one of these sections did Congress use language implying that the result of any such determina-

tions might be reflected in the establishment of a rate. This provision is contained in Section 14 (b) where the Commission is authorized to determine the propriety and reasonableness of including delay rentals, or other forms of rental or compensation for unoperated lands and leases, in operating expenses, capital or surplus.

To hold that these other sections give the Commission authority to apply its rate making principles to the production of gas, beginning with lands and leases both operated and unoperated and continuing from the bottom of the well to the end of the transmission system, makes the latter sections override Section 1 (b) and completely destroy it. No part of the natural gas industry related to interstate transportation and sale, to which the negative language of Section 1 (b) can apply, would remain.

In acertaining the scope of this legislation and in thus applying the provisions of the Act to production properties and that part of the gas business devoted to production of gas, the Commission had no regard whatsoever for a proper adjustment of local and national interests in our federal scheme. (*Federal Trade Commission* v. *Bunte Brothers*, 312 U. S. 349, 85 L. Ed. 881 [1941]). On the contrary, it wholly ignored the interests local to West Virginia and with an eye single to interests local to Ohio and Pennsylvania, applied the Act to every phase of the gas business and drastically reduced the values of gas and gas producing lands in West Virginia.

The manner in which the Commission has applied the Act to the local activity of producing gas, and its inescapable regulation of local economy, are perilously close to an invasion of the sovereignty or quasi-sovereignty of West Virginia, and of a field of autonomy preserved against federal encroachment by the Tenth Amendment. (*Hopkins Federal Savings & Loan Assn.* v. *Cleary*, 296 U. S. 315, 80 L. Ed. 251 [1935]).

Moreover, Hope Construction & Refining Company operates some natural gas wells and about one thousand (1000) oil wells producing casinghead gas (R. 4252). Its gas from dry gas wells and its casinghead gas from oil wells is sold to Hope and becomes an integral part of the gas from which gasoline and butane are extracted and of the mass of gas delivered to consumers by Hope. The recommended method of handling the income of Hope Construction & Refining Company will be fatal to the gasoline extraction business and to experimental research in West Virginia, or at least to that part of the business conducted by affiliates of the natural gas companies.

## III

## The Proper Adjustment of Local and National Interests Necessitates Modification of the Federal Power Commission Order.

If we were unable to suggest formulas upon which rates for interstate transportation and sale of gas might be established other than the formula followed by the Commission, considerable force might be lent to the Commission's construction of the Act. However, at least one other way was suggested to the West Virginia Public Service Commission in 1926 by a Federal Court. That was the case of (*United Fuel Gas Company* v. *Public Service Commission*, 14 Fed. [2d] 209, affirmed 278 U. S. 322 [1929]), involving, among others, the vexatious problem of the value to be given natural gas reserves—that and other problems, the Court said, were difficult or impossible to solve. The solution suggested was (1) that the value of the utility's *tangible* property be ascertained with an allowance for working capital and going concern value, which would represent all upon which a return should be earned and depreciation and amortization allowed, and (2) that *the fair market value of gas delivered*

*to customers* be added to the outlay for operating expenses and taxes in determining whether the rate was sufficient to cover a return and an allowance for depreciation and amortization. That the suggestion was dictum may be admitted, but the decision was by a three-judge statutory court.

In its brief and argument before the Commission, West Virginia urged that there must be separate determination of the value of gas at the well mouth based upon the going market value in the field where the gas is produced; that such amount having been determined the interstate rate might be established by adding thereto the allowance for operating expenses, depreciation, taxes and return on the transportation system. This is consistent with *Hope Natural Gas Company* v. *Hall*, (102 W. Va. 272, affirmed 274 U. S. 284 [1927]), approving ascertainment of the value or worth of gas *in West Virginia* for tax purposes. Of course, we do not mean to imply that these are the only formulas that can be devised for applying the Act with proper adjustment of local and national interests.

Natural gas, as a fuel or as the raw material for commercial products, is marketed in competition with coal and oil. (see *Appalachian Coals, Inc.* v. *U. S.*, 288 U. S. 344, 361-362 [1933]). Its worth for either use is relative and is controlled by comparison of its values with the values contained in coal and oil. The competitive relationship between gas and coal as fuel is dramatically illustrated in this case by the recommendation of the Commission's gas engineer that during periods of peak demand for gas the power requirements of Hope's system be obtained by using coal instead of gas as fuel, (Record, pp. 4439-4444). Nor does all natural gas have the same worth. Its content of methane, ethane and nitro-

gen, and its heating value vary as between fields and as between wells. From the standpoint of the owner of a supply of natural gas, its proximity to markets is an economic advantage over more distant fields. All of these considerations affect value. None of them have been given any consideration by the Commission.

Ascertaining the going-market price of gas at the well mouth is difficult but not impossible. For fifty years business men in West Virginia have done it, and billions of feet of gas have changed hands on their judgments as to its price, thousands of leases have been purchased and sold, well drilling operations have been started or stopped, pipe lines built and capital investments made. Any regulatory commission can make the determination if it will accept the same evidence that ordinary reasonable men accept. The difficulty has been to produce evidence which a regulatory Commission could not constitutionally ignore. The Commission partially investigated it in the present case. Its staff prepared and filed an exhibit entitled "Analysis of Natural Gas Purchased and Prices Paid by Utilities in West Virginia." (Exhibit No. 49.) In this exhibit the staff analyzed all purchases made in West Virginia by the twelve largest utilities during the three years 1937, 1938 and 1939. Tables III, IV and V filed with this exhibit show that such utilities paid thirteen cents or more per m. c. f. for approximately sixty per centum of their gas. The exhibit shows, and we freely concede, that conditions of delivery vary widely and the price named in one purchase contract may not be comparable with the price named in other contracts. But adjustments may be made to correct such variations and the exhibit contains this statement: "The prices presented here are representative of West Virginia natural gas prices because they include more than 90% of such purchases." (Page 2 of Exhibit.)

In the three years covered by this exhibit, the gas purchases by the twelve utilities was roughly seventy per centum of the State's total production.

Ascertainment of the prices paid for the gas not purchased by the twelve utilities, including unregulated sales to industrial plants, presents no insuperable problem. Analysis of all sales, regulated as well as unregulated, with proper adjustments for sales between affiliates that are not arm length sales and other adjustments, would disclose the well mouth market price or market value of West Virginia gas. A rate based thereon would reflect the value of gas as a fuel and as the raw material for products of commerce, and the effects thereon of competition and the myriad factors that make market prices. Of a value thus determined, West Virginia cannot and would not complain.

All of Hope's properties, transportation properties as well as production properties, lie, and all of its business is done, within the borders of West Virginia. Assessment of such properties for taxation in order that they may bear their full share of the burden of State and local government is in consequence a matter of extreme importance to the State. If, through the action of the Federal Power Commission, any property has been eliminated from the assets of the company, assessed values will immediately be affected.

Of course, there could be no physical elimination of any property from assets. Such elimination would be accomplished, however, by a method of rate regulation, which, when principles of assessment for taxation were applied to the result, would necessarily require omission of property from the tax base.

Properties of natural gas companies in West Virginia are assessed by the Board of Public Works at their true

and actual value, (*Code of West Virginia*, Chap. 11, Art. 6, Sec. 11). Value is an economic fact. For public utilities it is to some extent a result of rates; and the amount of value which will result from a given rate base can in part be estimated. (*Dorety, The Function of Reproduction Cost*, 37 Harvard Law Review, 173 at 189.) The principles governing the ascertainment of value for the purpose of taxation are the same as those that control in condemnation cases, confiscation cases, and generally in controversies involving the ascertainment of just compensation. (See *Great Northern Railway Company* v. *Weeks*, 297 U. S. 135, 80 Law. Ed. 532 [1935]).

When West Virginia comes to apply the principles which govern the ascertainment of the value of Hope's property for taxation, it cannot ignore the impact upon earnings resulting from the Commission's regulation of Hope's rates. If any property has been omitted from the rate base so that no earnings can accrue thereon, West Virginia cannot continue to retain the value of such property in the tax base. This is not required by any provisions of constitutions or statutes. It is rather because reason and experience have taught that sterile property, property which has lost the power to produce profit, ultimately becomes worthless in the commercial world, and things which become worthless in the commercial world sooner or later cease to be the subjects of taxation. Furthermore, the omission of this item of property from the rate base necessarily reduces the gross proceeds derived from the sale of gas upon which West Virginia levies a tax for the privilege of engaging in the business of producing gas, (*Code of West Virginia*, Chap. 11, Art. 13).

Going concern value was wholly omitted from the rate base on which the commission permitted Hope to earn a return. The rate base is frankly and openly restricted

to actual depreciated cost. Going concern value need not be separately stated if it is otherwise included in the rate base, but when original cost alone is used, it cannot be claimed that going concern value was included.

To a considerable extent, the Commission determined Hope's rate of return upon considerations indicating recognition of elements of going concern value. The company's efficient management, it said, and its established markets, its available supply of gas, its financial record, its affiliations and prospective business placed it in a strong position to attract capital upon favorable terms when it is required. Hope, says the Commission, is a seasoned enterprise whose risks have been minimized. These are the reasons given for prescribing a rate of return of 6½%. They were equally cogent reasons for appraising the physical assets as an assembled whole rather than at their mere original cost.

As indicated elsewhere in this Brief, this is not merely a contest between the utility concerned and consumers in Ohio and Pennsylvania. The contest involves the welfare of West Virginia and its citizens. West Virginia asserts that it was unjust to its welfare to omit from the basic value base, from which both rates and taxes must hereafter be computed, an item of property so long considered legitimate by State and Federal Courts and regulatory commissions, and that no rate thus determined is just and reasonable as required by the Natural Gas Act.

## CONCLUSION

From the foregoing discussion in the presen' Brief as Amicus Curiae, the order of the Federal Power Commission has been shown to be arbitrary and confiscatory, to the extent that the Commission has wholly refused to view the effect of its drastic rulings upon the economy and

well-being of the producing state, considering only the interests of out-of-state consumers. The State of West Virginia urges, therefore, that the judgment of the Circuit Court of Appeals be affirmed, and that these proceedings be returned to the Commission with appropriate directions from this Court that the Natural Gas Act be administered according to the federal nature of the Constitution.

Respectfully submitted,

M. M. NEELY,
*Governor of the State of West Virginia,*
*Charleston, West Virginia.*

IRA J. PARTLOW,
*Acting Attorney General of the State of West Virginia,*
*Charleston, West Virginia.*

W. W. GOLDSMITH,
*Special Assistant Attorney General,*
*State of West Virginia,*
*Charleston, West Virginia,*
*Attorneys for West Virginia.*

October 19, 1943.

# SUPREME COURT OF THE UNITED STATES.

Nos. 34 and 35.—October Term, 1943.

Federal Power Commission, City of Akron and Pennsylvania Public Utility Commission, Petitioners,
34 vs.
Hope Natural Gas Company.

City of Cleveland, Petitioner,
35 vs.
Hope Natural Gas Company.

On Writs of Certiorari to the United States Circuit Court of Appeals for the Fourth Circuit.

[January 3, 1944.]

Mr. Justice Douglas delivered the opinion of the Court.

The primary issue in these cases concerns the validity under the Natural Gas Act of 1938 (52 Stat. 821, 15 U. S. C. § 717) of a rate order issued by the Federal Power Commission reducing the rates chargeable by Hope Natural Gas Co., 44 P. U. R. (N. S.) 1. On a petition for review of the order made pursuant to § 19(b) of the Act, the Circuit Court of Appeals set it aside, one judge dissenting. 134 F. 2d 287. The cases are here on petitions for writs of certiorari which we granted because of the public importance of the questions presented.

Hope is a West Virginia corporation organized in 1898. It is a wholly owned subsidiary of Standard Oil Co. (N. J.). Since the date of its organization, it has been in the business of producing, purchasing and marketing natural gas in that state.[1] It sells some of that gas to local consumers in West Virginia. But the great bulk of it goes to five customer companies which receive it at the West Virginia line and distribute it in Ohio and in Pennsylvania.[2] In July, 1938 the cities of Cleveland and Akron filed complaints with the Commission charging that

[1] Hope produces about one-third of its annual gas requirements and purchases the rest under some 300 contracts.

[2] These five companies are the East Ohio Gas Co., the Peoples Natural Gas Co., the River Gas Co., the Fayette County Gas Co., and the Manufacturers Light & Heat Co. The first three of these companies are, like Hope, sub-

the rates collected by Hope from East Ohio Gas Co. (an affiliate of Hope which distributes gas in Ohio) were excessive and unreasonable. Later in 1938 the Commission on its own motion instituted an investigation to determine the reasonableness of all of Hope's interstate rates. In March 1939 the Public Utility Commission of Pennsylvania filed a complaint with the Commission charging that the rates collected by Hope from Peoples Natural Gas Co. (an affiliate of Hope distributing gas in Pennsylvania) and two non-affiliated companies were unreasonable. The City of Cleveland asked that the challenged rates be declared unlawful and that just and reasonable rates be determined from June 30, 1939 to the date of the Commission's order. The latter finding was requested in aid of state regulation and to afford the Public Utilities Commission of Ohio a proper basis for disposition of a fund collected by East Ohio under bond from Ohio consumers since June 30, 1939. The cases were consolidated and hearings were held.

On May 26, 1942, the Commission entered its order and made its findings. Its order required Hope to decrease its future interstate rates so as to reflect a reduction, on an annual basis, of not less than $3,609,857 in operating revenues. And it established "just and reasonable" average rates per m. c. f. for each of the five customer companies.[3] In response to the prayer of the City of Cleveland the Commission also made findings as to the lawfulness of past rates, although concededly it had no authority under the Act to fix past rates or to award reparations. 44 P. U. R. (N. S.) p. 34. It found that the rates collected by Hope from East Ohio were unjust, unreasonable, excessive and there-

---

sidiaries of Standard Oil Co. (N. J.). East Ohio and River distribute gas in Ohio, the other three in Pennsylvania. Hope's approximate sales in m. c. f. for 1940 may be classified as follows:

| | |
|---|---|
| Local West Virginia sales | 11,000,000 |
| East Ohio | 40,000,000 |
| Peoples | 10,000,000 |
| River | 400,000 |
| Fayette | 860,000 |
| Manufacturers | 2,000,000 |

Hope's natural gas is processed by Hope Construction & Refining Co., an affiliate, for the extraction of gasoline and butane. Domestic Coke Corp., another affiliate, sells coke-oven gas to Hope for boiler fuel.

[3] These required minimum reductions of 7¢ per m. c. f. from the 36.5¢ and 35.5¢ rates previously charged East Ohio and Peoples, respectively, and 3¢ per m. c. f. from the 31.5¢ rate previously charged Fayette and Manufacturers.

fore unlawful, by $830,892 during 1939, $3,219,551 during 1940, and $2,815,789 on an annual basis since 1940. It further found that just, reasonable, and lawful rates for gas sold by Hope to East Ohio for resale for ultimate public consumption were those required to produce $11,528,608 for 1939, $11,507,185 for 1940 and $11,910,947 annually since 1940.

The Commission established an interstate rate base of $33,712,526 which, it found, represented the "actual legitimate cost" of the company's interstate property less depletion and depreciation and plus unoperated acreage, working capital and future net capital additions. The Commission, beginning with book cost, made certain adjustments not necessary to relate here and found the "actual legitimate cost" of the plant in interstate service to be $51,957,416, as of December 31, 1940. It deducted accrued depletion and depreciation, which it found to be $22,328,016 on an "economic-service-life" basis. And it added $1,392,021 for future net capital additions, $566,105 for useful unoperated acreage, and $2,125,000 for working capital. It used 1940 as a test year to estimate future revenues and expenses. It allowed over $16,000,000 as annual operating expenses—about $1,300,000 for taxes, $1,460,000 for depletion and depreciation, $600,000 for exploration and development costs, $8,500,000 for gas purchased. The Commission allowed a net increase of $421,160 over 1940 operating expenses, which amount was to take care of future increase in wages, in West Virginia property taxes, and in exploration and development costs. The total amount of deductions allowed from interstate revenues was $13,495,584.

Hope introduced evidence from which it estimated reproduction cost of the property at $97,000,000. It also presented a so-called trended "original cost" estimate which exceeded $105,000,000. The latter was designed, "to indicate what the original cost of the property would have been if 1938 material and labor prices had prevailed throughout the whole period of the piecemeal construction of the company's property since 1898." 44 P. U. R. (N. S.), pp. 8-9. Hope estimated by the "per cent condition" method accrued depreciation at about 35% of reproduction cost new. On that basis Hope contended for a rate base of $66,000,000. The Commission refused to place any reliance on reproduction cost new, saying that it was "not predicated upon facts" and was "too conjectural and illusory to be given any weight in these proceedings." *Id.*, p. 8. It likewise refused to give any

"probative value" to trended "original cost" since it was "not founded in fact" but was "basically erroneous" and produced "irrational results." *Id.*, p. 9. In determining the amount of accrued depletion and depreciation the Commission, following *Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151, 167-169; *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 592-593, based its computation on "actual legitimate cost". It found that Hope during the years when its business was not under regulation did not observe "sound depreciation and depletion practices" but "actually accumulated an excessive reserve"[4] of about $46,000,000. *Id.*, p. 18. One member of the Commission thought that the entire amount of the reserve should be deducted from "actual legitimate cost" in determining the rate base.[5] The majority of the Commission concluded, however, that where, as here, a business is brought under regulation for the first time and where incorrect depreciation and depletion practices have prevailed, the deduction of the reserve requirement (actual existing depreciation and depletion) rather than the excessive reserve should be made so as to lay "a sound basis for future regulation and control of rates." *Id.*, p. 18. As we have pointed out, it determined accrued depletion and depreciation to be $22,328,016; and it allowed approximately $1,460,000 as the annual operating expense for depletion and depreciation.[6]

---

[4] The book reserve for interstate plant amounted at the end of 1938 to about $18,000,000 more than the amount determined by the Commission as the proper reserve requirement. The Commission also noted that "twice in the past the company has transferred amounts aggregating $7,500,000 from the depreciation and depletion reserve to surplus. When these latter adjustments are taken into account, the excess becomes $25,500,000, which has been exacted from the ratepayers over and above the amount required to cover the consumption of property in the service rendered and thus to keep the investment unimpaired." 44 P. U. R. (N. S.), p. 22.

[5] That contention was based on the fact that "every single dollar in the depreciation and depletion reserves" was taken "from gross operating revenues whose only source was the amounts charged customers in the past for natural gas. It is, therefore, a fact that the depreciation and depletion reserves have been contributed by the customers and do not represent any investment by Hope." *Id.*, p. 40. And see Railroad Commission v. Cumberland Tel. & T. Co., 212 U. S. 414, 424-425; 2 Bonbright, Valuation of Property (1937), p. 1139.

[6] The Commission noted that the case was "free from the usual complexities involved in the estimate of gas reserves because the geologists for the company and the Commission presented estimates of the remaining recoverable gas reserves which were about one per cent apart." 44 P. U. R. (N. S.), pp. 19-20.

The Commission utilized the "straight-line-basis" for determining the depreciation and depletion reserve requirements. It used estimates of the

Hope's estimate of original cost was about $69,735,000—approximately $17,000,000 more than the amount found by the Commission. The item of $17,000,000 was made up largely of expenditures which prior to December 31, 1938, were charged to operating expenses. Chief among those expenditures was some $12,600,000 expended in well-drilling prior to 1923. Most of that sum was expended by Hope for labor, use of drilling-rigs, hauling, and similar costs of well-drilling. Prior to 1923 Hope followed the general practice of the natural gas industry and charged the cost of drilling wells to operating expenses. Hope continued that practice until the Public Service Commission of West Virginia in 1923 required it to capitalize such expenditures, as does the Commission under its present Uniform System of Accounts.[7] The Commission refused to add such items to the rate base stating that "No greater injustice to consumers could be done than to allow items as operating expenses and at a later date include them in the rate base, thereby placing multiple charges upon the consumers." *Id.*, p. 12. For the same reason the Commission excluded from the rate base about $1,600,000 of expenditures on properties which Hope acquired from other utilities, the latter having charged those payments to operating expenses. The Commission disallowed certain other overhead items amounting to over $3,000,000 which also had been previously charged to operating expenses. And it refused to add some $632,000 as interest during construction since no interest was in fact paid.

Hope contended that it should be allowed a return of not less than 8%. The Commission found that an 8% return would be unreasonable but that 6½% was a fair rate of return. That rate of return, applied to the rate base of $33,712,526, would

average service lives of the property by classes based in part on an inspection of the physical condition of the property. And studies were made of Hope's retirement experience and maintenance policies over the years. The average service lives of the various classes of property were converted into depreciation rates and then applied to the cost of the property to ascertain the portion of the cost which had expired in rendering the service.

The record in the present case shows that Hope is on the lookout for new sources of supply of natural gas and is contemplating an extension of its pipe line into Louisiana for that purpose. The Commission recognized in fixing the rates of depreciation that much material may be used again when various present sources of gas supply are exhausted, thus giving that property more than scrap value at the end of its present use.

[7] See Uniform System of Accounts prescribed for Natural Gas Companies effective January 1, 1940, Account No. 332.1.

produce $2,191,314 annually, as compared with the present income of not less than $5,801,171.

The Circuit Court of Appeals set aside the order of the Commission for the following reasons. (1) It held that the rate base should reflect the "present fair value" of the property, that the Commission in determining the "value" should have considered reproduction cost and trended original cost, and that "actual legitimate cost" (prudent investment) was not the proper measure of "fair value" where price levels had changed since the investment. (2) It concluded that the well-drilling costs and overhead items in the amount of some $17,000,000 should have been included in the rate base. (3) It held that accrued depletion and depreciation and the annual allowance for that expense should be computed on the basis of "present fair value" of the property not on the basis of "actual legitimate cost".

The Circuit Court of Appeals also held that the Commission had no power to make findings as to past rates in aid of state regulation. But it concluded that those findings were proper as a step in the process of fixing future rates. Viewed in that light, however, the findings were deemed to be invalidated by the same errors which vitiated the findings on which the rate order was based.

*Order Reducing Rates.* Congress has provided in § 4(a) of the Natural Gas Act that all natural gas rates subject to the jurisdiction of the Commission "shall be just and reasonable, and any such rate or charge that is not just and reasonable is hereby declared to be unlawful." Sec. 5(a) gives the Commission the power, after hearing, to determine the "just and reasonable rate" to be thereafter observed and to fix the rate by order. Sec. 5(a) also empowers the Commission to order a "decrease where existing rates are unjust . . . unlawful, or are not the lowest reasonable rates." And Congress has provided in § 19(b) that on review of these rate orders the "finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive." Congress, however, has provided no formula by which the "just and reasonable" rate is to be determined. It has not filled in the details of the general prescription[8] of § 4(a)

[8] Sec. 6 of the Act comes the closest to supplying any definite criteria for rate making. It provides in subsection (a) that, "The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such

and § 5(a). It has not expressed in a specific rule the fixed principle of "just and reasonable".

When we sustained the constitutionality of the Natural Gas Act in the *Natural Gas Pipeline Co.* case, we stated that the "authority of Congress to regulate the prices of commodities in interstate commerce is at least as great under the Fifth Amendment as is that of the States under the Fourteenth to regulate the prices of commodities in intrastate commerce." 315 U. S. p. 582. Rate-making is indeed but one species of price-fixing. *Munn* v. *Illinois*, 94 U. S. 113, 134. The fixing of prices, like other applications of the police power, may reduce the value of the property which is being regulated. But the fact that the value is reduced does not mean that the regulation is invalid. *Block* v. *Hirsh*, 256 U. S. 135, 155-157; *Nebbia* v. *New York*, 291 U. S. 502, 523-539 and cases cited. It does, however, indicate that "fair value" is the end product of the process of rate-making not the starting point as the Circuit Court of Appeals held. The heart of the matter is that rates cannot be made to depend upon "fair value" when the value of the going enterprise depends on earnings under whatever rates may be anticipated.[9]

We held in *Federal Power Commission* v. *Natural Gas Pipeline Co.*, *supra*, that the Commission was not bound to the use of any single formula or combination of formulae in determining rates. Its rate-making function, moreover, involves the making of "pragmatic adjustments." *Id.*, p. 586. And when the Commission's order is challenged in the courts, the question is whether that order "viewed in its entirety" meets the requirements of the Act. *Id.*, p. 586. Under the statutory standard of "just and reasonable" it is the result reached not the method employed which is controlling. Cf. *Los Angeles Gas & Electric Corp.* v. *Railroad Commission*, 289 U. S. 287, 304-305, 314; *West Ohio Gas Co.* v. *Commission* (No. 1), 294 U. S. 63, 70; *West* v. *Chesapeake & Potomac Tel.*

cost or depreciation and the fair value of such property." Subsection (b) provides that every natural-gas company on request shall file with the Commission a statement of the "original cost" of its property and shall keep the Commission informed regarding the "cost" of all additions, etc.

[9] We recently stated that the meaning of the word "value" is to be gathered "from the purpose for which a valuation is being made. Thus the question in a valuation for rate making is how much a utility will be allowed to earn. The basic question in a valuation for reorganization purposes is how much the enterprise in all probability can earn." Institutional Investors v. Chicago, M., St. P. & P. R. Co., 318 U. S. 523, 540.

*Co.*, 295 U. S. 662, 692-693 (dissenting opinion). It is not theory but the impact of the rate order which counts. If the total effect of the rate order cannot be said to be unjust and unreasonable, judicial inquiry under the Act is at an end. The fact that the method employed to reach that result may contain infirmities is not then important. Moreover, the Commission's order does not become suspect by reason of the fact that it is challenged. It is the product of expert judgment which carries a presumption of validity. And he who would upset the rate order under the Act carries the heavy burden of making a convincing showing that it is invalid because it is unjust and unreasonable in its consequences. Cf. *Railroad Commission* v. *Cumberland Tel. & T. Co.*, 212 U. S. 414; *Lindheimer* v. *Illinois Tel. Co., supra*, pp. 164, 169; *Railroad Commission* v. *Pacific Gas & E. Co.*, 302 U. S. 388, 401.

The rate-making process under the Act, i. e., the fixing of "just and reasonable" rates, involves a balancing of the investor and the consumer interests. Thus we stated in the *Natural Gas Pipeline Co.* case that "regulation does not insure that the business shall produce net revenues." 315 U. S. p. 590. But such considerations aside, the investor interest has a legitimate concern with the financial integrity of the company whose rates are being regulated. From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock. Cf. *Chicago & Grand Trunk Ry. Co.* v. *Wellman*, 143 U. S. 339, 345-346. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital. See *Missouri ex rel. Southwestern Bell Tel. Co.* v. *Public Service Commission*, 262 U. S. 276, 291 (Mr. Justice Brandeis concurring). The conditions under which more or less might be allowed are not important here. Nor is it important to this case to determine the various permissible ways in which any rate base on which the return is computed might be arrived at. For we are of the view that the end result in this case cannot be condemned under the Act as unjust and unreasonable from the investor or company viewpoint.

We have already noted that Hope is a wholly owned subsidiary of the Standard Oil Co. (N. J.). It has no securities outstanding except stock. All of that stock has been owned by Standard since 1908. The par amount presently outstanding is approximately $28,000,000 as compared with the rate base of $33,712,526 established by the Commission. Of the total outstanding stock $11,000,000 was issued in stock dividends. The balance, or about $17,000,000, was issued for cash or other assets. During the four decades of its operations Hope has paid over $97,000,000 in cash dividends. It had, moreover, accumulated by 1940 an earned surplus of about $8,000,000. It had thus earned the total investment in the company nearly seven times. Down to 1940 it earned over 20% per year on the average annual amount of its capital stock issued for cash or other assets. On an average invested capital of some $23,000,000 Hope's average earnings have been about 12% a year. And during this period it had accumulated in addition reserves for depletion and depreciation of about $46,000,000. Furthermore, during 1939, 1940 and 1941, Hope paid dividends of 10% on its stock. And in the year 1942, during about half of which the lower rates were in effect, it paid dividends of 7½%. From 1939-1942 its earned surplus increased from $5,250,000 to about $13,700,000, i. e., to almost half the par value of its outstanding stock.

As we have noted, the Commission fixed a rate of return which permits Hope to earn $2,191,314 annually. In determining that amount it stressed the importance of maintaining the financial integrity of the company. It considered the financial history of Hope and a vast array of data bearing on the natural gas industry, related businesses, and general economic conditions. It noted that the yields on better issues of bonds of natural gas companies sold in the last few years were "close to 3 per cent", 44 P. U. R. (N. S.), p. 33. It stated that the company was a "seasoned enterprise whose risks have been minimized" by adequate provisions for depletion and depreciation (past and present) with "concurrent high profits", by "protected established markets, through affiliated distribution companies, in populous and industralized areas", and by a supply of gas locally to meet all requirements, "except on certain peak days in the winter, which it is feasible to supplement in the future with gas from other sources." *Id.*, p. 33. The Commission concluded, "The company's efficient management, established markets, financial rec-

ord, affiliations, and its prospective business place it in a strong position to attract capital upon favorable terms when it is required." *Id.*, p. 33.

In view of these various considerations we cannot say that an annual return of $2,191,314 is not "just and reasonable" within the meaning of the Act. Rates which enable the company to operate successfully, to maintain its financial integrity, to attract capital, and to compensate its investors for the risks assumed certainly cannot be condemned as invalid, even though they might produce only a meager return on the so-called "fair value" rate base. In that connection it will be recalled that Hope contended for a rate base of $66,000,000 computed on reproduction cost new. The Commission points out that if that rate base were accepted, Hope's average rate of return for the four-year period from 1937-1940 would amount to 3.27%. During that period Hope earned an annual average return of about 9% on the average investment. It asked for no rate increases. Its properties were well maintained and operated. As the Commission says such a modest rate of 3.27% suggests an "inflation of the base on which the rate has been computed." *Dayton Power & Light Co.* v. *Public Utilities Commission*, 292 U. S. 290, 312. Cf. *Lindheimer* v. *Illinois Bell Tel. Co.*, *supra*, p. 164. The incongruity between the actual operations and the return computed on the basis of reproduction cost suggests that the Commission was wholly justified in rejecting the latter as the measure of the rate base.

In view of this disposition of the controversy we need not stop to inquire whether the failure of the Commission to add the $17,000,000 of well-drilling and other costs to the rate base was consistent with the prudent investment theory as developed and applied in particular cases.

Only a word need be added respecting depletion and depreciation. We held in the *Natural Gas Pipeline Co.* case that there was no constitutional requirement "that the owner who embarks in a wasting-asset business of limited life shall receive at the end more than he has put into it." 315 U. S. p. 593. The Circuit Court of Appeals did not think that that rule was applicable here because Hope was a utility required to continue its service to the public and not scheduled to end its business on a day certain as was stipulated to be true of the Natural Gas Pipeline

Co. But that distinction is quite immaterial. The ultimate exhaustion of the supply is inevitable in the case of all natural gas companies. Moreover, this Court recognized in *Lindheimer* v. *Illinois Bell Tel. Co., supra,* the propriety of basing annual depreciation on cost.[10] By such a procedure the utility is made whole and the integrity of its investment maintained.[11] No more is required.[12] We cannot approve the contrary holding of *United Railways* v. *West,* 280 U. S. 234, 253-254. Since there are no constitutional requirements more exacting than the standards of the Act, a rate order which conforms to the latter does not run afoul of the former.

*The Position of West Virginia.* The State of West Virginia, as well as its Public Service Commission, intervened in the proceedings before the Commission and participated in the hearings before it. They have also filed a brief *amicus curiae* here and have participated in the argument at the bar. Their contention is that the result achieved by the rate order "brings consequences which are unjust to West Virginia and its citizens" and which "unfairly depress the value of gas, gas lands and gas leaseholds, unduly restrict development of their natural resources, and arbitrarily transfer their properties to the residents of other states without just compensation therefor."

West Virginia points out that the Hope Natural Gas Co. holds a large number of leases on both producing and unoperated properties. The owner or grantor receives from the operator or grantee delay rentals as compensation for postponed drilling. When a producing well is successfully brought in, the gas lease custo-

---

[10] Chief Justice Hughes said in that case (292 U. S. pp. 168-169): "If the predictions of service life were entirely accurate and retirements were made when and as these predictions were precisely fulfilled, the depreciation reserve would represent the consumption of capital, on a cost basis, according to the method which spreads that loss over the respective service periods. But if the amounts charged to operating expenses and credited to the account for depreciation reserve are excessive, to that extent subscribers for the telephone service are required to provide, in effect, capital contributions, not to make good losses incurred by the utility in the service rendered and thus to keep its investment unimpaired, but to secure additional plant and equipment upon which the utility expects a return."

[11] See Mr. Justice Brandeis (dissenting) in United Railways v. West, 280 U. S. 234, 259-288, for an extended analysis of the problem.

[12] It should be noted that the Act provides no specific rule governing depletion and depreciation. Sec. 9(a) merely states that the Commission "may from time to time ascertain and determine, and by order fix, the proper and adequate rates of depreciation and amortization of the several classes of property of each natural-gas company used or useful in the production, transportation, or sale of natural gas."

marily continues indefinitely for the life of the field. In that case the operator pays a stipulated gas-well rental or in some cases a gas royalty equivalent to one-eighth of the gas marketed.[13] Both the owner and operator have valuable property interests in the gas which are separately taxable under West Virginia law. The contention is that the reversionary interests in the leaseholds should be represented in the rate proceedings since it is their gas which is being sold in interstate commerce. It is argued, moreover, that the owners of the reversionary interests should have the benefit of the "discovery value" of the gas leaseholds, not the interstate consumers. Furthermore, West Virginia contends that the Commission in fixing a rate for natural gas produced in that State should consider the effect of the rate order on the economy of West Virginia. It is pointed out that gas is a wasting asset with a rapidly diminishing supply. As a result West Virginia's gas deposits are becoming increasingly valuable. Nevertheless the rate fixed by the Commission reduces that value. And that reduction, it is said, has severe repercussions on the economy of the State. It is argued in the first place that as a result of this rate reduction Hope's West Virginia property taxes may be decreased in view of the relevance which earnings have under West Virginia law in the assessment of property for tax purposes.[14] Secondly, it is pointed out that West Virginia has a production tax[15] on the "value" of the gas exported from the State. And we are told that for purposes of that tax "value" becomes under West Virginia law "practically the substantial equivalent of market value." Thus West Virginia argues that undervaluation of Hope's gas leaseholds will cost the State many thousands of dollars in taxes. The effect, it is urged, is to impair West Virginia's tax structure for the benefit of Ohio and Pennsylvania consumers. West Virginia emphasizes, moreover, its deep interest in the conservation of its natural resources including its natural gas. It says that a reduction of the value of these leasehold values will jeopardize these conservation policies in three respects: (1) exploratory development of new fields will be discouraged; (2) abandonment of low-yield high-cost marginal wells will be hastened;

[13] See Simonton, The Nature of the Interest of the Grantee Under an Oil and Gas Lease (1918), 25 W. Va. L. Quar. 295.

[14] West Penn Power Co. v. Board of Review, 112 W. Va. 442.

[15] W. Va. Rev. Code of 1943, ch. 11, Art. 13, §§ 2a, 3a.

and (3) secondary recovery of oil will be hampered. Furthermore, West Virginia contends that the reduced valuation will harm one of the great industries of the State and that harm to that industry must inevitably affect the welfare of the citizens of the State. It is also pointed out that West Virginia has a large interest in coal and oil as well as in gas and that these forms of fuel are competitive. When the price of gas is materially cheapened, consumers turn to that fuel in preference to the others. As a result this lowering of the price of natural gas will have the effect of depreciating the price of West Virginia coal and oil.

West Virginia insists that in neglecting this aspect of the problem the Commission failed to perform the function which Congress entrusted to it and that the case should be remanded to the Commission for a modification of its order.[16]

We have considered these contentions at length in view of the earnestness with which they have been urged upon us. We have searched the legislative history of the Natural Gas Act for any indication that Congress entrusted to the Commission the various considerations which West Virginia has advanced here. And our conclusion is that Congress did not.

We pointed out in *Illinois Natural Gas Co.* v. *Public Service Co.*, 314 U. S. 498, 506, that the purpose of the Natural Gas Act was to provide, "through the exercise of the national power over interstate commerce, an agency for regulating the wholesale distribution to public service companies of natural gas moving interstate, which this Court had declared to be interstate commerce not subject to certain types of state regulation." As stated in the House Report the "basic purpose" of this legislation was "to occupy" the field in which such cases as *Missouri* v. *Kansas Gas Co.*, 265 U. S. 298, and *Public Utilities Commission* v. *Attleboro Steam & Electric Co.*, 273 U. S. 83, had held the States might not act. H. Rep. No. 709, 75th Cong., 1st Sess., p. 2. In accomplishing that purpose the bill was designed to take "no authority from State commissions" and was "so drawn as to complement and in no manner usurp State regulatory authority." *Id.*, p. 2. And the Federal Power Commission was given no authority over the "production or gathering of natural gas." § 1(b).

[16] West Virginia suggests as a possible solution (1) that a "going concern value" of the company's tangible assets be included in the rate base and (2) that the fair market value of gas delivered to customers be added to the outlay for operating expenses and taxes.

The primary aim of this legislation was to protect consumers against exploitation at the hands of natural gas companies. Due to the hiatus in regulation which resulted from the *Kansas Gas Co.* case and related decisions state commissions found it difficult or impossible to discover what it cost interstate pipe-line companies to deliver gas within the consuming states; and thus they were thwarted in local regulation. H. Rep., No. 709, *supra*, p. 3. Moreover, the investigations of the Federal Trade Commission had disclosed that the majority of the pipe-line mileage in the country used to transport natural gas, together with an increasing percentage of the natural gas supply for pipe-line transportation, had been acquired by a handful of holding companies.[17] State commissions, independent producers, and communities having or seeking the service were growing quite helpless against these combinations.[18] These were the types of problems with which those participating in the hearings were pre-occupied.[19] Congress addressed itself to those specific evils.

The Federal Power Commission was given broad powers of regulation. The fixing of "just and reasonable" rates (§ 4) with the powers attendant thereto[20] was the heart of the new regulatory system. Moreover, the Commission was given certain authority by § 7(a), on a finding that the action was necessary or desirable "in the public interest," to require natural gas companies to extend or improve their transportation facilities and to sell gas to any authorized local distributor. By § 7(b) it was given control over the abandonment of facilities or of service. And by § 7(c), as originally enacted, no natural gas company could undertake the construction or extension of any facilities for the transportation of natural gas to a market in which natural gas was already being served by another company, or sell any natural gas in such a market, without obtaining a certificate of public convenience and necessity from the Commission. In passing on such applications for

[17] S. Doc. 92, Pt. 84-A, ch. XII, Final Report, Federal Trade Commission to the Senate pursuant to S. Res. No. 83, 70th Cong., 1st Sess.

[18] S. Doc. 92, Pt. 84-A, chs. XII, XIII, *op. cit., supra*, note 17.

[19] See Hearings on H. R. 11662, Subcommittee of House Committee on Interstate & Foreign Commerce, 74th Cong., 2d Sess.; Hearings on H. R. 4008, House Committee on Interstate & Foreign Commerce, 75th Cong., 1st Sess.

[20] The power to investigate and ascertain the "actual legitimate cost" of property (§ 6), the requirement as to books and records (§ 8), control over rates of depreciation (§ 9), the requirements for periodic and special reports (§ 10), the broad powers of investigation (§ 14) are among the chief powers supporting the rate making function.

certificates of convenience and necessity the Commission was told by § 7(c); as originally enacted, that it was "the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use at the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest." The latter provision was deleted from § 7(c) when that subsection was amended by the Act of February 7, 1942, 56 Stat. 83. By that amendment limited grandfather rights were granted companies desiring to extend their facilities and services over the routes or within the area which they were already serving. Moreover, § 7(c) was broadened so as to require certificates of public convenience and necessity not only where the extensions were being made to markets in which natural gas was already being sold by another company but in other situations as well.

These provisions were plainly designed to protect the consumer interests against exploitation at the hands of private natural gas companies. When it comes to cases of abandonment or of extensions of facilities or service, we may assume that, apart from the express exemptions[21] contained in § 7, considerations of conservation are material to the issuance of certificates of public convenience and necessity. But the Commission was not asked here for a certificate of public convenience and necessity under § 7 for any proposed construction or extension. It was faced with a determination of the amount which a private operator should be allowed to earn from the sale of natural gas across state lines through an established distribution system. Secs. 4 and 5, not § 7, provide the standards for that determination. We cannot find in the words of the Act or in its history the slightest intimation or suggestion that the exploitation of consumers by private operators through the maintenance of high rates should be allowed to continue provided the producing states obtain indirect benefits from it. That apparently was the Commission's view of the matter, for the same arguments advanced here were presented to the Commission and not adopted by it.

We do not mean to suggest that Congress was unmindful of the interests of the producing states in their natural gas supplies

[21] Apart from the grandfather clause contained in § 7(c), there is the provision of § 7(f) that a natural gas company may enlarge or extend its facilities within the "service area" determined by the Commission without any further authorization.

when it drafted the Natural Gas Act. As we have said, the Act does not intrude on the domain traditionally reserved for control by state commissions; and the Federal Power Commission was given no authority over "the production or gathering of natural gas." § 1(b). In addition, Congress recognized the legitimate interests of the States in the conservation of natural gas. By § 11 Congress instructed the Commission to make reports on compacts between two or more States dealing with the conservation, production and transportation of natural gas.[22] The Commission was also directed to recommend further legislation appropriate or necessary to carry out any proposed compact and "to aid in the conservation of natural-gas resources within the United States and in the orderly, equitable, and economic production, transportation, and distribution of natural gas." § 11(a). Thus Congress was quite aware of the interests of the producing states in their natural gas supplies.[23] But it left the protection of those interests to measures other than the maintenance of high rates to private companies. If the Commission is to be compelled to let the stockholders of natural gas companies have a feast so that the

---

[22] See P. L. 117, approved July 7, 1943, containing an "Interstate Compact to Conserve Oil and Gas" between Oklahoma, Texas, New Mexico, Illinois, Colorado, and Kansas.

[23] As we have pointed out, § 7(c) was amended by the Act of February 7, 1942 (56 Stat. 83) so as to require certificates of public convenience and necessity not only where the extensions were being made to markets in which natural gas was already being sold by another company but to other situations as well. Considerations of conservation entered into the proposal to give the Act that broader scope. H. Rep. No. 1290, 77th Cong., 1st Sess., pp. 2-3. And see Annual Report, Federal Power Commission (1940) pp. 79, 80; Baum, The Federal Power Commission and State Utility Regulation (1942), p. 261.

The bill amending § 7(c) originally contained a subsection (h) reading as follows: "Nothing contained in this section shall be construed to affect the authority of a State within which natural gas is produced to authorize or require the construction or extension of facilities for the transportation and sale of such gas within such State: Provided, however, That the Commission, after a hearing upon complaint or upon its own motion, may by order forbid any intrastate construction or extension by any natural-gas company which it shall find will prevent such company from rendering adequate service to its customers in interstate or foreign commerce in territory already being served." See Hearings on H. R. 5249, House Committee on Interstate & Foreign Commerce, 77th Cong., 1st Sess., pp. 7, 11, 21, 29, 32-33. In explanation of its deletion the House Committee Report stated, pp. 4-5: "The increasingly important problems raised by the desire of several States to regulate the use of the natural gas produced therein in the interest of consumers within such States, as against the Federal power to regulate interstate commerce in the interest of both interstate and intrastate consumers, are deemed by the committee to warrant further intensive study and probably a more detailed and comprehensive plan for the handling thereof than that which would have been provided by the stricken subsection."

producing states may receive crumbs from that table, the present Act must be redesigned. Such a project raises questions of policy which go beyond our province.

It is hardly necessary to add that a limitation on the net earnings of a natural gas company from its interstate business is not a limitation on the power of the producing state either to safeguard its tax revenues from that industry[24] or to protect the interests of those who sell their gas to the interstate operator.[25] The return which the Commission allowed was the net return after all such charges.

It is suggested that the Commission has failed to perform its duty under the Act in that it has not allowed a return for gas production that will be enough to induce private enterprise to perform completely and efficiently its functions for the public. The Commission, however, was not oblivious of those matters. It considered them. It allowed, for example, delay rentals and exploration and development costs in operating expenses.[26] No serious attempt has been made here to show that they are inadequate. We certainly cannot say that they are, unless we are to substitute our opinions for the expert judgment of the administrators to whom Congress entrusted the decision. Moreover, if in light of experience they turn out to be inadequate for development of new sources of supply, the doors of the Commission are open for increased allowances. This is not an order for all time. The Act contains machinery for obtaining rate adjustments. § 4.

---

[24] We have noted that in the annual operating expenses of some $16,000,000 the Commission included West Virginia and federal taxes. And in the net increase of $421,160 over 1940 operating expenses allowed by the Commission was some $80,000 for increased West Virginia property taxes. The adequacy of these amounts has not been challenged here.

[25] The Commission included in the aggregate annual operating expenses which it allowed some $8,500,000 for gas purchased. It also allowed about $1,400,000 for natural gas production and about $600,000 for exploration and development.

It is suggested, however, that the Commission in ascertaining the cost of Hope's natural gas production plant proceeded contrary to § 1(b) which provides that the Act shall not apply to "the production or gathering of natural gas". But such valuation, like the provisions for operating expenses, is essential to the rate-making function as customarily performed in this country. Cf. Smith, The Control of Power Rates in the United States and England (1932), 159 The Annals 101. Indeed § 14(b) of the Act gives the Commission the power to "determine the propriety and reasonableness of the inclusion in operating expenses, capital, or surplus of all delay rentals or other forms of rental or compensation for unoperated lands and leases."

[26] See note 25, *supra*.

But it is said that the Commission placed too low a rate on gas for industrial purposes as compared with gas for domestic purposes and that industrial uses should be discouraged. It should be noted in the first place that the rates which the Commission has fixed are Hope's interstate wholesale rates to distributors not interstate rates to industrial users[27] and domestic consumers. We hardly can assume, in view of the history of the Act and its provisions, that the resales intrastate by the customer companies which distribute the gas to ultimate consumers in Ohio and Pennsylvania are subject to the rate-making powers of the Commission.[28] But in any event those rates are not in issue here. Moreover, we fail to find in the power to fix "just and reasonable" rates the power to fix rates which will disallow or discourage resales for industrial use. The Committee Report stated that the Act provided "for regulation along recognized and more or less standardized lines" and that there was "nothing novel in its provisions". H. Rep. No. 709, *supra*, p. 3. Yet if we are now to tell the Commission to fix the rates so as to discourage particular uses, we would indeed be injecting into a rate case a "novel" doctrine which has no express statutory sanction. The same would be true if we were to hold that the wasting-asset nature of the industry required the maintenance of the level of rates so that natural gas companies could make a greater profit on each unit of gas sold. Such theories of rate-making for this industry may or may not be desirable. The difficulty is that § 4(a) and § 5(a) contain only the conventional standards of rate-making for natural gas companies.[29] The Act of February 7, 1942, by broadening § 7 gave

[27] The Commission has expressed doubts over its power to fix rates on "direct sales to industries" from interstate pipelines as distinguished from "sales for resale to the industrial customers of distributing companies." Annual Report, Federal Power Commission (1940), p. 11.

[28] Sec. 1(b) of the Act provides: "The provisions of this Act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas." And see § 2(6), defining a "natural-gas company", and H. Rep. No. 709, *supra*, pp. 2, 3.

[29] The wasting-asset characteristic of the industry was recognized prior to to the Act as requiring the inclusion of a depletion allowance among operating expenses. See Columbus Gas & Fuel Co. v. Public Utilities Commission, 292 U. S. 398, 404-405. But no such theory of rate-making for natural gas companies as is now suggested emerged from the cases arising during the earlier period of regulation.

the Commission some additional authority to deal with the conservation aspects of the problem.[30] But § 4(a) and § 5(a) were not changed. If the standard of "just and reasonable" is to sanction the maintenance of high rates by a natural gas company because they restrict the use of natural gas for certain purposes, the Act must be further amended.

It is finally suggested that the rates charged by Hope are discriminatory as against domestic users and in favor of industrial users. That charge is apparently based on § 4(b) of the Act which forbids natural gas companies from maintaining "any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service." The power of the Commission to eliminate any such unreasonable differences or discriminations is plain. § 5(a). The Commission, however, made no findings under § 4(b). Its failure in that regard was not challenged in the petition to review. And it has not been raised or argued here by any party. Hence the problem of discrimination has no proper place in the present decision. It will be time enough to pass on that issue when it is presented to us. Congress has entrusted the administration of the Act to the Commission not to the courts. Apart from the requirements of judicial review it is not for us to advise the Commission how to discharge its functions.

*Findings as to the Lawfulness of Past Rates.* As we have noted, the Commission made certain findings as to the lawfulness of past rates which Hope had charged its interstate customers. Those findings were made on the complaint of the City of Cleveland and in aid of state regulation. It is conceded that under the Act the Commission has no power to make reparation orders. And its power to fix rates admittedly is limited to those "to be thereafter observed and in force." § 5(a). But the Commission maintains that it has the power to make findings as to the lawful-

[30] The Commission has been alert to the problems of conservation in its administration of the Act. It has indeed suggested that it might be wise to restrict the use of natural gas "by functions rather than by areas." Annual Report (1940) p. 79.

The Commission stated in that connection that natural gas was particularly adapted to certain industrial uses. But it added that the general use of such gas "under boilers for the production of steam" is "under most circumstances of very questionable social economy." *Ibid.*

ness of past rates even though it has no power to fix those rates.[31] However that may be, we do not think that these findings were reviewable under § 19(b) of the Act. That section gives any party "aggrieved by an order" of the Commission a review "of such order" in the circuit court of appeals for the circuit where the natural gas company is located or has its principal place of business or in the United States Court of Appeals for the District of Columbia. We do not think that the findings in question fall within that category.

The Court recently summarized the various types of administrative action or determination reviewable as orders under the Urgent Deficiencies Act of October 22, 1913, 28 U. S. C. §§ 45, 47a, and kindred statutory provisions. *Rochester Tel. Corp.* v. *United States*, 307 U. S. 125. It was there pointed out that where "the order sought to be reviewed does not of itself adversely affect complainant but only affects his rights adversely on the contingency of future administrative action", it is not reviewable. *Id.*, p. 130. The Court said, "In view of traditional conceptions of federal judicial power, resort to the courts in these situations is either premature or wholly beyond their province." *Id.*, p. 130. And see *United States* v. *Los Angeles & S. L. R. Co.*, 273 U. S. 299, 309, 310; *Shannahan* v. *United States*, 303 U. S. 596. These considerations are apposite here. The Commission has no authority to enforce these findings. They are "the exercise solely of the function of investigation." *United States* v. *Los Angeles & S. L. R. Co.*, *supra*, p. 310. They are only a preliminary, interim step towards possible future action—action not by the Commission but by wholly independent agencies. The outcome of those proceedings may turn on factors other than these findings. These findings may never result in the respondent feeling the pinch of administrative action.

*Reversed.*

Mr. Justice ROBERTS took no part in the consideration or decision of this case.

---

[31] The argument is that § 4(a) makes "unlawful" the charging of any rate that is not just and reasonable. And § 14(a) gives the Commission power to investigate any matter "which it may find necessary or proper in order to determine whether any person has violated" any provision of the Act. Moreover, § 5(b) gives the Commission power to investigate and determine the cost of production or transportation of natural gas in cases where it has "no authority to establish a rate governing the transportation or sale of such natural gas." And § 17(c) directs the Commission "to make available to the several State commissions such information and reports as may be of assistance in State regulation of natural-gas companies." For a discussion of these points by the Commission see 44 P. U. R. (N. S.) pp. 34-35.

[January 3, 1944.]

Opinion of Mr. Justice Black and Mr. Justice Murphy.

We agree with the Court's opinion and would add nothing to what has been said but for what is patently a wholly gratuitous assertion as to Constitutional law in the dissent of Mr. Justice Frankfurter. We refer to the statement that "Congressional acquiescence to date in the doctrine of *Chicago, etc., Railway Co.* v. *Minnesota, supra*, may fairly be claimed." That was the case in which a majority of this Court was finally induced to expand the meaning of "due process" so as to give courts power to block efforts of the state and national governments to regulate economic affairs. The present case does not afford a proper occasion to discuss the soundness of that doctrine because, as stated in Mr. Justice Frankfurter's dissent, "That issue is not here in controversy." The salutary practice whereby courts do not discuss issues in the abstract applies with peculiar force to Constitutional questions. Since, however, the dissent adverts to a highly controversial due process doctrine and implies its acceptance by Congress, we feel compelled to say that we do not understand that Congress voluntarily has acquiesced in a Constitutional principle of government that courts, rather than legislative bodies, possess final authority over regulation of economic affairs. Even this Court has not always fully embraced that principle, and we wish to repeat that we have never acquiesced in it, and do not now. See *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 599-601.

[January 3, 1944.]

Mr. Justice Reed, dissenting.

This case involves the problem of rate making under the Natural Gas Act. Added importance arises from the obvious fact that the principles stated are generally applicable to all federal agencies which are entrusted with the determination of rates for utilities. Because my views differ somewhat from those of my brethren, it may be of some value to set them out in a summary form.

The Congress may fix utility rates in situations subject to federal control without regard to any standard except the constitutional standards of due process and for taking private property for public use without just compensation. *Wilson* v. *New*, 243 U. S. 332, 350. A Commission, however, does not have this freedom of action. Its powers are limited not only by the constitutional standards but also by the standards of the delegation. Here the standard added by the Natural Gas Act is that the rate be "just and reasonable."[1] Section 6[2] throws additional light on the meaning of these words.

[1] Natural Gas Act, § 4(a), 52 Stat. 821, 822, 15 U. S. C. § 717(a).

[2] 52 Stat. 821, 824, 15 U. S. C. § 717e:

"(a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear

When the phrase was used by Congress to describe allowable rates, it had relation to something ascertainable. The rates were not left to the whim of the Commission. The rates fixed would produce an annual return and that annual return was to be compared with a theoretical just and reasonable return, all risks considered, on the fair value of the property used and useful in the public service at the time of the determination.

Such an abstract test is not precise. The agency charged with its determination has a wide range before it could properly be said by a court that the agency had disregarded statutory standards or had confiscated the property of the utility for public use. Cf. *Chicago, M. & St. P. Ry.* v. *Minnesota*, 134 U. S. 418, 461-66, dissent. This is as Congress intends. Rates are left to an experienced agency particularly competent by training to appraise the amount required.

The decision as to a reasonable return had not been a source of great difficulty, for borrowers and lenders reached such agreements daily in a multitude of situations; and although the determination of fair value had been troublesome, its essentials had been worked out in fairness to investor and consumer by the time of the enactment of this Act. Cf. *Los Angeles G. & E. Corp.* v. *Railroad Com.*, 289 U. S. 287, 304 *et seq.* The results were well known to Congress and had that body desired to depart from the traditional concepts of fair value and earnings, it would have stated its intention plainly. *Helvering* v. *Griffiths*, 318 U. S. 371.

It was already clear that when rates are in dispute, "earnings produced by rates do not afford a standard for decision." 289 U. S. at 305. Historical cost, prudent investment and reproduction cost[3] were all relevant factors in determining fair value. In-

---

on the determination of such cost or depreciation and the fair value of such property.

"(b) Every natural-gas company upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction."

[3] "Reproduction cost" has been variously defined, but for rate making purposes the most useful sense seems to be, the minimum amount necessary to create at the time of the inquiry a modern plant capable of rendering equivalent service. See I Bonbright, Valuation of Property (1937) 152. Reproduction cost as the cost of building a replica of an obsolescent plant is not of real significance.

"Prudent investment" is not defined by the Court. It may mean the sum originally put in the enterprise, either with or without additional amounts from excess earnings reinvested in the business.

deed, disregarding the pioneer investor's risk, if prudent investment and reproduction cost were not distorted by changes in price levels or technology, each of them would produce the same result. The realization from the risk of an investment in a speculative field, such as natural gas utilities, should be reflected in the present fair value.[4] amount of evidence to be admitted on any point was of course in the agency's reasonable discretion, and it was free to give its own weight to these or other factors and to determine from all the evidence its own judgment as to the necessary rates.

I agree with the Court in not imposing a rule of prudent investment alone in determining the rate base. This leaves the Commission free, as I understand it, to use any available evidence for its finding of fair value, including both prudent investment and the cost of installing at the present time an efficient system for furnishing the needed utility service.

My disagreement with the Court arises primarily from its view that it makes no difference how the Commission reached the rate fixed so long as the result is fair and reasonable. For me the statutory command to the Commission is more explicit. Entirely aside from the constitutional problem of whether the Congress could validly delegate its rate making power to the Commission, *in toto* and without standards, it did legislate in the light of the relation of fair and reasonable to fair value and reasonable return. The Commission must therefore make its findings in observance of that relationship.

The Federal Power Commission did not, as I construe their action, disregard its statutory duty. They heard the evidence relating to historical and reproduction cost and to the reasonable rate of return, and they appraised its weight. The evidence of reproduction cost was rejected as unpersuasive, but from the other evidence they found a rate base, which is to me a determination of fair value. On that base the earnings allowed seem fair and reasonable. So far as the Commission went in appraising the property employed in the service, I find nothing in the result

[4] It is of no more than bookkeeping significance whether the Commission allows a rate of return commensurate with the risk of the original investment or the lower rate based on current risk and a capitalization reflecting the established earning power of a successful company and the probable cost of duplicating its services. Cf. A. T. & T. v. United States, 299 U. S. 232. But the latter is the traditional method.

which indicates confiscation, unfairness or unreasonableness. Good administration of rate making agencies under this method would avoid undue delay and render revaluations unnecessary except after violent fluctuations of price levels. Rate making under this method has been subjected to criticism. But until Congress changes the standards for the agencies, these rate making bodies should continue the conventional theory of rate making. It will probably be simpler to improve present methods than to devise new ones.

But a major error, I think, was committed in the disregard by the Commission of the investment in exploratory operations and other recognized capital costs. These were not considered by the Commission because they were charged to operating expenses by the company at a time when it was unregulated. Congress did not direct the Commission in rate making to deduct from the rate base capital investment which had been recovered during the unregulated period through excess earnings. In my view this part of the investment should no more have been disregarded in the rate base than any other capital investment which previously had been recovered and paid out in dividends or placed to surplus. Even if prudent investment throughout the life of the property is accepted as the formula for figuring the rate base, it seems to me illogical to throw out the admittedly prudent cost of part of the property because the earnings in the unregulated period had been sufficient to return the prudent cost to the investors over and above a reasonable return. What would the answer be under the theory of the Commission and the Court, if the only prudent investment in this utility had been the seventeen million capital charges which are now disallowed?

For the reasons heretofore stated, I should affirm the action of the Circuit Court of Appeals in returning the proceeding to the Commission for further consideration and should direct the Commission to accept the disallowed capital investment in determining the fair value for rate making purposes.

[January 3, 1944.]

Mr. Justice Frankfurter, dissenting.

My brother Jackson has analyzed with particularity the economic and social aspects of natural gas as well as the difficulties which led to the enactment of the Natural Gas Act, especially those arising out of the abortive attempts of States to regulate natural gas utilities. The Natural Gas Act of 1938 should receive application in the light of this analysis, and Mr. Justice Jackson has, I believe, drawn relevant inferences regarding the duty of the Federal Power Commission in fixing natural gas rates. His exposition seems to me unanswered, and I shall say only a few words to emphasize my basic agreement with him.

For our society the needs that are met by public utilities are as truly public services as the traditional governmental functions of police and justice. They are not less so when these services are rendered by private enterprise under governmental regulation. Who ultimately determines the ways of regulation, is the decisive aspect in the public supervision of privately-owned utilities. Foreshadowed nearly sixty years ago, *Railroad Commission Cases*, 116 U. S. 307, 331, it was decided more than fifty years ago that the final say under the Constitution lies with the judiciary and not the legislature. *Chicago etc. Railway Co.* v. *Minnesota*, 134 U. S. 418.

While legal issues touching the proper distribution of governmental powers under the Constitution may always be raised, Congressional acquiescence to date in the doctrine of *Chicago etc. Railway Co.* v. *Minnesota, supra,* may fairly be claimed. But in any event that issue is not here in controversy. As pointed out in the opinions of my brethren, Congress has given only limited authority to the Federal Power Commission and made the exercise of that authority subject to judicial review. The Commission is authorized to fix rates chargeable for natural gas. But the rates that it can fix must be "just and reasonable". § 5 of the Natural Gas Act, 15 U. S. C. § 717(d). Instead of making the Commission's rate determinations final, Congress specifically provided for court review of such orders. To be sure, "the finding of the Commission as to the facts, if supported by substantial evidence" was made "conclusive"; § 19 of the Act, 15 U. S. C. § 717r. But obedience of the requirement of Congress that rates be "just and reasonable" is not an issue of fact of which the Commission's own determination is conclusive. Otherwise, there would be nothing for a court to review except questions of compliance with the procedural provisions of the Natural Gas Act. Congress might have seen fit so to cast its legislation. But it has not done so. It has committed to the administration of the Federal Power Commission the duty of applying standards of fair dealing and of reasonableness relevant to the purposes expressed by the Natural Gas Act. The requirement that rates must be "just and reasonable" means just and reasonable in relation to appropriate standards. Otherwise Congress would have directed the Commission to fix such rates as in the judgment of the Commission are just and reasonable; it would not have also provided that such determinations by the Commission are subject to court review.

To what sources then are the Commission and the courts to go for ascertaining the standards relevant to the regulation of natural gas rates? It is at this point that Mr. Justice JACKSON's analysis seems to me pertinent. There appear to be two alternatives. Either the fixing of natural gas rates must be left to the unguided discretion of the Commission so long as the rates it fixes do not reveal a glaringly bad prophecy of the ability of a regulated utility to continue its service in the future. Or the Commission's rate orders must be founded on due consideration of all

the elements of the public interest which the production and distribution of natural gas involve just because it is natural gas. These elements are reflected in the Natural Gas Act, if that Act be applied as an entirety. See, for instance, §§ 4(a)(b)(c)(d), 6, and 11, 15 U. S. C. § 717c (a)(b)(c)(d), 717e, and 717j. Of course the statute is not concerned with abstract theories of rate-making. But its very foundation is the "public interest", and the public interest is a texture of multiple strands. It includes more than contemporary investors and contemporary consumers. The needs to be served are not restricted to immediacy, and social as well as economic costs must be counted.

It will not do to say that it must all be left to the skill of experts. Expertise is a rational process and a rational process implies ~~articulation of~~ expressed reasons for judgment. It will little advance the public interest to substitute for the hodge-podge of the rule in *Smyth* v. *Ames*, 169 U. S. 466, an encouragement of conscious obscurity or confusion in reaching a result, on the assumption that so long as the result appears harmless its basis is irrelevant. That may be an appropriate attitude when state action is challenged as unconstitutional. Cf. *Driscoll* v. *Edison Co.*, 307 U. S. 104. But it is not to be assumed that it was the design of Congress to make the accommodation of the conflicting interests exposed in Mr. Justice JACKSON's opinion the occasion for a blind clash of forces or a partial assessment of relevant factors, either before the Commission or here.

The objection to the Commission's action is not that the rates it granted were too low but that the range of its vision was too narrow. And since the issues before the Commission involved no less than the total public interest, the proceedings before it should not be judged by narrow conceptions of common law pleading. And so I conclude that the case should be returned to the Commission. In order to enable this Court to discharge its duty of reviewing the Commission's order, the Commission should set forth with explicitness the criteria by which it is guided in determining that rates are "just and reasonable", and it should determine the public interest that is in its keeping in the perspective of the considerations set forth by Mr. Justice JACKSON.

# SUPREME COURT OF THE UNITED STATES.

Nos. 34, 35.—October Term, 1943.

Federal Power Commission, City of Akron and Pennsylvania Public Utility Commission, Petitioners,
34 *vs.*
Hope Natural Gas Company.

City of Cleveland, Petitioner,
35 *vs.*
Hope Natural Gas Company.

On Writs of Certiorari to the United States Circuit Court of Appeals for the Fourth Circuit.

[January 3, 1944.]

By Mr. Justice Jackson.

Certainly the theory of the court below that ties rate-making to the fair-value-reproduction-cost formula should be overruled as in conflict with *Federal Power Commission* v. *Natural Gas Pipeline Co.*[1] But the case should, I think, be the occasion for reconsideration of our rate-making doctrine as applied to natural gas and should be returned to the Commission for further consideration in the light thereof.

The Commission appears to have understood the effect of the two opinions in the *Pipeline* case to be at least authority and perhaps direction to fix natural gas rates by exclusive application of the "prudent investment" rate base theory. This has no warrant in the opinion of the Chief Justice for the Court, however, which released the Commission from subservience to "any single formula or combination of formulas" provided its order, "viewed in its entirety, produces no arbitrary result." 315 U. S. at 586. The minority opinion I understood to advocate the "prudent investment" theory as a sufficient guide in a natural gas case. The view was expressed in the court below that since this opinion was not expressly controverted it must have been approved.[2] I dis-

1 315 U. S. 575.

2 Judge Dobie, dissenting below, pointed out that the majority opinion in the *Pipeline* case "contains no express discussion of the Prudent Investment Theory" and that the concurring opinion contained a clear one, and said, "It

claim this imputed approval with some particularity, because I attach importance at the very beginning of federal regulation of the natural gas industry to approaching it as the performance of economic functions, not as the performance of legalistic rituals.

## I.

Solutions of these cases must consider eccentricities of the industry which gives rise to them and also to the Act of Congress by which they are governed.

The heart of this problem is the elusive, exhaustible, and irreplaceable nature of natural gas itself. Given sufficient money, we can produce any desired amount of railroad, bus, or steamship transportation, or communications facilities, or capacity for generation of electric energy, or for the manufacture of gas of a kind. In the service of such utilities one customer has little concern with the amount taken by another, one's waste will not deprive another, a volume of service can be created equal to demand, and today's demands will not exhaust or lessen capacity to serve tomorrow. But the wealth of Midas and the wit of man cannot produce or reproduce a natural gas field. We cannot even reproduce the gas, for our manufactured product has only about half the heating value per unit of nature's own.[3]

Natural gas in some quantity is produced in twenty-four states. It is consumed in only thirty-five states, and is available only to about 7,600,000 consumers.[4] Its availability has been more localized than that of any other utility service becauase it has depended more on the caprice of nature.

The supply of the Hope Company is drawn from that old and rich and vanishing field that flanks the Appalachian mountains. Its center of production is Pennsylvania and West Virginia, with a fringe of lesser production in New York, Ohio, Kentucky, Ten-

is difficult for me to believe that the majority of the Supreme Court, believing otherwise, would leave such a statement unchallenged." The fact that two other Justices had as matter of record in our books long opposed the reproduction cost theory of rate bases and had commented favorably on the prudent investment theory may have influenced that conclusion. See opinion of Mr. Justice Frankfurter in Driscoll v. Edison Light & Power Co., 307 U. S. 104, 122, and my brief as Solicitor General in that case. It should be noted, however, that these statements were made, not in a natural gas case, but in an electric power case—a very important distinction, as I shall try to make plain.

[3] Natural gas from the Appalachian field averages about 1050 to 1150 B.T.U. content, while by-product manufactured gas is about 530 to 540. Moody's Manual of Public Utilities (1943) 1350; Youngberg, Natural Gas (1930) 7.

[4] Sen. Rep. No. 1162, 75th Cong., 1st Sess., 2.

nessee, and the north end of Alabama. Oil was discovered in commercial quantities at a depth of only 69½ feet near Titusville, Pennsylvania, in 1859. Its value then was about $16 per barrel.[5] The oil branch of the petroleum industry went forward at once, and with unprecedented speed. The area productive of oil and gas was roughed out by the drilling of over 19,000 "wildcat" wells, estimated to have cost over $222,000,000. Of these, over 18,000, or 94.9 per cent, were "dry holes." About five per cent, or 990 wells, made discoveries of commercial importance, 767 of them resulting chiefly in oil and [redacted] in gas only.[6] Prospecting for many years was a search for oil, and to strike gas was a misfortune. Waste during this period and even later is appalling. Gas was regarded as having no commercial value until about 1882, in which year the total yield was valued only at about $75,000.[7] Since then, contrary to oil, which has become cheaper, gas in this field has pretty steadily advanced in price.

223

While for many years natural gas had been distributed on a small scale for lighting,[8] its acceptance was slow, facilities for its utilization were primitive, and not until 1885 did it take on the appearance of a substantial industry.[9] Soon monopoly of production or markets developed.[10] To get gas from the mountain country, where it was largely found, to centers of population, where it was in demand, required very large investment. By ownership of such facilities a few corporate systems, each including several companies, controlled access to markets. Their purchases became the dominating factor in giving a market value to gas produced by many small operators. Hope is the market for over 300 such operators. By 1928 natural gas in the Appalachian field

[6] *Id.* at 62-63.

[7] *Id.* at 61.

[8] At Fredonia, New York, in 1821, natural gas was conveyed from a shallow well to some thirty people. The lighthouse at Barcelona Harbor, near what is now Westfield, New York, was at about that time and for many years afterward lighted by gas that issued from a crevice. Report on Utility Corporations by Federal Trade Commission, Sen. Doc. 92, Pt. 84-A, 70th Cong., 1st Sess., 8-9.

[9] In that year Pennsylvania enacted "An Act to provide for the incorporation and regulation of natural gas companies." Penn. Laws 1885, No. 32.

[10] See Steptoe and Hoffheimer's Memorandum for Governor Cornwell of West Virginia (1917) 25 West Virginia Law Quarterly 257; see also Report on Utility Corporations by Federal Trade Commission, Sen. Doc. No. 92, Pt. 84-A, 70th Cong., 1st Sess.

commanded an average price of 21.1 cents per m.c.f. at points of production and was bringing 45.7 cents at points of consumption.[11] The companies which controlled markets, however, did not rely on gas purchases alone. They acquired and held in fee or leasehold great acreage in territory proved by "wildcat" drilling. These large marketing system companies as well as many small independent owners and operators have carried on the commercial development of proved territory. The development risks appear from the estimate that up to 1928, 312,318 proved area wells had been sunk in the Appalachian field of which 48,962, or 15.7 per cent, failed to produce oil or gas in commercial quantity.[12]

With the source of supply thus tapped to serve centers of large demand, like Pittsburgh, Buffalo, Cleveland, Youngstown, Akron, and other industrial communities, the distribution of natural gas fast became big business. Its advantages as a fuel and its price commended it, and the business yielded a handsome return. All was merry and the goose hung high for consumers and gas companies alike until about the time of the first World War. Almost unnoticed by the consuming public, the whole Appalachian field passed its peak of production and started to decline. Pennsylvania, which to 1928 had given off about 38 per cent of the natural gas from this field, had its peak in 1905; Ohio, which had produced 14 per cent, had its peak in 1915; and West Virginia, greatest producer of all, with 45 per cent to its credit, reached its peak in 1917.[13]

Western New York and Eastern Ohio, on the fringe of the field, had some production but relied heavily on imports from Pennsylvania and West Virginia. Pennsylvania, a producing and exporting state, was a heavy consumer and supplemented her production with imports from West Virginia. West Virginia was a consuming state, but the lion's share of her production was exported. Thus the interest of the states in the North Appalachian supply was in conflict.

Competition among localities to share in the failing supply and the helplessness of state and local authorities in the presence of state lines and corporate complexities is a part of the

[12] *Id.* at 63.

[13] *Id.* at 64.

background of federal intervention in the industry.[14] West Virginia took the boldest measure. It legislated a priority in its entire production in favor of its own inhabitants. That was frustrated by an injunction from this Court.[15] Throughout the region clashes in the courts and conflicting decisions evidenced public anxiety and confusion. It was held that the New York Public Service Commission did not have power to classify consumers and restrict their use of gas.[16] That Commission held that a company could not abandon a part of its territory and still serve the rest.[17] Some courts admonished the companies to take action to protect consumers.[18] Several courts held that companies, regardless of failing supply, must continue to take on customers, but such compulsory additions were finally held to be within the Public Service Commission's discretion.[19] There were attempts to throw up franchises and quit the service, and municipalities resorted to the courts with conflicting results.[20] Public service commissions of consuming states were handicapped, for they had no control of the supply.[21]

Shortages during World War I occasioned the first intervention in the natural gas industry by the Federal Government. Under Proclamation of President Wilson the United States Fuel Admin-

[21] The New York Public Service Commission said: "While the transportation of natural gas through pipe lines from one state to another state is interstate commerce . . . , Congress has not taken over the regulation of that particular industry. Indeed, it has expressly excepted it from the operation of the Interstate Commerce Commissions Law (Interstate Commerce Commissions Law, section 1). It is quite clear, therefore, that this Commission

istrator took control, stopped extensions, classified consumers and established a priority for domestic over industrial use.[22] After the war federal control was abandoned. Some cities once served with natural gas became dependent upon a mixed gas of reduced heating value and relatively higher price.[23]

Utilization of natural gas of highest social as well as economic return is domestic use for cooking and water heating, followed closely by use for space heating in homes. This is the true public utility aspect of the enterprise, and its preservation should be the first concern of regulation. Gas does the family cooking cheaper than any other fuel.[24] But its advantages do not end with dollars and cents cost. It is delivered without interruption at the meter as needed and is paid for after it is used. No money is tied up in a supply, and no space is used for storage. It requires no handling, creates no dust, and leaves no ash. It responds to thermostatic control. It ignites easily and immeddiately develops its maximum heating capacity. These incidental advantages make domestic life more liveable.

---

can not require a Pennsylvania corporation producing gas in Pennsylvania to transport it and deliver it in the State of New York, and that the Interstate Commerce Commission is likewise powerless. If there exists such a power, and it seems that there does, it is a power vested in Congress and by it not yet exercised. There is no available source of supply for the Crystal City Company at present except through purchasing from the Potter Gas Company. It is possible that this Commission might fix a price at which the Potter Gas Company should sell if it sold at all, but as the Commission can not require it to supply gas in the State of New York, the exercise of such a power to fix the price, if such power exists, would merely say, sell at this price or keep out of the State." Lane *v.* Crystal City Gas Co., 8 New York Public Service Comm. Reports, Second District, 210, 212.

[22] Proclamation by the President of September 16, 1918; Rules and Regulations of H. A. Garfield, Fuel Administrator, September 24, 1918.

[23] For example, the Iroquois Gas Corporation which formerly served Buffalo, New York, with natural gas ranging from 1050 to 1150 b.t.u. per cu. ft., now mixes a by-product gas of between 530 and 540 b.t.u. in proportions to provide a mixed gas of about 900 b.t.u. per cu. ft. For space heating or water heating its charges range from 65 cents for the first 10 m.c.f. per month to 55 cents for all above 25 m.c.f. per month. Moody's Manual of Public Utilities (1943) 1350.

[24] The United States Fuel Administration made the following cooking value comparisons, based on tests made in the Department of Home Economics of Ohio State University:

Natural gas at 1.12 per M. is equivalent to coal at $6.50 per ton.
Natural gas at 2.00 per M. is equivalent to gasoline at 27¢ per gal.
Natural gas at 2.20 per M. is equivalent to electricity at 3¢ per k.w.h.
Natural gas at 2.40 per M. is equivalent to coal oil at 15¢ per gal.

Use and Conservation of Natural Gas, issued by U. S. Fuel Administration (1918) 5.

Industrial use is induced less by these qualities than by low cost in competition with other fuels. Of the gas exported from West Virginia by the Hope Company a very substantial part is used by industries. This wholesale use speeds exhaustion of supply and displaces other fuels. Coal miners and the coal industry, a large part of whose costs are wages, have complained of unfair competition from low-priced industrial gas produced with relatively little labor cost.[25]

Gas rate structures generally have favored industrial users. In 1932, in Ohio, the average yield on gas for domestic consumption was 62.1 cents per m.c.f. and on industrial, 38.7 In Pennsylvania, the figures were 62.9 against 31.7. West Virginia showed the least spread, domestic consumers paying 36.6 cents; and industrial, 27.7.[26] Although this spread is less than in other parts of the United States,[27] it can hardly be said to be self-justifying. It certainly is a very great factor in hastening decline of the natural gas supply.

About the time of World War I there were occasional and short-lived efforts by some hard-pressed companies to reverse this discrimination and adopt graduated rates, giving a low rate to quantities adequate for domestic use and graduating it upward to discourage industrial use.[28] These rates met opposition from industrial sources, of course, and since diminished revenues from industrial sources tended to increase the domestic price, they met little popular or commission favor. The fact is that neither the gas companies nor the consumers nor local regulatory bodies can be depended upon to conserve gas. Unless federal regulation will

---

[25] See Brief on Behalf of Legislation Imposing an Excise Tax on Natural Gas, submitted to N. R. A. by the United Mine Workers of America and the National Coal Association.

[26] Brief of National Gas Association and United Mine Workers, *supra* note 26, pp. 35, 36, compiled from Bureau of Mines Reports.

[27] From the source quoted in the preceding note the spread elsewhere is shown to be:

| *State* | *Industrial* | *Domestic* |
|---|---|---|
| Illinois | 29.2 | 1.678 |
| Louisiana | 10.4 | 59.7 |
| Oklahoma | 11.2 | 41.5 |
| Texas | 13.1 | 59.7 |
| Alabama | 17.8 | 1.227 |
| Georgia | 22.9 | 1.043 |

[28] In Corning, New York, rates were initiated by the Crystal City Gas Company as follows: 70¢ for the first 5,000 cu. ft. per month; 80¢ from 5,000 to 12,000; $1.00 for all over 12,000. The Public Service Commission rejected

take account of conservation, its efforts seem, as in this case, actually to constitute a new threat to the life of the Appalachian supply.

## II.

Congress in 1938 decided upon federal regulation of the industry. It did so after an exhaustive investigation of all aspects including failing supply and competition for the use of natural gas intensified by growing scarcity.[29] Pipelines from the Appalachian area to markets were in the control of a handful of holding company systems.[30] This created a highly concentrated control of the producers' market and of the consumers' supplies. While holding companies dominated both production and distribution they segregated those activities in separate subsidiaries,[31] the effect of which, if not the purpose, was to isolate some end of the business from the reach of any one state commission. The cost of natural

---

these rates and fixed a flat rate of 58¢ per m.c.f. Lane *v.* Crystal City Gas Co., 8 New York Public Service Comm. Reports, Second District, 210.

The Pennsylvania Gas Company (National Fuel Gas Company group) also attempted a sliding scale rate for New York consumers, net per month as follows: First 5,000 feet, 35¢; second 5,000 feet, 45¢; third 5,000 feet, 50¢; all above 15,000, 55¢. This was eventually abandoned, however. The company's present scale in Pennsylvania appears to be reversed to the following net monthly rate: first 3 m.c.f., 75¢; next 4 m.c.f., 60¢; next 8 m.c.f., 55¢; over 15 m.c.f., 50¢. Moody's Manual of Public Utilities (1943) 1350. In New York it now serves a mixed gas.

For a study of effect of sliding scale rates in reducing consumption see 11 Proceedings of Natural Gas Association of America (1919) 287.

[29] See Report on Utility Corporations by Federal Trade Commission, Sen. Doc. 92, Pt. 84-A, 70th Cong., 1st Sess.

[30] Four holding company systems control over 55 per cent of all natural gas transmission lines in the United States. They are Columbia Gas and Electric Corporation, Cities Service Co., Electric Bond and Share Co., and Standard Oil Co. of New Jersey. Columbia alone controls nearly 25 per cent, and fifteen companies account for over 80 per cent of the total. Report on Utility Corporations by Federal Trade Commission, Sen Doc. 92, Pt. 84-A, 70th Cong., 1st Sess., 28.

In 1915, so it was reported to the Governor of West Virginia, 87 per cent of the total gas production of that state was under control of eight companies. Steptoe and Hoffheimer, Legislative Regulation of Natural Gas Supply in West Virginia, 17 West Virginia Law Quarterly 257, 260. Of these, three were subsidiaries of the Columbia system and others were subsidiaries of larger systems. In view of inter-system sales and interlocking interests it may be doubted whether there is much real competition among these companies.

[31] This pattern with its effects on local regulatory efforts will be observed in our decisions. See United Fuel Gas Co. *v.* Railroad Commission, 278 U. S. 300; United Fuel Gas Co. *v.* Public Service Commission, 278 U. S. 322; Dayton Power & Light *v.* Public Utilities Commission, 292 U. S. 290; Columbus Gas & Fuel Co. *v.* Public Utilities Commission, 292 U. S. 398, and the present case.

gas to consumers moved steadily upwards over the years, out of proportion to prices of oil, which, except for the element of competition, is produced under somewhat comparable conditions. The public came to feel that the companies were exploiting the growing scarcity of local gas. The problems of this region had much to do with creating the demand for federal regulation.

The Natural Gas Act declared the natural gas business to be "affected with a *public interest,*" and its regulation "necessary in the *public interest.*"[32] Originally, and at the time this proceeding was commenced and tried, it also declared "the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial or any other use at the lowest possible reasonable rate *consistent with the maintenance of adequate service in the public interest.*"[33] While this was later dropped, there is nothing to indicate that it was not and is not still an accurate statement of purpose of the Act. Extension or improvement of facilities may be ordered when "necessary or desirable in the public interest," abandonment of facilities may be ordered when the supply is "depleted to the extent that the continuance of service is unwarranted, or that the *present or future public convenience or necessity* permit" abandonment and certain extensions can only be made on finding of "the *present or future* convenience and necessity."[34] The Commission is required to take account of the ultimate use of the gas. Thus it is given power to suspend new schedules as to rates, charges, and classification of services except where the schedules are for the sale of gas "for resale for industrial use only,"[35] which gives the companies greater freedom to increase rates on industrial gas than on domestic gas. More particularly, the Act expressly forbids any undue preference or advantage to any person or "*any unreasonable difference in rates* . . . either as between localities *or as between classes of service.*"[36] And the power of the Commission expressly includes that to determine the "just and reasonable *rate, charge, classification, rule, regulation, practice or contract* to be thereafter observed and in force."[37]

---

[32] 15 U. S. C. § 717(a). (Italics supplied throughout this paragraph.)
[33] § 7(e), 52 Stat. 825.
[34] 15 U. S. C. § 717f.
[35] *Id.*, § 717c(e).
[36] *Id.*, § 717c(b).
[37] *Id.*, § 717d(a).

In view of the Court's opinion that the Commission in administering the Act may ignore discrimination, it is interesting that in reporting this Bill both the Senate and the House Committees on Interstate Commerce pointed out that in 1934, on a nation-wide average the price of natural gas per m.c.f. was 74.6 cents for domestic use, 49.6 cents for commercial use, and 16.9 for industrial use.[38] I am not ready to think that supporters of a bill called attention to the striking fact that householders were being charged five times as much for their gas as industrial users only as a situation which the Bill would do nothing to remedy. On the other hand the Act gave to the Commission what the Court aptly describes as "broad powers of regulation."

III.

This proceeding was initiated by the Cities of Cleveland and Akron. They alleged that the price charged by Hope for natural gas "for resale to domestic, commercial and small industrial consumers in Cleveland and elsewhere is excessive, unjust, unreasonable, greatly in excess of the price charged by Hope to nonaffiliated companies at wholesale for resale to domestic, commercial and small industrial consumers, and *greatly in excess of the price charged by Hope to East Ohio for resale to certain favored industrial consumers in Ohio, and therefore is further unduly discriminatory between consumers and between classes of service*" [italics supplied]. The company answered admitting differences in prices to affiliated and nonaffiliated companies and justifying them by differences in conditions of delivery. As to the allegation that the contract price is "greatly in excess of the price charged by Hope to East Ohio for resale to certain favored industrial consumers in Ohio," Hope did not deny a price differential, but alleged that industrial gas was not sold to "favored consumers" but was sold under contracts and schedules filed with and approved by the Public Utilities Commission of Ohio, and that certain conditions of delivery made it not "unduly discriminatory."

The record shows that in 1940 Hope delivered for industrial consumption 36,523,792 m.c.f. and for domestic and commercial consumption, 50,343,652 m.c.f. I find no separate figure for domestic consumption. It served 43,767 domestic consumers directly, 511,521 through the East Ohio Gas Company, and 154,043

[38] Sen. Rep. No. 1162, 75th Cong., 1st Sess. 2.

through the Peoples Natural Gas Company, both affiliates owned by the same parent. Its special contracts for industrial consumption, so far as appear, are confined to about a dozen big industries.

Hope is responsible for such discrimination as exists in favor of these few industrial consumers. It controls both the resale price and use of industrial gas by virtue of the very interstate sales contracts over which the Commission is exercising its jurisdiction.

Hope's contract with East Ohio Company is an example. Hope agrees to deliver, and the Ohio Company to take, "(a) all natural gas requisite for the supply of the domestic consumers of the Ohio Company; (b) such amounts of natural gas as may be requisite to fulfill contracts made with the consent and approval of the Hope Company by the Ohio Company, or companies which it supplies with natural gas, for the sale of gas upon special terms and conditions for manufacturing purposes." The Ohio company is required to read domestic customers' meters once a month and meters of industrial customers daily and to furnish all meter readings to Hope. The Hope Company is to have access to meters of all consumers and to all of the Ohio Company's accounts. The domestic consumers of the Ohio Company are to be fully supplied in preference to consumers purchasing for manufacturing purposes and "Hope Company can be required to supply gas to be used for manufacturing purposes only where the same is sold under special contracts which have first been submitted to and approved in writing by the Hope Company and which expressly provide that natural gas will be supplied thereunder only in so far as the same is not necessary to meet the requirements of domestic consumers supplied through pipe lines of the Ohio Company." This basic contract was supplemented from time to time, chiefly as to price. The last amendment was in a letter from Hope to East Ohio in 1937. It contained a special discount on industrial gas and a schedule of special industrial contracts, Hope reserving the right to make eliminations therefrom and agreeing that others might be added from time to time with its approval in writing. It said, "It is believed that the price concessions contained in this letter, *while not based on our costs*, are, under certain conditions, to our mutual advantage in main-

taining and building up the volumes of gas sold by us [italics supplied]."[39]

The Commission took no note of the charges of discrimination and made no disposition of the issue tendered on this point. It ordered a flat reduction in the price per m.c.f. of all gas delivered by Hope in interstate commerce. It made no limitation, condition, or provision as to what classes of consumers should get the benefit of the reduction. While the cities have accepted and are defending the reduction, it is my view that the discrimination of which they have complained is perpetuated and increased by the order of the Commission and that it violates the Act in so doing.

The Commission's opinion aptly characterizes its entire objective by saying that "bona fide investment figures now become all-important in the regulation of rates." It should be noted that the all-importance of this theory is not the result of any instruction from Congress. When the Bill to regulate gas was first before Congress it contained the following: "In determining just and reasonable rates the Commission shall fix such rate as will allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question." H. R. 5423, 74th Cong., 1st Sess. Title III, § 312(e). Congress rejected this language. See H. R. 5423, § 213[211(e)], and H. R. Rep. No. 1318, 74th Cong., 1st Sess. 30.

The Commission contends nevertheless that the "all important" formula for finding a rate base is that of prudent investment. But it excluded from the investment base an amount actually and admittedly invested of some $17,000,000. It did so be-

[39] The list of East Ohio Gas Company's special industrial contracts thus expressly under Hope's control and their demands are as follows:

| *Customer* | *Ordinary Daily Requirements.* |
|---|---|
| Republic Steel Corporation | 15,000,000 cu. ft. |
| Otis Steel Company | 10,000,000 |
| Timken Roller Bearing Co. | 7,500,000 |
| Youngstown Sheet & Tube Co. | 7,000,000 |
| U. S. Steel Corp.—Subsidiaries | 6,500,000 |
| General Electric Company | 2,500,000 |
| Pittsburgh Plate Glass Co. | 2,000,000 |
| Niles Rolling Mill Company | 1,500,000 |
| Chase Brass & Copper Company | 700,000 |
| U. S. Aluminum Company | 400,000 |
| Mahoning Valley Steel Company | 400,000 |
| Babcock & Wilcox Company | 400,000 |
| Canton Stamping & Enameling Co. | 350,000 |

cause it says that the Company recouped these expenditures from customers before the days of regulation from earnings above a fair return. But it would not apply all of such "excess earnings" to reduce the rate base as one of the Commissioners suggested. The reason for applying excess earnings to reduce the investment base roughly from $69,000,000 to $52,000,000 but refusing to apply them to reduce it from that to some $18,000,000 is not found in a difference in the character of the earnings or in their reinvestment. The reason assigned is a difference in bookkeeping treatment many years before the Company was subject to regulation. The $17,000,000, reinvested chiefly in well drilling, was treated on the books as expense. (The Commission now requires that drilling costs be carried to capital account.) The allowed rate base thus actually was determined by the Company's bookkeeping, not its investment. This attributes a significance to formal classification in account keeping that seems inconsistent with rational rate regulation.[40] Of course, the Commission would not and should not allow a rate base to be inflated by bookkeeping which had improperly capitalized expenses. I have doubts about resting public regulation upon any rule that is to be used or not depending on which side it favors.

The Company on the other hand, has not put its gas fields into its calculations on the present-value basis, although that, it contends, is the only lawful rule for finding a rate base. To do so would result in a rate higher than it has charged or proposes as a matter of good business to charge.

---

[40] To make a fetish of mere accounting is to shield from examination the deeper causes, forces, movements, and conditions which should govern rates. Even as a recording of current transactions, bookkeeping is hardly an exact science. As a representation of the condition and trend of a business, it uses symbols of certainty to express values that actually are in constant flux. It may be said that in commercial or investment banking or any business extending credit success depends on knowing what not to believe in accounting. Few concerns go into bankruptcy or reorganization whose books do not show them solvent and often even profitable. If one cannot rely on accountancy accurately to disclose past or current conditions of a business, the fallacy of using it as a sole guide to future price policy ought to be apparent. However, our quest for certitude is so ardent that we pay an irrational reverence to a technique which uses symbols of certainty, even though experience again and again warns us that they are delusive. Few writers have ventured to challenge this American idolatry, but see Hamilton, Cost as a Standard for Price, 4 Law and Contemporary Problems 321, 323-25. He observes that "As the apostle would put it, accountancy is all things to all men, . . . Its purpose determines the character of a system of accounts." He analyzes the hypothetical character of accounting and says "It was no eternal mold for pecuniary verities handed down from on high. It was—like logic or al-

The case before us demonstrates the lack of rational relationship between conventional rate-base formulas and natural gas production and the extremities to which regulating bodies are brought by the effort to rationalize them. The Commission and the Company each stands on a different theory, and neither ventures to carry its theory to logical conclusion as applied to gas fields.

IV.

This order is under judicial review not because we interpose constitutional theories between a State and the business it seeks to regulate, but because Congress put upon the federal courts a duty toward administration of a new federal regulatory Act. If we are to hold that a given rate is reasonable just because the Commission has said it was reasonable, review becomes a costly, time-consuming pageant of no practical value to anyone. If on the other hand we are to bring judgment of our own to the task, we should for the guidance of the regulators and the regulated reveal something of the philosophy, be it legal or economic or social, which guides us. We need not be slaves to a formula but unless we can point out a rational way of reaching our conclusions they can only be accepted as resting on intuition or predilection. I must admit that I possess no instinct by which to know the "reasonable" from the "unreasonable" in prices and must seek some conscious design for decision.

The Court sustains this order as reasonable, but what makes it so or what could possibly make it otherwise, I cannot learn. It holds that: "it is the result reached not the method employed which is controlling"; "the fact that the method employed to reach that result may contain infirmities is not then important" and it

---

gebra, or the device of analogy in the law—an ingenious contrivance of the human mind to serve a limited and practical purpose." "Accountancy is far from being a pecuniary expression of all that is industrial reality. It is an instrument, highly selective in its application, in the service of the institution of money making." As to capital account he observes "In an enterprise in lusty competition with others of its kind, survival is the thing and the system of accounts has its focus in solvency. . . . Accordingly depreciation, obsolescence, and other factors which carry no immediate threat are matters of lesser concern and the capital account is likely to be regarded as a secondary phenomenon. . . . But in an enterprise, such as a public utility, where continued survival seems assured, solvency is likely to be taken for granted. . . . A persistent and ingenious attention is likely to be directed not so much to securing the upkeep of the physical property as to making it certain that capitalization fails in not one whit to give full recognition to every item that should go into the account."

is not "important to this case to determine the various permissible ways in which any rate base on which the return is computed might be arrived at." The Court does lean somewhat on considerations of capitalization and dividend history and requirements for dividends on outstanding stock. But I can give no real weight to that for it is generally and I think deservedly in discredit as any guide in rate cases.[41]

Our books already contain so much talk of methods of rationalizing rates that we must appear ambiguous if we announce results without our working methods. We are confronted with regulation of a unique type of enterprise which I think requires considered rejection of much conventional utility doctrine and adoption of concepts of "just and reasonable" rates and practices and of the "public interest" that will take account of the peculiarities of the business.

The Court rejects the suggestions of this opinion. It says that the Committees in reporting the bill which became the Act said it provided "for regulation along recognized and more or less standardized lines" and that there was "nothing novel in its provisions." So saying it sustains a rate calculated on a novel variation of a rate base theory which itself had at the time of enactment of the legislation been recognized only in dissenting opinions. Our difference seems to be between unconscious innovation,[42] and the purposeful and deliberate innovation I would make to meet the necessities of regulating the industry before us.

Hope's business has two components of quite divergent character. One, while not a conventional common-carrier undertaking, is essentially a transportation enterprise consisting of conveying gas from where it is produced to point of delivery to the buyer. This is a relatively routine operation not differing substantially from many other utility operations. The service is produced by an investment in compression and transmission facilities. Its risks are those of investing in a tested means of conveying a discovered supply of gas to a known market. A rate

41 See 2 Bonbright, Valuation of Property (1937) 1112.

42 Bonbright says, " . . . the vice of traditional law lies, not in its adoption of excessively rigid concepts of value and rules of valuation, but rather in its tendency to permit shifts in meaning that are inept, or else that are ill-defined because the judges that make them will not openly admit that they are doing so." *Id.*, 1170.

base calculated on the prudent investment formula would seem a reasonably satisfactory measure for fixing a return from that branch of the business whose service is roughly proportionate to the capital invested. But it has other consequences which must not be overlooked. It gives marketability and hence "value" to gas owned by the company and gives the pipeline company a large power over the marketability and hence "value" of the production of others.

The other part of the business—to reduce to possession an adequate supply of natural gas—is of opposite character, being more erratic and irregular and unpredictable in relation to investment than any phase of any other utility business. A thousand feet of gas captured and severed from real estate for delivery to consumers is recognized under our law as property of much the same nature as a ton of coal, a barrel of oil, or a yard of sand. The value to be allowed for it is the real battleground between the investor and consumer. It is from this part of the business that the chief difference between the parties as to a proper rate base arises.

Is it necessary to a "reasonable" price for gas that it be anchored to a rate base of any kind? Why did courts in the first place begin valuing "rate bases" in order to "value" something else? The method came into vogue in fixing rates for transportation service which the public obtained from common carriers. The public received none of the carriers' physical property but did make some use of it. The carriage was often a monopoly so there were no open market criteria as to reasonableness. The "value" or "cost" of what was put to use in the service by the carrier was not a remote or irrelevant consideration in making such rates. Moreover the difficulty of appraising an intangible service was thought to be simplified if it could be related to physical property which was visible and measurable and the items of which might have market value. The court hoped to reason from the known to the unknown. But gas fields turn this method topsy turvy. Gas itself is tangible, possessible, and does have a market and a price in the field. The value of the rate base is more elusive than that of gas. It consists of intangibles—leaseholds and freeholds—operated and unoperated—of little use in themselves except as rights to reach and capture gas. Their value lies almost wholly in predictions of discovery, and of price of gas when captured.

and bears little relation to cost of tools and supplies and labor to develop it. Gas is what Hope sells and it can be directly priced more reasonably and easily and accurately than the components of a rate base can be valued. Hence the reason for resort to a roundabout way of rate base price fixing does not exist in the case of gas in the field.

But if found, and by whatever method found, a rate base is little help in determining reasonableness of the price of gas. Appraisal of present value of these intangible rights to pursue fugitive gas depends on the value assigned to the gas when captured. The "present fair value" rate base, generally in ill repute,[43] is not even urged by the gas company for valuing its fields.

The prudent investment theory has relative merits in fixing rates for a utility which creates its service merely by its investment. The amount and quality of service rendered by the usual utility will, at least roughly, be measured by the amount of capital it puts into the enterprise. But it has no rational application where there is no such relationship between investment and capacity to serve. There is no such relationship between investment and amount of gas produced. Let us assume that Doe and Roe each produces in West Virginia for delivery to Cleveland the same quantity of natural gas per day. Doe, however, through luck or foresight or whatever it takes, gets his gas from investing $50,000 in leases and drilling. Roe drilled poorer territory, got smaller wells, and has invested $250,000. Does anybody imagine that Roe can get or ought to get for his gas five times as much as Doe because he has spent five times as much? The service one renders to society in the gas business is measured by what he gets out of the ground, not by what he puts into it, and there is little more relation between the investment and the results than in a game of poker.

Two-thirds of the gas Hope handles it buys from about 340 independent producers. It is obvious that the principle of rate-making applied to Hope's own gas cannot be applied, and has not been applied, to the bulk of the gas Hope delivers. It is not probable that the investment of any two of these producers will bear the same ratio to their investments. The gas, however, all

[43] "The attempt to regulate rates by reference to a periodic or occasional reappraisal of the properties has now been tested long enough to confirm the worst fears of its critics. Unless its place is taken by some more promising scheme of rate control, the days of private ownership under government regulation may be numbered." 2 Bonbright, Valuation of Property (1937) 1190.

goes to the same use, has the same utilization value and the same ultimate price.

To regulate such an enterprise by undiscriminatingly transplanting any body of rate doctrine conceived and adapted to the ordinary utility business can serve the "public interest" as the Natural Gas Act requires, if at all, only by accident. Mr. Justice Brandeis, the pioneer juristic advocate of the prudent investment theory for man-made utilities, never, so far as I am able to discover, proposed its application to a natural gas case. On the other hand, dissenting in *Pennsylvania* v. *West Virginia*, he reviewed the problems of gas supply and said, "In no other field of public service regulation is the controlling body confronted with factors so baffling as in the natural gas industry; and in none is continuous supervision and control required in so high a degree." 262 U. S. 553, 621. If natural gas rates are intelligently to be regulated we must fit our legal principles to the economy of the industry and not try to fit the industry to our books.

As our decisions stand the Commission was justified in believing that it was required to proceed by the rate base method even as to gas in the field. For this reason the Court may not merely wash its hands of the method and rationale of rate making. The fact is that this Court, with no discussion of its fitness, simply transferred the rate base method to the natural gas industry. It happened in *Newark Natural Gas & Fuel Co.* v. *City of Newark, Ohio*, 242 U. S. 405 (1917), in which the company wanted 25 cents per m.c.f., and under the Fourteenth Amendment challenged the reduction to 18 cents by ordinance. This Court sustained the reduction because the court below "gave careful consideration to the questions of the value of the property at the time of the inquiry," and whether the rate "would be sufficient to provide a fair return on the value of the property." The Court said this method was "based upon principles thoroughly established by repeated decisions of this court," citing many cases, not one of which involved natural gas or a comparable wasting natural resource. Then came issues as to state power to regulate as affected by the commerce clause. *Public Utilities Commission* v. *Landon*, 249 U. S. 236 (1919); *Pennsylvania Gas Co.* v. *Public Service Commission*, 252 U. S. 23 (1920). These questions settled, the Court again was called upon in natural gas cases to consider state rate-making claimed to be invalid under the Fourteenth Amendment.

*United Fuel Gas Co.* v. *Railroad Commission of Kentucky*, 278 U. S. 300 (1929); *United Fuel Gas Company* v. *Public Service Commission of West Virginia*, 278 U. S. 322 (1929). Then, as now, the differences were "due chiefly to the difference in value ascribed by each to the gas rights and leaseholds." 278 U. S. 300, 311. No one seems to have questioned that the rate base method must be pursued and the controversy was as to what rate base must be used. Later the "value" of gas in the field was questioned in determining the amount a regulated company should be allowed to pay an affiliate therefor—a state determination also reviewed under the Fourteenth Amendment. *Dayton Power & Light Company* v. *Public Utilities Commission of Ohio*, 292 U. S. 290 (1934); *Columbus Gas & Fuel Co.* v. *Public Utilities Commission of Ohio*, 292 U. S. 398 (1934). In both cases, one of which sustained, and one of which struck down a fixed rate the Court assumed the rate base method, as the legal way of testing reasonableness of natural gas prices fixed by public authority, without examining its real relevancy to the inquiry.

Under the weight of such precedents we cannot expect the Commission to initiate economically intelligent methods of fixing gas prices. But the Court now faces a new plan of federal regulation based on the power to fix the price at which gas shall be allowed to move in interstate commerce. I should now consider whether these rules devised under the Fourteenth Amendment are the exclusive tests of a just and reasonable rate under the federal statute, inviting reargument directed to that point if necessary. As I see it now I would be prepared to hold that these rules do not apply to a natural gas case arising under the Natural Gas Act.

Such a holding would leave the Commission to fix the price of gas in the field as one would fix maximum prices of oil or milk or coal, or any other commodity. Such a price is not calculated to produce a fair return on the synthetic value of a rate base of any individual producer, and would not undertake to assure a fair return to any producer. The emphasis would shift from the producer to the product, which would be regulated with an eye to average or typical producing conditions in the field.

Such a price fixing process on economic lines would offer little temptation to the judiciary to become back seat drivers of the price fixing machine. The unfortunate effect of judicial intervention in this field is to divert the attention of those engaged in the process

from what is economically wise to what is legally permissible. It is probable that price reductions would reach economically unwise and self-defeating limits before they would reach constitutional ones. Any constitutional problems growing out of price fixing are quite different than those that have heretofore been considered to inhere in rate making. A producer would have difficulty showing the invalidity of such a fixed price so long as he voluntarily continued to sell his product in interstate commerce. Should he withdraw and other authority be invoked to compel him to part with his property, a different problem would be presented.

Allowance in a rate to compensate for gas removed from gas lands, whether fixed as of point of production or as of point of delivery, probably best can be measured by a functional test applied to the whole industry. For good or ill we depend upon private enterprise to exploit these natural resources for public consumption. The function which an allowance for gas in the field should perform for society in such circumstances is to be enough and no more than enough to induce private enterprise completely and efficiently to utilize gas resources, to acquire for public service any available gas or gas rights and to deliver gas at a rate and for uses which will be in the future as well as in the present public interest.

The Court fears that "if we are now to tell the Commission to fix the rates so as to discourage particular uses, we would indeed be injecting into a rate case a 'novel' doctrine . . . ." With due deference I suggest that there is nothing novel in the idea that any change in price of a service or commodity reacts to encourage or discourage its use. The question is not whether such consequences will or will not follow; the question is whether effects must be suffered blindly or may be intelligently selected, whether price control shall have targets at which it deliberately aims or shall be handled like a gun in the hands of one who does not know it is loaded.

We should recognize "price" for what it is—a tool, a means, an expedient. In public hands it has much the same economic effects as in private hands. Hope knew that a concession in industrial price would tend to build up its volume of sales. It used price as an expedient to that end. The Commission makes another cut in that same price but the Court thinks we should ignore the effect that it will have on exhaustion of supply. The fact

is that in natural gas regulation price must be used to reconcile the private property right society has permitted to vest in an important natural resource with the claims of society upon it—price must draw a balance between wealth and welfare.

To carry this into techniques of inquiry is the task of the Commissioner rather than of the judge, and it certainly is no task to be solved by mere bookkeeping but requires the best economic talent available. There would doubtless be inquiry into the price gas is bringing in the field, how far that price is established by arms' length bargaining and how far it may be influenced by agreements in restraint of trade or monopolistic influences. What must Hope really pay to get and to replace gas it delivers under this order? If it should get more or less than that for its own, how much and why? How far are such prices influenced by pipe line access to markets and if the consumers pay returns on the pipe lines how far should the increment they cause go to gas producers? East Ohio is itself a producer in Ohio.[44] What do Ohio authorities require Ohio consumers to pay for gas in the field? Perhaps these are reasons why the Federal Government should put West Virginia gas at lower or at higher rates. If so what are they? Should East Ohio be required to exploit its half million acres of unoperated reserve in Ohio before West Virginia resources shall be supplied on a devalued basis of which that State complains and for which she threatens measures of self keep? What is gas worth in terms of other fuels it displaces?

A price cannot be fixed without considering its effect on the production of gas. Is it an incentive to continue to exploit vast unoperated reserves? Is it conducive to deep drilling tests the result of which we may know only after trial? Will it induce bringing gas from afar to supplement or even to substitute for Appalachian gas?[45] Can it be had from distant fields as cheap or cheaper? If so, that competitive potentiality is certainly a relevant consideration. Wise regulation must also consider, as a private buyer would, what alternatives the producer has if the

[44] East Ohio itself owns natural gas rights in 550,600 acres, 518,526 of which are reserved and 32,074 operated, by 375 wells. Moody's Manual of Public Utilities (1943) 5.

[45] Hope has asked a certificate of convenience and necessity to lay 1140 miles of 22-inch pipeline from Hugoton gas fields in southwest Kansas to West Virginia to carry 285 million cu. ft. of natural gas per day. The cost was estimated at $51,000,000. Moody's Manual of Public Utilities (1943) 1760.

price is not acceptable. Hope has intrastate business and domestic and industrial customers. What can it do by way of diverting its supply to intrastate sales? What can it do by way of disposing of its operated or reserve acreage to industrial concerns or other buyers? What can West Virginia do by way of conservation laws, severance or other taxation, if the regulated rate offends? It must be borne in mind that while West Virginia was prohibited from giving her own inhabitants a priority that discriminated against interstate commerce, we have never yet held that a good faith conservation act, applicable to her own, as well as to others, is not valid. In considering alternatives, it must be noted that federal regulation is very incomplete, expressly excluding regulation of "production or gathering of natural gas," and that the only present way to get the gas seems to be to call it forth by price inducements. It is plain that there is a downward economic limit on a safe and wise price.

But there is nothing in the law which compels a commission to fix a price at that "value" which a company might give to its product by taking advantage of scarcity, or monopoly of supply. The very purpose of fixing maximum prices is to take away from the seller his opportunity to get all that otherwise the market would award him for his goods. This is a constitutional use of the power to fix maximum prices, *Block* v. *Hirsh*, 256 U. S. 135; *Marcus Brown Holding Co.* v. *Feldman*, 256 U. S. 170; *International Harvester Co.* v. *Kentucky*, 234 U. S. 216; *Highland* v. *Russell Car & Snow Plow Co.*, 279 U. S. 253, just as the fixing of minimum prices of goods in interstate commerce is constitutional although it takes away from the buyer the advantage in bargaining which market conditions would give him. *United States* v. *Darby*, 312 U. S. 100; *Mulford* v. *Smith*, 307 U. S. 38; *United States* v. *Rock Royal Co-operative, Inc.*, 307 U. S. 533; *Sunshine Anthracite Coal Co.* v. *Adkins*, 310 U. S. 381. The Commission has power to fix a price that will be both maximum and minimum and it has the incidental right, and I think the duty, to choose the economic consequences it will promote or retard in production and also more importantly in consumption, to which I now turn.

If we assume that the reduction in company revenues is warranted we then come to the question of translating the allowed return into rates for consumers or classes of consumers. Here the Commission fixed a single rate for all gas delivered irrespective of

its use despite the fact that Hope has established what amounts to two rates—a high one for domestic use and a lower one for industrial contracts.[46] The Commission can fix two prices for interstate gas as readily as one—a price for resale to domestic users and another for resale to industrial users. This is the pattern Hope itself has established in the very contracts over which the Commission is expressly given jurisdiction. Certainly the Act is broad enough to permit two prices to be fixed instead of one, if the concept of the "public interest" is not unduly narrowed.

The Commission's concept of the public interest in natural gas cases which is carried today into the Court's opinion was first announced in the opinion of the minority in the *Pipeline* case. It enumerated only two "phases of the public interest: (1) the investor interest; (2) the consumer interest," which it emphasized to the exclusion of all others. 315 U. S. 575, 606. This will do well enough in dealing with railroads or utilities supplying manufactured gas, electric power, a communications service or transportation, where utilization of facilities does not impair their future usefulness. Limitation of supply, however, brings into a natural gas case another phase of the public interest that to my mind overrides both the owner and the consumer of that interest. Both producers and industrial consumers have served their immediate private interests at the expense of the long-range public interest. The public interest, of course, requires stopping unjust enrichment of the owner. But it also requires stopping unjust impoverishment of future generations. The public interest in the use by Hope's half million domestic consumers is quite a different one from the public interest in use by a baker's dozen of industries.

Prudent price fixing it seems to me must at the very threshold determine whether any part of an allowed return shall be permitted to be realized from sales of gas for resale for industrial use. Such use does tend to level out daily and seasonal peaks of domestic demand and to some extent permits a lower charge for domestic service. But is that a wise way of making gas cheaper when, in comparison with any substitute, gas is already a cheap fuel? The interstate sales contracts provide that at times when demand is so great that there is not enough gas to go around domestic users shall first be served. Should the operation of

[46] I find little information as to the rates for industries in the record and none at all in such usual sources as Moody's Manual.

this preference await the day of actual shortage? Since the propriety of a preference seems conceded, should it not operate to prevent the coming of a shortage as well as to mitigate its effects? Should industrial use jeopardize tomorrow's service to householders any more than today's? If, however, it is decided to cheapen domestic use by resort to industrial sales, should they be limited to the few uses for which gas has special values or extend also to those who use it only because it is cheaper than competitive fuels?[47] And how much cheaper should industrial gas sell than domestic gas, and how much advantage should it have over competitive fuels? If industrial gas is to contribute at all to lowering domestic rates, should it not be made to contribute the very maximum of which it is capable, that is, should not its price be the highest at which the desired volume of sales can be realized?

If I were to answer I should say that the household rate should be the lowest that can be fixed under commercial conditions that will conserve the supply for that use. The lowest probable rate for that purpose is not likely to speed exhaustion much, for it still will be high enough to induce economy, and use for that purpose has more nearly reached the saturation point. On the other hand the demand for industrial gas at present rates already appears to be increasing. To lower further the industrial rate is merely

[47] The Federal Power Commission has touched upon the problem of conservation in connection with an application for a certificate permitting construction of a 1500-mile pipeline from southern Texas to New York City and says: "The Natural Gas Act as presently drafted does not enable the Commission to treat fully the serious implications of such a problem. The question should be raised as to whether the proposed use of natural gas would not result in displacing a less valuable fuel and create hardships in the industry already supplying the market, while at the same time rapidly depleting the country's natural-gas reserves. Although, for a period of perhaps 20 years, the natural gas could be so priced as to appear to offer an apparent saving in fuel costs, this would mean simply that social costs which must eventually be paid had been ignored.

"Careful study of the entire problem may lead to the conclusion that use of natural gas should be restricted by functions rather than by areas. Thus, it is especially adapted to space and water heating in urban homes and other buildings and to the various industrial heat processes which require concentration of heat, flexibility of control, and uniformity of results. Industrial uses to which it appears particularly adapted include the treating and annealing of metals, the operation of kilns in the ceramic, cement, and lime industries, the manufacture of glass in its various forms, and use as a raw material in the chemical industry. General use of natural gas under boilers for the production of steam is, however, under most circumstances of very questionable social economy." Twentieth Annual Report of the Federal Power Commission (1940) 79.

further to subsidize industrial consumption and speed depletion. The impact of the flat reduction of rates ordered here admittedly will be to increase the industrial advantages of gas over competing fuels and to increase its use. I think this is not, and there is no finding by the Commission that it is, in the public interest.

There is no justification in this record for the present discrimination against domestic users of gas in favor of industrial users. It is one of the evils against which the Natural Gas Act was aimed by Congress and one of the evils complained of here by Cleveland and Akron. If Hope's revenues should be cut by some $3,600,000 the whole reduction is owing to domestic users. If it be considered wise to raise part of Hope's revenues by industrial purpose sales, the utmost possible revenue should be raised from the least consumption of gas. If competitive relationships to other fuels will permit, the industrial price should be substantially advanced, not for the benefit of the Company, but the increased revenues from the advance should be applied to reduce domestic rates. For in my opinion the "public interest" requires that the great volume of gas now being put to uneconomic industrial use should either be saved for its more important future domestic use or the present domestic user should have the full benefit of its exchange value in reducing his present rates.

Of course the Commission's power directly to regulate does not extend to the fixing of rates at which the local company shall sell to consumers. Nor is such power required to accomplish the purpose. As already pointed out, the very contract the Commission is altering classifies the gas according to the purposes for which it is to be resold and provides differentials between the two classifications. It would only be necessary for the Commission to order that all gas supplied under paragraph (a) of Hope's contract with the East Ohio Company shall be at a stated price fixed to give to domestic service the entire reduction herein and any further reductions that may prove possible by increasing industrial rates. It might further provide that gas delivered under paragraph (b) of the contract for industrial purposes to those industrial customers Hope has approved in writing shall be at such other figure as might be found consistent with the public interest as herein defined. It is too late in the day to contend that the authority of a regulatory commission does not extend to a consideration of public interests which it may not

directly regulate and a conditioning of its orders for their protection. *Interstate Commerce Commission* v. ~~*Railway Express*~~, 315 U. S. 373; *United States* v. *Lowden*, 308 U. S. 225.

Whether the Commission will assert its apparently broad statutory authorization over prices and discriminations is, of course, its own affair, not ours. It is entitled to its own notion of the "public interest" and its judgment of policy must prevail. However, where there is ground for thinking that views of this Court may have constrained the Commission to accept the rate-base method of decision and a particular single formula as "all important" for a rate base, it is appropriate to make clear the reasons why I, at least, would not be so understood. The Commission is free to face up realistically to the nature and peculiarity of the resources in its control, to foster their duration in fixing price, and to consider future interests in addition to those of investors and present consumers. If we return this case it may accept or decline the proffered freedom. This problem presents the Commission an unprecedented opportunity if it will boldly make sound economic considerations, instead of legal and accounting theories, the foundation of federal policy. I would return the case to the Commission and thereby be clearly quit of what now may appear to be some responsibility for perpetrating a short-sighted pattern of natural gas regulation.
